## HOW PEARS CYCLOPAEDIA BEGAN

In 1865 a young man who was later to become one of the most remarkable figures in the history of advertising joined the already well established 'House of Pears' as a junior partner. His name was Thomas J. Barratt, and by his genius Pears advertisements became famous and Pears Soap known the world over. In many ways, Barratt was ahead of his contemporaries. He argued that posters were 'the poor man's picture gallery' and that Britain's greatest artists should be represented there. In 1886 an opportunity presented itself which he was quick to seize.

Sir John Millais, leader of the pre-Raphaelites and afterwards President of the Royal Academy, had painted the portrait of his grandson (later to become Admiral Sir William James), to which he had given the title 'Bubbles'. After being exhibited at the Royal Academy, the portrait had been sold to the *Illustrated London News* for a coloured supplement and Pears bought it for two thousand guineas to be used as an advertisement. This was a departure so new and revolutionary that it aroused considerable controversy and though at first the idea also displeased Millais, he later took great interest in the reproduction of the picture and its use as an advertisement. 'Bubbles' became the most famous poster in the country. Barratt refused many offers to purchase the painting, and to-day it hangs in the offices of A. & F. Pears at Isleworth.

Raising the standard of British commercial art was only part of a larger aim. Thomas Barratt believed in education, since he was convinced that poverty, squalor and slums were in great measure due to ignorance. The first great Education Act of 1870 had paved the way for universal and free education: the British public was fast becoming literate and eager for knowledge. Barratt, realising that the massive dictionaries and encyclopaedias of those days were far beyond the reach of the general public, decided to publish a book which would combine everyday practical information with general knowledge in one inexpensive volume. That is how Pears Cyclopaedia came to be published by A. & F. Pears, soapmakers, at the close of the 19th century. Over the years the book has grown steadily and changed as new knowledge has come to light but in general design it is the same. If, as has been said, the success of a book can be measured by the extent and duration of its influence, then Pears Cyclopaedia has been unusually successful for since 1897, as one edition succeeds another, countless copies have found their way into homes all over the world.

Thomas J. Barratt believed with equal fervour in Pears Soap and Pears Cyclopaedia as weapons in the fight against disease and ignorance. To-day the portrait of 'Bubbles' on the frontispiece serves to remind us of the link between soap and book, both unique in their different ways, both household words—a tribute to a man of vision.

## ‘BUBBLES’

*By Sir John Millais, Bt., P.R.A.*

From the original in the possession of A. & F. Pears, Limited

*The story of ‘Bubbles’ and how Pears Cyclopaedia began is on the back of this page*

# PEARS CYCLOPAEDIA

AN EVERYDAY WORK OF REFERENCE FOR THE  
HOME, SCHOOL, AND OFFICE

*Sixty-fifth Edition*

1956-57

U OF I  
LIBRARY

*Editor, L. Mary Barker, B.Sc.(LOND.)*

ASSISTED BY TEN SPECIALIST ASSOCIATE EDITORS

A. & F. PEARS LIMITED, ISLEWORTH, MIDDLESEX

*“ Soap and education are not as sudden as a massacre,  
but they are more deadly in the long run.”*

MARK TWAIN

The Editor desires to express her gratitude to  
readers of the sixty-fourth and earlier editions for  
their criticisms and suggestions. Many alterations  
and additions have been made as a consequence  
and future correspondence is welcomed

*First published 1897*

*Printed and Bound in Great Britain by Richard Clay and Company, Ltd.,  
Bungay, Suffolk*

# Plan of Volume

This work of reference is divided into sections which fall into three main groups:—

## I. THE WIDER WORLD

- Events
- Prominent People
- A Citizen's Guide
- The World of Science
- Gazetteer of the World
- Atlas of the World

## II. EVERYDAY INFORMATION

- English Dictionary
- Familiar Foreign Phrases
- Abbreviations in common use
- Classical Mythology
- General Information
- Business Dictionary and Legal Notes
- General Compendium

## III. HOME AND PERSONAL

- Medical Dictionary
- First Aid Hints
- National Health Service
- Baby Care
- Hygiene and Cosmetics
- Cookery and Household Hints
- Gardening
- Radio, Television and Radar
- Family Affairs
- Sports and Pastimes
- Poultry and Pigeons
- Domestic Pets and Birds

# Contents

## I. THE WIDER WORLD

	Pages
1. EVENTS . . . . .	9-34
Chronicle of events from the earliest times to the present day . . . . .	10
Historical Calendar . . . . .	30
Story of 1955 . . . . .	34
2. PROMINENT PEOPLE . . . . .	35-120
Lives and leading achievements of distinguished men and women of all ages and countries . . . . .	
3. A CITIZEN'S GUIDE . . . . .	121-50
Local Government . . . . .	122
Central Government . . . . .	125
Law and the Courts . . . . .	128
Industrial Relations . . . . .	130
The British Commonwealth . . . . .	134
The United Nations . . . . .	136
Western European Union . . . . .	139
Asian Changes . . . . .	142
Books and Libraries . . . . .	143
Conduct of Meetings . . . . .	143
Hints for Speakers . . . . .	146
Societies . . . . .	147
Working of the United States Government . . . . .	149
Changes in France since the War . . . . .	149
The Government (1955-56) . . . . .	150
General Election Results . . . . .	150
4. THE WORLD OF SCIENCE . . . . .	151-92
Setting out to give a very brief account of the universe as seen by modern science and discussing some practical issues arising from the present state of scientific knowledge . . . . .	
Origins and Nature of the Universe . . . . .	152
Development of Life . . . . .	162
Origins of Mind and Human Society . . . . .	174
Recent Developments and Discoveries . . . . .	185
5. GAZETTEER OF THE WORLD . . . . .	193-384
Providing a complete index to the maps and descriptions of the more important places throughout the world . . . . .	
Appendices British Commonwealth Countries . . . . .	380
Chart of sea areas used in weather forecasts . . . . .	382
Cross section of typical frontal depression . . . . .	383
World's highest mountains, longest rivers, etc. . . . .	384
6. ATLAS OF THE WORLD . . . . .	32 Plates

## II. EVERYDAY INFORMATION

1. ENGLISH DICTIONARY . . . . .	417-522
Familiar Foreign Phrases . . . . .	515
Abbreviations in common use . . . . .	518
2. CLASSICAL MYTHOLOGY . . . . .	523-34
Brief accounts of the doings of the Classic gods and heroes of ancient Greece . . . . .	
3. GENERAL INFORMATION . . . . .	535-708
Some 5,000 entries on subjects of general interest, alphabetically arranged . . . . .	
Appendices Nobel Prizewinners . . . . .	705
National Trust Properties . . . . .	707
Country Code . . . . .	708
4. BUSINESS DICTIONARY AND LEGAL NOTES . . . . .	709-32
Terms relating to trade, shipping, finance, law, etc. alphabetically arranged . . . . .	
Landlord and Tenant . . . . .	726
Husband and Wife . . . . .	728
Intestacy . . . . .	731
5. GENERAL COMPENDIUM . . . . .	733-62
A collection of useful tables and data on a variety of unrelated subjects, including :— . . . . .	
Academical Hoods, Colours of . . . . .	754
Atomic Weights . . . . .	762
Beaufort Scale of Wind Force . . . . .	752

	Pages
Calendar Information	749
China Marks	746
Chivalry, Orders of	737
Coinage, United Kingdom	738
Elements, list of	762
Exchange Rates	753
Kings and Queens of England	734
London Postal Districts	739
Mathematical Formulae	759
Morse Code	749
Persons of rank, how to address	736
Presidents of the U.S.A.	739
Proof Correcting	748
Roman Numerals	753
Royal Family	735
Russian Alphabet	753
Silver Marks	743
Standard Sizes—Papers, Boards, Books	742
Thermometer Comparisons	753
Type, Sizes and Styles	758
Weights and Measures	740

### III. HOME AND PERSONAL

1. MEDICAL	763-816
Medical Dictionary	764
First Aid Hints	804
National Health Service	806
Baby Care	810
Maternal and Child Care Services in Backward Areas of World	816
2. HYGIENE AND COSMETICS	817-34
Structure of Skin, Hair, Teeth, Nails	818
General Hygiene	820
Care of Skin, Eyes, Hair, Lips, Teeth, Hands, Nails, Feet, Legs	821
Baths, Perfumes, etc.	829
Diet	830
Glossary of Cosmetic Terms	831
3. COOKERY AND HOUSEHOLD HINTS	835-76
Cooking Equipment	836
Basic Cookery Methods	837
Pressure Cooking	841
Wines	843
Directions and Recipes for Typical Dishes	844
Reference Tables	871
Household Hints	872
4. GARDENING	877-910
Flower Cultivation	878
Rock- and Water-Gardens	889
Concrete Paths and Structures	889
Fruit	889
Vegetables	893
Gardening Calendar	904
Garden Chemistry	908
5. RADIO, TELEVISION AND RADAR	911-24
6. FAMILY AFFAIRS	925-38
Human Relations	926
House Purchase	933
Insurance of Life and Property	937
7. SPORTS AND PASTIMES	939-66
Indoor and Outdoor Games, alphabetically arranged	
8. POULTRY AND PIGEONS	967-80
Feeding, management and diseases of: Ducks—Geese—Pigeons—Poultry—Turkeys	
9. DOMESTIC PETS	981-1004
Feeding, management and diseases of: Aquarium Fish—Cage Birds—Cats—Cavies—Dogs—Ferrets—Golden Hamsters—Hedgehogs—Mice—Rabbits—Rats—Tortoises	
BRITISH WILD BIRDS	1003-04
READY RECKONER	1005-23
CALENDARS 1955-58	1024

# Index

The contents of the sections printed in bold type are alphabetically arranged, and consequently self-indexing. They are not shown here, except where it is anticipated some special difficulty in reference may arise.

Where the contents of sections are not alphabetically arranged, a table of contents will also be found on the title page of the section.

	PAGE		PAGE
Abbreviations in common use	518	Cats	989-92, 563

# Story of 1955

THE international scene changed during the year in a dramatic way, and the pattern at the end of the year could scarcely have been predicted.

First, in regard to the dominant tension between Russia and the West, there was a curve of hope in the spring and summer which descended abruptly again before the year was out. In February Marshal Bulganin had replaced Malenkov as head of the Government in Russia; and optimism grew when, next month, the way was cleared for a peace treaty with Austria. Soon after it was announced that a "Summit" Conference of the Heads of the four Governments of Russia, America, Britain, and France, such as had been suggested by Sir Winston Churchill, would take place at Geneva in the summer. Proposals for German unity, European security, and disarmament were discussed in a friendly manner. But the Conference dealt only with generalities, and it left their application to be worked out by the four Foreign Ministers in the autumn. Great disappointment was caused by the failure of the second conference to agree on any topic discussed. The story is explained in the Outline of Western European Union on page 139. Early in the year, the Paris Agreements, which brought Western Germany into N.A.T.O., were ratified; and this was quickly followed by a counterbalancing Warsaw Pact on the Soviet side. Both these developments are also explained in the Outline referred to.

Early in the year, too, a tense situation arose in the Far East when it seemed that communist China would attack the off-shore islands occupied by the Kuomintang. But, fortunately, Peking refrained from such an attack.

As the year went on the immediate centre of gravity shifted to the Middle East. Two groupings were formed there. Britain joined four countries—Turkey, Iraq, Persia, and Pakistan—in what was called the Baghdad Defence Pact, presumably against Russian aggression. The Pact met with a good deal of criticism. On the other hand, Egypt was served with arms from Russian sources and an impetus was given to the hostility to Israel shown by that country and other countries in the Middle East.

The area of trouble grew. It expanded westward to Cyprus, where there were riots over a demand for self-determination; and to North Africa, where Tunisia eventually obtained self-government and where, in Morocco, further steps were taken on the road to independence.

It is difficult to generalise about such a complicated pattern. But a cardinal feature which seemed to emerge was the poverty of millions in Asia and Africa. There was nothing new, of course, about that. What was new was the growing realisation that the peoples of those continents would not continue to endure their poverty passively; that their refusal to do so would have important political results; and a race developed between Russia and the West as to who could bring the most beneficial aid to the undeveloped countries.

Things to come took clearer shape in two fields, nuclear power and automation. The peaceful uses of atomic energy were dramatically delineated at the first full international conference on the subject at Geneva. Automation is already changing production in the United States and is a feature of Russia's next Five Year Plan.

The illness of President Eisenhower came as a shock, and the question remained undecided as to whether he would run for the Presidency again in 1956.

Another important fact from America was the fusion of the two great labour organisations—the American Federation of Labour and the Congress of Industrial Organisations—into a single federation nearly sixteen millions strong.

Sixteen new members were admitted to the United Nations, but Japan and Outer Mongolia were excluded.

At home there were important political changes. Sir Winston Churchill resigned in April with no press, owing to a printers' strike, to do justice to the occasion. Sir Anthony Eden became Prime Minister, and eight days later announced the dissolution of Parliament. The Conservatives gained 49.7 per cent. of the votes at the ensuing General Election and Labour 46.4 per cent., the Conservative majority in the Commons rising from seventeen to fifty-eight. In December Mr. Attlee resigned as Leader of the Opposition and received an earldom; and Mr. Gaitskell was elected in his place with a clear majority over Mr. Bevan and Mr. Morrison. Mr. Butler, before being succeeded by Mr. Macmillan as Chancellor of the Exchequer, introduced an autumn budget and announced a "credit squeeze" to check home consumption and maintain gold and dollar reserves. In January the Bank Rate rose from 3 to 3½ per cent. and next month rose again to 4½ per cent.

Among the controversies of the year was the subject of the death penalty. The House of Commons in February decided, upon a free vote by 245 to 214, against a suspension of the death penalty for five years. Public interest in the subject grew throughout the year.

There were three important strikes—on the railways, at the docks, and the newspaper strike already mentioned. All three were the result of an inter-union conflict. The occurrence of these strikes strengthened the view that it was not only the relations between individual unions and the T.U.C. which needed remodelling but also the relations between the unions themselves.

England enjoyed the best summer since 1911, after a long, cold winter and a cold spring. In September commercial television made its first appearance on the screen.

After a long period of Governmental pondering Cardiff was recognised as the capital of Wales.

After persistent rumours for two months from the date of her twenty-fifth birthday Princess Margaret announced that she had decided not to marry Group Captain Peter Townsend.

Records of all kinds continued to be broken. A Canberra twin-jet aircraft flew from London to New York and back in one day at an average speed of over 481 m.p.h. The new Comet III jet air liner reached Sydney from London in 24 hours 23 minutes. It completed a round-the-world flight, covering 30,000 miles in 66 hours 43 minutes.

In sport the M.C.C. retained the Ashes in their Australian tour. C. J. Chataway beat the world record for three miles, and Gordon Pirie beat Zatopek the triple Olympic champion three times in four races. Donald Campbell broke his world water-speed record at an average speed of 216.2 m.p.h.

It was scarcely a distinguished year in the Arts. Perhaps the best play was "Tiger at the Gates," by Jean Giraudoux, translated by Christopher Fry; and one of the most artistic and popular entertainments was provided by a visit to London of the Chinese National Theatre. The first "Hamlet" to be played on a Russian stage by a British company since Tsarist days opened at the Moscow Art Theatre in November. Sir Laurence Olivier produced a striking and popular film version of "Richard III," taking the title rôle.

Among the honours which gave special pleasure was the award of the Order of Merit to Dr. Albert Schweitzer; and the award of the Silver Pears Trophy for 1956 to Earl Russell, the distinguished philosopher, for his work in clarifying the possible paths to world peace.

The year dissolved in an outlook of rising prices and stiffer world economic competition; and men were wondering whether nuclear energy and automation could arrive soon enough to satisfy a global demand for better standards.

men and women of all ages and countries

# Prominent People

## A

- Abbot, George** (1562-1633), Archbishop of Canterbury in 1611, and one of the translators of the authorised version of the Bible.
- Abdul-Hamid II** (1842-1918), succeeded his brother as Sultan of Turkey, 1876, and was deposed, 1909, after a long conflict with the Young Turk party, led by Enver Pasha. An autocratic ruler and earned the names Abdul the Damned and the Red Sultan because of his ruthless cruelty.
- Abdullah ibn Husein** (1882-1951); King of Jordan; made ruler under the British mandate in 1921 and proclaimed King in 1946 when Transjordan (renamed Hashimite Kingdom of the Jordan in 1949) was created an independent state by treaty with Britain. His assassination in 1951 removed a friend of Britain and a wise and constructive statesman of the Arab world.
- A'Becket, Thomas.** (See Becket, Thomas A')
- Abel, Sir Frederick Augustus, 1st Bart., G.C.V.O., K.C.B., F.R.S.** (1827-1902). Joint inventor, with Prof. Sir James Dewar (q.v.), of cordite.
- Abelard, Peter** (1079-1142), mediæval philosopher and divine, born near Nantes, pupil of William of Champeaux, the most celebrated dialectician of the day. Unrivalled in philosophy, he acquired great popularity as a teacher and attained great scholastic glory. His romance with Héloïse, niece of Canon Fulbert, has been much written about and will be familiar to most readers. The Canon had Abelard castrated and they retired from the world, he to the monastery at St. Denis and she to a nunnery at Argenteuil. The correspondence between Abelard and Héloïse has been published. Their remains now lie in one tomb at Père la Chaise, to which they were removed after the Revolution.
- Abercrombie, Lascelles** (1881-1938), English poet and critic. Was Professor of English Literature at London University, 1929-35; Lecturer in Poetry at Queen's University, Belfast, 1931-32. Author of many noteworthy publications.
- Abercrombie, Sir (Leslie) Patrick, M.A., F.S.A., F.R.I.B.A.** (b. 1879), architect and town-planner. Brother of the above. Lever Professor of Civic Design at Liverpool, 1915-35, and Professor of Town Planning at University College, London, 1935-46. Consulted on the replanning of Plymouth, Hull, Bath, the Clyde Valley, Dublin, Addis Ababa, Colombo, and Cyprus. Produced the famous plan for Greater London, 1943.
- Aberdeen, 4th Earl of, K.G., P.C., K.T., F.R.S.** (1784-1860), distinguished statesman and diplomat. Prime Minister between 1852 and 1855 of a coalition government of Whigs and Peelites.
- Abney, Sir William de Wiveleslie, K.C.B., D.Sc., F.R.S.** (1844-1921). English chemist and physicist, who made valuable researches in photography and spectrum analysis, and contributed largely to the progress made in colour photography and colour printing.
- Abruzzi, Duke of, the Prince Luigi Amadeo Giuseppe Maria Ferdinando Francesco** (1873-1933), greatly distinguished himself by Arctic exploration. In 1899 he advanced nearer to the North Pole than any previous explorer had done, his expedition reaching 86 degrees 34 minutes N. Lat. or 20 minutes beyond Nansen's 1893-1896 achievement. C-in-C. Italian Navy, 1915-17.
- Acheson, Dean Gooderham, A.B., LL.B.** (b. 1893). U.S. Secretary of State in the Truman Administration, 1949-52.
- Acton, John Emerich Edward Dalberg, 1st Baron, K.C.V.O., D.C.L., LL.D.** (1834-1902), English historian and brilliant scholar; Professor of Modern History at Cambridge, 1895-1902.
- Adam, Robert** (1728-1792), one of four Scottish brothers, all distinguished architects. Developed a characteristic style in planning and decoration and designed many important public and private buildings and interiors. His achievements include the great aristocratic houses of Harewood, Yorks; Osterley, Middlesex; Syon, Middlesex; Kedleston, Derbyshire.
- Adams, John** (1735-1826), succeeded Washington as President of the United States, and was the first of the Republic's ambassadors to England.
- Adams, John Couch, F.R.S.** (1819-92), English mathematician and astronomer. Shared credit for discovery of the planet Neptune, 1846, with the French astronomer, Leverrier (1811-77).
- Adams, Samuel** (1722-1803), American statesman, known as the "American Cato," who worked all his life for American Independence and signed the Declaration (1776). He organised the "Boston Tea Party."
- Addams, Jane, B.A., M.A.** (1860-1935), famous American sociologist who founded Hull House, Chicago, in 1889.
- Addison, Christopher, 1st Viscount, K.G., P.C., M.D., F.R.C.S.** (1689-1951). As a Liberal was Min. of Munitions, 1916-17, and the first Min. of Health, 1919-21. After joining the Labour Party held successive Ministerial offices in 3 Labour Governments. Formerly Prof. of Anatomy in the Univ. of Sheffield.
- Addison, Joseph** (1672-1719), achieved fame both as a writer and a politician. Held many offices under various governments; contributed to the *Tatler* started by his friend Steele and with him founded the *Spectator*. His tragedy *Cato* was a brilliant success.
- Adeler, Max** (1841-1915), the famous American humorist who wrote, among other works, *Out of the Hurly Burly* (1874) and *Elbow Room*.
- Adenauer, Dr. Konrad** (b. 1876), Chairman of the Christian Democratic Union and its founder in 1945; Chancellor of the West German Federal Republic since 1949.
- Adler, Alfred** (1870-1937), Austrian physician and psychiatrist and founder of the school of individual psychology. An earlier pupil of Freud, he broke away in 1911, rejecting the emphasis on sex, and regarding man's main problem as a struggle for power to compensate for feelings of inferiority.
- Adrian, Edgar Douglas, 1st Baron, O.M., M.A., M.D., F.R.S., F.R.C.P.** (b. 1889), Prof. of Physiology, Cambridge Univ. 1937-51; Master of Trinity Coll., Cambridge 1951-; Pres. of the Royal Society 1950-55; Pres. of the British Association 1954. Nobel Prize for Medicine 1932.
- Æschylus** (525-456 B.C.), father of Greek tragic drama. Composed seventy plays and gained the prize for dramatic excellence thirteen times.
- Æsop** (b. in Greece about 620, d. 544 B.C.). His fables are the most celebrated productions of the kind.
- Aga Khan, His Highness the Aga Sultan Sir Mahomed Shah, P.C., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O.** (b. 1877), head of the Ismaili Moslems. A leading race-horse owner and winner of 2000 Guineas, Derby, and St. Leger (Triple Crown) with Bahram, 1935. Also won the Derby with Blenheim, 1930, Mahmoud, 1936, My Love (part-owned), 1948, and Tulyar, 1952.

- Agassiz, Louis Jean Rodolphe** (1807-73), Swiss-American naturalist and authority on ichthyology. He was the author of a five-volume work on *Researches on Fossil Fishes* (1833-43), and his scientific investigations into the movements of glaciers resulted in *Studies on Glaciers* (1840). His great work, *Contributions to the Natural History of the United States*, was left unfinished.
- Agate, James Evershed** (1877-1947), English dramatic critic, essayist and diarist. His numerous writings include essays on the theatre, novels, and an autobiography, *Ego*, in nine vols.
- Agricola, Cnaeus Julius** (A.D. 37-93), became Roman Consul of Britain A.D. 78. Strengthened the power of the Romans in this country, corrected many abuses, and did much to encourage trade and industry. Remained in Britain seven years.
- Agrippa, Marcus Vipsanius** (63-12 B.C.), the greatest military commander of Rome after Julius Caesar.
- Aird, Sir John, Bart.** (1833-1911), a contracting engineer of eminence, associated with the carrying out of many great undertakings in different parts of the world, the wonderful Assouan Dam, on the Nile, being one of his most remarkable achievements.
- Airy, Sir George Biddell, K.C.B., F.R.S.** (1801-1892), for many years Astronomer Royal (1835-1881) at Greenwich Observatory, where his brilliance and industry led to many important researches.
- Akbar, Jalal-ud-din Mohammed** (1542-1605), the greatest and wisest of the Mogul emperors and one of the great figures of history. He initiated economic and social reforms and succeeded in unifying his vast empire. His courts at Delhi and Agra were centres of culture and learning.
- Alanbrooke, Field-Marshal Viscount, K.G., G.C.B., O.M., G.C.V.O., D.S.O.** (b. 1883). Chief of Imperial General Staff, 1941-46; Lord Lieut. of London; Chan. Queen's Univ., Belfast.
- Alaric I** (376-410), the famous chief who led the Visigoths against the Romans, and afterwards invaded both Greece and Italy. He took Rome in 410, died the following year, and was buried with a vast treasure in the bed of the River Busento, and so that the Romans might not discover his remains, the slaves who buried him were put to death.
- Alban, St.,** who flourished in the latter part of the 3rd century, was born at Verulamium (where St. Albans now stands) and served as a soldier under Diocletian at Rome. Later he was converted to Christianity, and was for a time a renowned preacher of that religion, finally suffering martyrdom. Offa, king of the Mercians, built a monastery to his memory near Verulamium, four or five hundred years later. St. Alban's Day in the Calendar of the Roman Church is June 22nd, and in that of the Anglican Church June 17th.
- Albani, Madame** (1852-1930), stage name of Marie Louise Emma Lajeunesse, Canadian operatic soprano. Made her first appearance in England at Covent Garden in 1872 and was for many years a leading prima donna, achieving great celebrity as Elsa in *Lohengrin*.
- Albert, King of the Belgians, K.G., D.F.C.** (1875-1934), son of the Count of Flanders, succeeding his uncle, Leopold II., Dec. 17, 1909. His brave part in the war of 1914-18 won him lasting fame. Killed while mountaineering in the Ardennes.
- Albert, Prince Francis Augustus Charles Emmanuel, Consort of Queen Victoria** (1819-1861). On his marriage with the Queen in 1840 Parliament granted him an income of £30,000 a year. The prince adapted himself with considerable success to the difficulties of his position, and gradually secured the confidence and esteem of statesmen and public alike. The great Exhibition of 1851 owed much of its success to his efforts. He died of typhoid fever in December, 1861. The Albert Memorial forms a national tribute to his memory.
- Albertus Magnus, St.** (c. 1206-80) was a distinguished German philosopher, and voluminous writer on the occult sciences. Bishop of Ratisbon from 1260. His dabbings in alchemy and astrology gained him wide notoriety.
- Alciades** (c. 450-404 B.C.), treacherously killed in battle at Melissa, Phrygia, was the celebrated Athenian statesman and general, pupil and friend of Socrates.
- Alcock, Sir Walter Galpin, M.V.O., Mus. Doc., F.R.C.O.** (1861-1947), English musician, eminent both as organist and composer of church music. He played at the Coronations of King Edward VII, King George V and King George VI. Organist to Salisbury Cathedral, 1916-47, and Professor of Organ at Royal College of Music, 1893-1939. Asst. Organist at Westminster Abbey 1896-1916. Elected Chairman of Council of English Church Music, 1937.
- Alcott, Louisa May** (1832-88), leading American authoress; the charm and naturalness of her writings made her a favourite among children's authors, and her books are still read on both sides of the Atlantic. Her most famous book, *Little Women*, appeared in 1868.
- Alcuin** (735-804), scholar and ecclesiastic, was a leader of the Carolingian Renaissance. His works include poems and historical and theological writings.
- Aldred** (d. 1069), a powerful ecclesiastic of the 11th century in great favour with the Conqueror, whom he crowned. Was Bishop of Worcester (1044-60), and Archbishop of York (1060-1069).
- Alekhine, Dr. (Aliechin) Alexander** (1892-1946), world chess champion, 1927-35, 1937-46. 1937-46.
- Alembert, Jean le Rond D' (1717-1783)**, a Parisian mathematician and philosopher who achieved great eminence by his numerous scientific works, including the *Theory of the Winds* and the *Precession of the Equinoxes*.
- Alexander of Hillsborough, Viscount, P.C., C.H.** (b. 1885), Chan. of Duchy of Lancaster, 1951; Min. of Defence, 1946-50; First Lord of the Admiralty, 1929-31 and 1940-46.
- Alexander of Tunis, Field-Marshal Earl, P.C., K.G., G.C.B., G.C.M.G., D.S.O.** (b. 1891), soldier and statesman. - Commander of 1st Div. at Dunkirk; C.-in-C. Southern Command, 1940-42; G.O.C. in Burma, 1942, when he conducted a masterly retreat; C.-in-C. Middle East, 1942-43, when he was largely responsible for driving the enemy out of North Africa; C.-in-C. Allied Armies in Italy, 1944; and Supreme Allied Commander, Mediterranean, 1944-45, when he successfully led a force drawn from many different nations. Gov.-Gen. of Canada, 1946-52; Min. of Defence, 1952-54.
- Alexander, Samuel, O.M., LL.D., Litt.D.** (1859-1938), a British philosopher. Was Professor of Philosophy at the Victoria University of Manchester, 1893-1924. Author of *Moral Order and Progress*, *Art and the Material*, and many papers on philosophical subjects.
- Alexander II. of Russia** (1818-1881), succeeded his father, the Emperor Nicolas, in 1855. In 1861 he emancipated 23 millions of serfs. On March 13, 1881, was assassinated by bombs thrown beneath his carriage in St. Petersburg by nihilists.
- Alexander the Great** (356-323 B.C.), King of Macedon, succeeded his father Philip in 336 B.C., and from the first showed himself fitted for mighty military exploits. He conquered in turn the Thebans, the Persian Satraps, overthrew Darius, overran Syria and Phoenicia, possessed himself of all the cities along the Mediterranean, conquered Egypt, founded Alexandria, and finally retired upon Babylon, where he died eleven days later.
- Alexandra, Queen** (1844-1925), d. of Christian IX. of Denmark, married to the Prince of Wales (afterwards Edward VII.) on March 10, 1863. Queen from Jan. 22, 1901, to May 6, 1910.
- Alfieri, Count Vittorio** (1749-1803), the Italian poet, was the author of twenty-one tragedies and six comedies.
- Alfonso the Wise** (1221-1284), a celebrated King of Leon and Castile, founder of the legal code which became the basis of Spanish jurisprudence, a liberal patron of literature and science, particularly of astronomy; dethroned by his son Sancho in 1282.
- Alfred the Great** (849-99), king of Wessex, son of Aethelwulf; succeeded his brother as king in 871 and found himself in conflict with the Danes from the outset. After six years of unsuccessful effort he took refuge in the Isle of Athelney, but the following year defeated the Danes in great force at Edington (Ethanundun). Later, the

- Danes again invaded the country, and the rest of Alfred's reign was occupied in conflict. Besides being a great warrior he was a man of letters, a philosopher, and a very able legislator and administrator. He was buried at Winchester.
- Alington, Very Rev. Cyril Argentine, D.D.** (1872-1955), Headmaster of Shrewsbury, 1908-16, and of Eton, 1917-38, and Dean of Durham, 1934-51.
- Allbutt, Rt. Hon. Sir (Thomas) Clifford, K.C.B., M.D., F.R.S.** (1836-1925), an eminent English physician, known for his studies of nervous pathology, and as the inventor of the short clinical thermometer. Was Regius Professor of Physics at Cambridge University, 1892-1925.
- Allen, (Charles) Grant Blairfrankie** (1848-1899), better known as Grant Allen, a popular writer and novelist possessing a wide range of subjects, writing equally well on science, literature, and art, and achieving note in the field of fiction.
- Allen, Sir Hugh Percy, G.C.V.O., Mus.D.** (1869-1946). Director of the Royal College of Music, 1918-37; Professor of Music at Oxford, 1918-46.
- Allenby, Field-Marshal Viscount, G.C.B., G.C.M.G., G.C.V.O.** (1861-1936), brilliant cavalry soldier. Served on Western front, 1914-16; commanded in Palestine, 1917-18, capturing Jerusalem on December 9th, 1917. High Commissioner for Egypt, 1919-25.
- Alleyne, Edward** (1566-1628), a famous actor, contemporary of Shakespeare and founder of Dulwich College.
- Alma-Tadema, Sir Lawrence, O.M., R.A.** (1836-1912), the son of a Netherlands notary, was educated at Antwerp, and came to England in 1869, where he soon made a name for himself as a painter of classical pictures of great beauty of colour and delicate design.
- Amery, Rt. Hon. Leopold Stennett, C.H.** (1873-1955), politician, war correspondent, mountaineer, and author. Served as Sec. of State for Colonies, 1924-29, and for India and Burma, 1940-45. His works include *The Times History of the South African War*, *The Stranger of the Ulysses*, and *In the Rain and the Sun*.
- Ampère, André Marie** (1775-1836), a celebrated French mathematician who devoted himself successfully to the study of electricity and magnetism, and was the first to propound the electro-dynamic theory.
- Amundsen, Captain Roald** (1872-1928), Norwegian explorer, the first to navigate the North-west Passage and the first to reach the South Pole. Sailing in the fishing smack *Gjøa*, he negotiated the North-west Passage in the 3 years, 1903-6. In 1911 he sailed south in the *Fram* and reached the Pole on December 14th, 1911, a month before his English rival Scott. He failed to complete a flight across the North Pole in 1925, but succeeded the next year. He lost his life in the Arctic while attempting to rescue Nobile, who had crashed in the *Italia*. See also *Antarctic Exploration*, Gen. Inf.
- Anacreon** (c. 560-475 B.C.), the celebrated Greek poet whose Odes held a high place in poetic literature.
- Anaxagoras** (500-428 B.C.) was a famous Greek philosopher of the Ionic School, among whose pupils were Socrates, Pericles, and Euripides.
- Anaximander** (611-547 B.C.), a celebrated Greek philosopher. He is said to have been the first to note the obliquity of the ecliptic, invented geographical maps, and laid down the theory that the moon shone with light borrowed from the sun.
- Andersen, Hans Christian** (1805-1875), perhaps the most gifted writer of fairy tales the world has known. *Mit Lævs Eventyr* (The Story of My Life) is as interesting as his fairy tales, which include *The Ugly Duckling*, *The Little Mermaid*, *The Emperor's New Clothes*, *The Little Match-seller*. Born and died in Denmark.
- Anderson, Elizabeth Garrett, M.D.** (1836-1917), one of the first Englishwomen to enter the medical profession. Practised in London for many years. In 1908-9 was Mayor of Aldeburgh, her native town, and the first woman to be a mayor.
- Andrade, Professor E. N. da C., D.Sc., Ph.D., I.L.D., F.R.S.** (b. 1887), physicist; Dir. Royal Institution, 1950-52; Quain Professor of Physics, University of London, 1928-49; author of *The Atom and its Energy*; *Isaac Newton*.
- Andrea del Sarto** (1487-1531). This celebrated son of a Florentine tailor was one of the great Italian artists of his time, known as the "faultless painter." Most of the famous galleries of the world contain examples of his magnificent fresco and other painting, mainly dealing with religious subjects.
- Andrée, Salomon August** (1854-1897), a Swedish explorer who attempted in 1897 to reach the North Pole by balloon, but, except for a message by pigeon despatched two days after his ascent, was not heard of again until in August 1930 a Norwegian scientific expedition led by Dr. Gunnar Horn discovered the remains of the Andrée expedition on White Island. The discovery included a log-book, sketch maps and the diaries kept by Andrée. A translation of these was published in English in 1931.
- Angelico, Fra** (1387-1455), a famous Italian painter of religious subjects, mostly in the form of frescoes, of which the best examples are at Florence.
- Angell, Sir Norman** (b. 1874), a distinguished author and publicist. Was Labour M.P. for N. Bradford 1929-31. His works include *The Economic Chaos* and *The Peace Treaty* (1919), *The Great Illusion* (1910) and *The Money Game* (1928). Was awarded the Nobel prize for Peace 1933.
- Angstrom, Anders Jonas** (1814-74), Swedish physicist, whose life was devoted to the study of heat, magnetism and spectroscopy, and in all three he contributed greatly to scientific knowledge. The unit used for measuring the wavelength of light was named Angstrom in his honour.
- Anne, Queen** (1665-1714), Queen of Great Britain and Ireland from 1702 to the time of her death, was a daughter of James II., and succeeded William III., her cousin. During her reign England, in alliance with Austria, Holland, Prussia, Savoy, and Portugal, entered upon the War of the Spanish Succession. Anne's reign has been called the Augustan Age of Britain because of the many eminent men of letters who flourished during that period. She was the last of the Stuarts to occupy the British throne, and the first monarch to be styled Sovereign of Great Britain, the union between England and Scotland dating from 1707.
- Anouilh, Jean** (b. 1910), most successful contemporary playwright in France; writes in the French classical tradition of happiness, conflict, and suffering. Several plays have been translated into English, including *Roméo et Jeannette* (Fading Mansion), *Eurydice* (Point of Departure), *L'Invitation au Châteaud* (Ring Round the Moon), and he has made a number of films, including *M. Vincent* and *Pattes Blanches*.
- Anselm, St.** (1033-1109), Archbishop of Canterbury, was a native of Aosta, and succeeded Lanfranc as English Primate. He was in serious conflict with William Rufus on the question of ecclesiastical rights, and for a time suffered exile. Under Henry I. he regained power, making a compromise with that monarch which enabled him to carry on his theological work in comparative harmony. He died at Canterbury, and was canonised in 1494, his day being celebrated in the Roman Church on April 21st.
- Anson, George, 1st Baron** (1697-1762), a navigator of great eminence, whose *Voyage round the World* is still a popular book of adventure. He won many victories, obtained a peerage, rose to full Admiral's rank in the Navy, and served two terms as First Lord of the Admiralty.
- Anstey, Fred**, pseudonym of Thomas Anstey Guthrie (1856-1934), English humorist and playwright. *Vice Versa* (1882) is his best known work. His other works included *The Brass Bottle*, *The Man from Blankley's*, *The Last Load*, also translations from the works of Molière and numerous contributions to *Punch*, whose staff he joined in 1886.
- Antoninus Pius** (86-161), Emperor of Rome from A.D. 138 to 161, was the successor of Hadrian, and formed an agreeable contrast to most of the Roman Emperors, in that he endeavoured to govern more with an eye to the public well-being than his own personal pleasure. It was during his reign that the wall between the Forth and Clyde was built.
- Antonius Marcus or Mark Antony** (c. 83-30 B.C.), celebrated Roman Triumvir and General; a

- warm supporter of Caesar; but engaged in intrigues after the latter's death, and was opposed by Brutus and Cassius. His association with the Egyptian Queen Cleopatra is the subject of Shakespeare's play. Committed suicide after defeat by Octavian.
- Anthony, St. (or Anthony)** (c. 251-356), was a native of Upper Egypt, and according to his own account spent much time in conflict with the devil. He is one of the best-known saints of the Roman calendar, and his festival is on January 17th. He was believed to give relief to those who appealed to him when suffering from erysipelas, from which tradition the name St. Anthony's Fire is given to the disease.
- Apelles**, the famous Greek painter, flourished in the time of Alexander the Great, whose friendship he enjoyed. His *Aphrodite Anadyomene*, painted for the temple of Aesculapius in Cos, has been accounted the most perfect picture of antiquity.
- Appert, Nicholas** (1752-1841), sometimes known as Francois Appert, invented the method of preserving animal and vegetable foods by means of hermetically sealed cans or tins. He had no scientific training, but his painstaking work and countless experiments bore the mark of a true scientist. His revolutionary methods paved the way for the creation of a vast world industry which cans millions of tons of food a year.
- Appleton, Sir Edward Victor, G.B.E., K.C.B., D.Sc., F.R.S.** (b. 1892), physicist. From 1920 worked under Rutherford at Cambridge. His researches into the propagation of wireless waves led to a great advance in this branch of science. Awarded Nobel Prize for Physics in 1947; Pres. Brit. Ass., 1953.
- Aquinas, Thomas St.** (1225-1274), the "Father of Moral Philosophy," was a native of Southern Italy and came of a noble family. In 1243 he joined the Dominicans, and the remainder of his life was spent in religious pilgrimages and disputations. In 1263 he visited London. He left behind him numerous theological and philosophical writings of great power. He was canonised in 1323.
- Arago, Dominique François Jean** (1786-1853), a French astronomer and natural philosopher of great eminence, whose researches added much to our knowledge of electricity and magnetism. His expositions of the polarisation of light did much to advance that branch of science.
- Aram, Eugene** (1704-1759), was a schoolmaster of considerable learning, and lived at Knaresborough, in Yorkshire, from 1734 to 1745, in which latter year a friend of his, one Daniel Clark, suddenly disappeared. Soon after, Aram also quitted Knaresborough. In 1759, while Aram was teaching in a school at Lynn, a skeleton was discovered at Knaresborough, and it was declared to be that of Daniel Clark. This was denied by a man named Houseman in such a manner as to cause suspicion to fall upon him, and he was arrested, whereupon he confessed that Clark had been murdered in his presence by Aram, and that his body would be found in St. Robert's Cave. Search disclosed the actual skeleton, and Aram was also arrested, tried at York, found guilty, and executed. Lord Lytton's novel, *Eugene Aram*, and Tom Hood's dramatic poem, *The Dream of Eugene Aram*, effectively deal with the romantic story.
- Archer, Frederick James ("Fred")** (1857-1886), a favourite jockey for several years, winner of many leading races, his first Derby falling to him in 1877. Rode 2,748 winners during his turf career.
- Archer, William** (1856-1924), British author and dramatic critic who was a disciple of Ibsen, and had a large part in introducing that dramatist to the English public, and edited Ibsen's complete works in eleven volumes. His own writings include the very successful drama, *The Green Goddess*.
- Archimedes** (287-212 B.C.), a Greek geometrician and philosopher of remarkable power, to whom we are indebted for the discovery of the principles of the lever and of specific gravity, and for the invention of the famous archimedean screw.
- Argand, Aimé** (1755-1803), inventor of the lamp bearing his name, which for the first time introduced a current of air to permeate and increase the power of the flame, by using a chimney glass and circular wick. He was a Swiss physician.
- Ariosto, Ludovico** (1474-1533), the author of *Orlando Furioso*, was one of the most celebrated of the Italian poets. In addition to his famous epic he wrote many comedies, satires and poems.
- Aristeides (or Aristides)**, a Greek writer, and founder of the school of prose romance; flourished in the 2nd century B.C. His *Milesian Tales* are among the most celebrated works of fiction.
- Aristides** (530-467 B.C.) the Athenian general, was of noble descent, and first achieved fame at the battle of Marathon, 490 B.C. He was renowned no less for his valour than for his scrupulous honesty and a desire to do justice to others; hence he was surnamed "the Just."
- Aristippus** (c. 435-356 B.C.), founded the Cyrenaic school of philosophy, which taught that sensual pleasure was the only happiness. He was a native of Cyrene, in Africa, but became a pupil of Socrates, and settled in Athens.
- Aristophanes** (c. 444-c. 385 B.C.) was one of the foremost Athenian play-writers and the greatest of the Greek comic poets. He is said to have composed fifty-four plays in all. Eleven of these only have survived. They are full of satire, and deal unsparingly with the people and institutions of his time.
- Aristotle** (384-322 B.C.), the most famous of all the Greek philosophers, was a disciple of Plato, after whose death he retired from Athens, and later on undertook the education of Alexander, afterwards known as Alexander the Great. Subsequently at Athens he established the Lyceum and founded the peripatetic school of philosophy, which has had great influence upon the expansion of thought.
- Arkwright, Sir Richard** (1732-1792), was a native of Preston, and in early life a barber and travelling hairdealer. Becoming interested in mechanical problems, he set himself the task of inventing an improved cotton-spinning machine. Hargreaves' spinning-jenny was then the leading machine, but the yarn it produced could only be used for weft; it was not compact enough for warp threads. Arkwright therefore experimented until, by adopting an arrangement of rollers that moved with different velocities, he succeeded in perfecting his "spinning-frame," which successfully produced a yarn that could be used for warp as well as for weft. He took out his first patent in 1769, and, entering into partnership with Mr. Jedediah Strutt, of Derby, became a manufacturer on a large scale, in 1771 establishing the first spinning-mill worked by water-power.
- Armstrong, Lord, C.B., F.R.S.** (1810-1900), inventor of the hydraulic crane and other machinery for the better utilisation of water-power. During the Crimean War he produced his famous "Armstrong gun," the biggest that had up to that time been constructed. Later his immense works at Elswick became the chief establishment in this country for the manufacture of guns and ships of war.
- Armstrong, Anthony** (Anthony Armstrong Willis), O.B.E., M.C. (b. 1897), British novelist, playwright, and contributor to *Punch*. His many works include *Warriors at Ease*, *Ten Minute Alibi*, *The Naughty Princess*.
- Armstrong, Prof. Henry Edward, F.R.S.** (1848-1937), a distinguished English chemist who for many years was Professor of Chemistry at the City and Guild's College, South Kensington, and made extensive researches in organic and general chemistry.
- Arne, Dr. Thomas Augustine** (1710-1778), an English musical composer of considerable merit and of great popularity in his day. He composed numerous ballad operas, and at Drury Lane, Covent Garden, and Vauxhall organised the chief performances for long periods. His best-known opera was *Artaxerxes*, and his most popular songs were *Rule, Britannia!* and *Where the Bee Sucks*.
- Arnold, General of the Army Henry H.** (1886-1950), Deputy Chief of Staff and Chief of the U.S. Army Air Corps during the second world war.
- Arnold, Matthew** (1822-1888), son of Dr. Thomas

- Arnold, achieved a high reputation as poet and critic. As the propounder of the principles of "sweetness and light," as well as by his graceful verse, he secured a high place amongst the literary men of the Victorian era.
- Arnold, Thomas, D.D.** (1795-1842), headmaster of Rugby from 1828 to his death. His influence at Rugby was such as to give that institution a supreme position among English public schools. A man of intense spiritual feeling, of a sympathetic and lovable nature, yet possessed of all the necessary attributes of scholarship, he was greatly esteemed and venerated.
- Arrhenius, Prof. Svante August** (1859-1927), became Director of the Physico-chemical Dept. of the Nobel Inst., 1905. An eminent scientist, the originator of the theory of electrolytic association.
- Arrol, Sir William** (1839-1913), the well-known contractor and engineer, whose firm built the Tay, Forth, and London Tower Bridges as well as the Manchester Ship Canal. Originally a piecer in a cotton-mill, and later a working blacksmith.
- Artaxerxes** was the name borne by several ancient Persian kings, some of whom achieved great distinction. The first Artaxerxes was the son of Xerxes, and reigned from 465 B.C. for 40 years; he was succeeded by Darius II. (424-405 B.C.), who in turn was followed by Artaxerxes II., who reigned 45 years. The last to bear the name of Artaxerxes was the founder of the Sassanide dynasty, A.D. 223.
- Arthur**, a famous British chieftain and supposed king, who is stated to have flourished in the 6th century, and around whose life many beautiful legends have been written, including Lord Tennyson's *Idylls of the King*.
- Arundel, Thomas, Archbishop of Canterbury** (1353-1414), in the reigns of Richard II. and Henry II., previously Bishop of Ely and Archbishop of York, and for a time Lord Chancellor. An active politician and bitter enemy of heresy.
- Ashfield, Lord, P.C.** (1874-1948), President Board of Trade, 1916-19; M.P. Ashton-under-Lyne, 1916-20; appointed first Chairman of the London Passenger Transport Board created in 1933.
- Aske, Robert**, the leader of the Pilgrimage of Grace, directed against the Reformation; executed 1537.
- Asoka** (273-232 B.C.), Emperor of India (c. 255-c. 237 B.C.), and the most powerful ruler of his time, his Empire extending from the Himalayas to what is now Madras. He was the first ruler to embrace Buddhism and accord it recognition. Becoming a Buddhist (c. 257 B.C.) he turned aside in disgust from the thought of his earlier military conquests, and attempted by missionary propaganda to spread Buddhism throughout his lands. There are some 35 valuable and interesting inscriptions on rocks and pillars, etc., mainly of religious or moral import. He gave great impetus to Buddhism by organising it as the state religion.
- Asquith, Herbert Henry**, 1st Earl of Oxford and Asquith (1852-1928), Liberal statesman; Home Sec. in Gladstone's 1892-95 government; Chancellor of the Exchequer in Campbell-Bannerman's government; introduced first provision for old-age pensions and succeeded as Prime Minister in 1908, which he held till 1916. Resigned leadership of Liberal Party in 1926. His second wife, Margot Asquith, a witty and brilliant society woman, died in 1945.
- Asser**, a Welsh monk of the tenth century, author of a remarkable life of King Alfred.
- Astor, John Jacob** (1763-1848), the founder of the Astor family of millionaires, was a native of Heidelberg, and emigrating to America, went out to the North-West and began trading in furs, soon building up a large fortune, which he wisely invested in New York real estate, which rapidly increased in value.
- Astor, Nancy Witcher, Viscountess, C.H.** (b. 1879), widow of the 2nd Viscount Astor (1879-1952). First woman M.P. to take her seat in the House of Commons, an American by birth.
- Ataturk, Kemal** (1881-1938), builder of modern Turkey. A fine soldier, he defended the Dardanelles against the British in 1915 and drove the Greeks out of Turkey in 1922. President of the Turkish Republic, and virtually dictator 1923-38.
- Athanasius, St.** (296-373), was Bishop of Alexandria. He spent much of his time in bitter theological controversy, and was driven from Alexandria; taking refuge in the desert, he wrote numerous letters in support of Christian doctrine, and under Julian was recalled to Alexandria. The Athanasian creed is supposed to reflect his belief.
- Athelstan** (895-940), grandson of Alfred the Great, was crowned King of England in 925, and was the first ruler of all England.
- Atherstone, William Guybon** (1813-98), South African geologist and an originator of the South African diamond industry. He drew attention to the possibility of diamonds near Kimberley and in 1867 identified a crystal found near the Vaal River, thus helping to start mining development. Was for many years a member of the Cape Parliament.
- Athlone, Earl of, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O.** (b. 1874), brother of Queen Mary, and until 1917 known as Prince Alexander of Teck, Gov.-Gen. of South Africa, 1923-31, and of Canada, 1940-46.
- Atkins, Robert** (b. 1886), Shakespearian actor and producer, primarily noted for his work in connection with the Open Air Theatre in London.
- Attila** (406-453), King of the Huns, was a warlike leader, who achieved many conquests over the Roman forces, committing great ravages and laying large tracts of country waste. He marched through Germany and Gaul, and died as he was preparing for another invasion of Italy.
- Attlee, Clement Richard**, 1st Earl, O.M., P.C. C.H. (b. 1883), Prime Minister in two successive Labour Governments, 1945-51; served as Deputy Prime Minister to Mr. Churchill, 1942-45. He was educated at Haileybury and University Coll., Oxford. Called to the Bar in 1905; tutor and lecturer in social science at the London School of Economics, 1913-23. Became Mayor of Stepney in 1919, Labour M.P. for Limehouse in 1922, and Parliamentary Leader of the Labour Party in 1935. During his Premiership the welfare society was established and the freedom and independence of India was granted. He was responsible for the system of Cabinet committee organisation. Retired in 1955 and was created an Earl. His autobiography, *As It Happened*, was published in 1954.
- Auber, Daniel François Esprit** (1782-1871), a distinguished French composer of light operas, *Masaniello*, *Fra Diavolo*, *Le Domino Noir*, etc.
- Auchinleck, Field-Marshal Sir Claude J. E., G.C.B., G.C.I.E., D.S.O.** (b. 1884), Indian Army officer who was C-in-C. Middle East, 1941-42, and the last British C-in-C. in India, 1943-46.
- Auden, Wystan Hugh** (b. 1907), influential modern poet, born in England and naturalised an American. His work includes verse plays as well as poems and he edited *The Oxford Book of Light Verse*. Succeeded C. Day Lewis as Prof. of Poetry, Oxford Univ., 1956.
- Auer, Leopold** (1845-1930), the famous Hungarian violinist and teacher of the violin, among his pupils being Mischa Elman and Jascha Heifetz. Was Professor of the violin at the St. Petersburg Conservatory for nearly fifty years (1868-1917).
- Augustine, St., of Hippo** (354-430), was born at Tagaste in Africa of a pagan father and a Christian mother, but went to Rome, and under the influence of St. Ambrose became deeply religious, writing much upon doctrinal subjects. His works include *The City of God* and *The Confessions*.
- Augustine, St.**, was the missionary monk who was sent to Britain by Gregory the Great in 597. He succeeded in converting King Ethelbert, after which he made good progress with the people generally, and became the first Archbishop of Canterbury. He died in 604.
- Augustus, Caius Octavianus** (63 B.C.-A.D. 14), was the first Emperor of Rome, succeeded Julius Cæsar. After a triumvirate of twelve years, in which he was associated with Mark Antony and Lepidus, he became supreme ruler and for forty-five years exercised a beneficent and powerful sway. He was a devoted patron of Horace and Virgil. The Augustan Age is still held among the most memorable in the history of letters.

**Aurelius, Marcus Antoninus.** See Marcus Aurelius Antoninus.

**Auriol, Vincent** (b. 1884), French politician. Voted against surrender in 1940, was interned and escaped to London in 1943. President of the French National Assembly, 1946, and of the Fourth Republic, 1947-54.

**Aurangzib** (1618-1707), the last of the Great Moguls, Emperors of Hindustan; succeeded his father Shah Jehan in 1658 and reigned until his death. He was a ruler of ability, and greatly extended his empire by conquest, but his zeal for Mohammedanism aroused the hatred of the Hindus, and when he died the disruption of the vast Mogul territory followed rapidly.

**Austen, Jane** (1775-1817), author of *Emma*, *Mansfield Park*, *Northanger Abbey*, *Persuasion*, *Pride and Prejudice*, and *Sense and Sensibility*. Though confining herself to the personal relations of the English middle classes, she combined artistry, accuracy, imaginative power, satiric humour, sense, and genuine feeling with the ability to create a vast range of living characters, and is often considered the most perfect English novelist.

**Austin, 1st Baron, K.B.E.** (1866-1941), was the well-known English motor manufacturer. He was the pioneer of the small car—the 7-horsepower car—which he put on the market in 1921.

**Austin, Alfred** (1835-1913), was educated at London University, and in 1861 published a satire called *The Season*, which contained some vigorous verse of undoubted promise. For some years he was connected with *The Standard* as leader writer, and also wrote for the *Quarterly Review*. Between 1870 and his death some half-dozen volumes of poems were issued by him. He was appointed Laureate in 1896, after the office had been vacant four years.

**Avebury, Lord, P.C., F.R.S.** (1834-1913), banker, scientist, and politician. Best known to the world under the name he bore until 1900 of Sir John Lubbock. His writings cover a considerable field, and are marked by a keen observation of natural phenomena and animal and vegetable life. As a member of the House of Commons he had the credit of securing the statutory observance of Bank Holidays.

**Avenzoar (Ibn Zuhr)** (c. 1090-1162), a Moslem physician, born in Seville, the greatest of his time. His chief work was the *Tasir*.

**Averroës (Ibn Rushd)** (1126-98), Arab philosopher and medical writer, born in Cordova, last and most famous thinker of Moslem Spain. He studied philosophy, theology, mathematics, medicine, and jurisprudence. His greatest work was his commentaries on Aristotle. Friend of Avenzoar.

**Ayrton, William Edward, F.R.S.** (1847-1908), English physicist, who devoted himself to the study of electrical physics, and spent some years in the public service of India, and in teaching science in Japan. Was the inventor of electrical measuring instruments. His wife, Mrs. Hertha Ayrton (1854-1923), assisted him in his researches, and became known for her scientific work on the electric arc and other subjects. Was the inventor of the Ayrton anti-gas Fan, which was first used by the British Forces in 1916.

## B

**Baber or Babar (Zahir ud-din-Mahomet)** (1483-1530), founder of the Mogul dynasty which ruled Northern India for three centuries, and a descendant of Tamerlane.

**Bach, Johann Sebastian** (1685-1750). Born at Eisenach, Germany, he became one of the greatest composers in history and has been called the father of modern music. During his appointment as organist at the Thomaskirche, Leipzig, he composed all his great devotional music, including the wonderful St. Matthew and St. John Passions, and the Mass in B Minor. His incessant labour affected his eyes, and in 1749 he became totally blind.

**Bach, Karl Philipp Emanuel** (1714-88), 3rd son of the foregoing. His numerous compositions include over 200 sonatas and other solos, 52 concerti, and many songs. Was an eminent musician of his time and was largely responsible for the sonata form.

**Backhaus, Wilhelm** (b. 1884), a German pianist who made early and highly successful appearances as a virtuoso, and first appeared in London in 1901. One of the most gifted of present-day pianists, he became Professor of the Piano at the Royal College of Music, Manchester, 1905.

**Bacon, Francis, Lord Verulam, and Viscount St. Albans** (1561-1626), was one of the greatest of English philosophers and statesmen, who was Attorney-General to Elizabeth, and under James I. became Lord Chancellor. His political career was tarnished by certain acts of corruption, for which he paid the penalty, but his writings were marked by keen insight, brilliancy of language, and a depth of thought which place them in the first rank of philosophical literature. His *Novum Organum* and his *Essays* are splendid monuments of learning and wisdom.

**Bacon, Roger** (1214-1294), the Franciscan friar, was a man of remarkable gifts, of great learning and inventive power. In an age of darkness he was the first to insist on the importance of experiment and can claim the title of founder of experimental science. Optics, explosives, engines, mechanical flight came within the range of his researches. The invention of gunpowder has been attributed to him, but without adequate evidence. For a long time he was looked upon as an alchemist and sorcerer, though of late his discoveries have been more truly appreciated.

**Baden-Powell, Lt.-Gen. Lord, O.M., G.C.M.G., G.C.V.O., K.C.B.** (1857-1941), brilliant cavalry soldier, famous for his defence of Mafeking in the South African War. Founded the organisation of Boy Scouts (1908) and Girl Guides (1910) to promote good citizenship in the rising generation. Chief Scout of the World, 1921-41.

**Baer, Karl Ernst von** (1792-1876), Russian zoologist, born in Estonia and studied in Germany; he was the founder of the science of comparative embryology, and was the discoverer of the human ovum.

**Baffin, William** (1584-1622), was a distinguished navigator and explorer who, in 1616, discovered the bay which separates the north-east coast of British North America from Greenland, and bears his name.

**Bagehot, Walter** (1826-77), English economist and journalist. Editor of the *Economist*, 1860-77. Wrote three books of lasting importance, *The English Constitution*, 1867, *Physics and Politics*, 1872, and *Lombard Street*, a description of the Money Market, 1873. He was among the first to advocate the creation of Life Peers to strengthen the House of Lords.

**Bailey, Sir Abe, Bart., K.C.M.G.** (1864-1940), was a millionaire mine-owner in S. Africa, where he owned over 100,000 acres. Donor of £100,000 to the Royal Institute of International Affairs, of which he was an active supporter. Born near Keighley, Yorkshire; fought in the Boer War with the South African Light Horse, which force he largely helped to finance.

**Baird, John Logie** (1888-1946), Scottish television pioneer; inventor of the television and the noctovisor.

**Baker, Sir Benjamin, K.C.B., K.C.M.G., F.R.S.** (1840-1907), an eminent engineer. He was consulting engineer to the Egyptian Government for the Assouan Dam, joint engineer with Sir John Fowler of the Forth Bridge, and engineer of the Central London Tube Railway.

**Baker, Sir Herbert, K.C.I.E., E.A.** (1862-1946) was an eminent architect who designed the Bank of England, Rhodes House, Oxford, and, with the late Sir E. Lutyens, New Delhi.

**Bakst, Leon** (1868-1924), a famous Russian painter and scene—and costume—designer who designed settings for Greek tragedies and after 1908 increased his fame by painting scenery and designing costumes for the Russian Ballet of Serge Diaghilev (q.v.). From 1909 until his death he lived in Paris. Examples of his paintings are in the Victoria and Albert Museum, London, and the Metropolitan Museum, New York.

**Balboa, Vasco Nunez de** (1475-1517), Spanish explorer, who was the first European to set eyes upon the Pacific Ocean. As a discoverer he ranks second only to Columbus.

**Baldwin of Bewdley, 1st Earl, K.G., P.C.** (1867-

- 1947) (as Mr. Stanley Baldwin) was the leading Conservative politician between the two world wars and Prime Minister, 1923-24, 1924-29, and 1935-37. Author of *On England and Service of Our Lives*.
- Balfour, Earl of, K.G., P.C., O.M., F.R.S.** (1848-1930). (Better known as Rt. Hon. Arthur James Balfour.) Statesman, scholar, and philosopher. Became a Conservative M.P. in 1874 and was Prime Minister, 1902-05. In the course of his distinguished career was also Chief Secretary for Ireland, First Lord of the Admiralty, Foreign Secretary, and Lord President of the Council. Author of the Balfour Declaration on Palestine.
- Baliol, John de**, whose widow in 1269 founded the college at Oxford which bears his name. Fought for Henry III. against Simon de Montfort. Died in exile in 1269.
- Baliol, John** (1249-1315), son of the above, competed with Robert Bruce for the Scottish throne, and Edward I. decided in his favour. Only reigned four years, when Edward deposed him, committing him to the Tower, and finally banished him from the country. He retired to Normandy. His son, Edward Baliol, recovered his father's kingdom in 1332, and was upheld by Edward III. whilst very unpopular by reason of his having given up the south of Scotland to the English. He renounced his title and throne in 1356, and retired to England on an annuity.
- Ball, John** (d. 1381), English priest and a leader of the Peasants' Revolt, after which he was executed. Author of the couplet *When Adam delved, and Eve span, Who was then the gentleman?*
- Ball, Sir Robert Stawell, LL.D., F.R.S.** (1840-1913), a distinguished astronomer, mathematician and a popular lecturer.
- Balzac, Honoré de** (1799-1850), one of the greatest of French novelists, and the author of over eighty novels to which he gave the covering title of *La Comédie Humaine*, depicting the appetites and passions of the new social class born of the revolution and Napoleon.
- Bampton, John** (1689-1751), an eminent divine, who founded the Oxford Bampton Divinity lectures.
- Bancroft, Sir Squire** (1841-1926), one of the best-known actor-managers of the later Victorian period. Managed the old Prince of Wales Theatre in London, in conjunction with Marie Wilton (Lady Bancroft), for many years, producing there the popular Robertsonian comedies.
- Banks, Sir Joseph, Bt., F.R.S.** (1743-1820), was president of the Royal Society for upwards of forty years. As a naturalist he was one of the most eminent men of his time, and encouraged science in every form. When Captain Cook made his voyage to the South Seas in 1768, Sir Joseph accompanied him for the purpose of observing the transit of Venus. He left very valuable botanical collections to the British Museum.
- Bannister, Dr. Roger Gilbert, C.B.E.** (b. 1929). British athlete who set up a new world and British record for the mile at Oxford on May 6, 1954, in 3 min. 59.4 sec., the first mile ever run in under 4 min.
- Banting, Sir Frederick Grant, K.B.E., M.C., D.Sc., M.D., F.R.S.** (1891-1941), Canadian physician and discoverer of insulin. Prof. of Medical Research, Toronto University, 1923-41.
- Bantock, Sir Granville, Mus. Doc.** (1868-1946), Professor of Music at Birmingham University 1908-34; Chairman of Trinity Coll. of Music, London.
- Barbirolli, Sir John, F.R.A.M.** (b. 1899), British musician. Appointed conductor of the Hallé orchestra, 1943. Succeeded Toscanini as conductor of the New York Philharmonic Symphony Orchestra, 1937-42.
- Barbarossa** (Red Beard), name given to Frederick I (c. 1122-90), greatest of the medieval Holy Roman emperors who struggled (1159-77) to free the Empire from the domination of the Pope. The two brothers who were Barbary pirates also had this name: Uruij (c. 1482-1518) was killed by the Spaniards, and Khairuddin (c. 1482-1546) conquered Tunis for the Turks in 1534 and died in Constantinople.
- Barbusse, Henri** (1874-1935), noted French author and writer of the famous war novel *Le Feu*, which is one of the most remarkable and realistic of all war books, and portrays in a starkly vivid way the experience of the common soldier.
- Baring, The Hon. Maurice, O.B.E.** (1874-1945), English author, poet and essayist and an interesting writer on Russia.
- Barker, Dame Lillian, D.B.E.** (1874-1955), governor of the Borstal Institution for Girls at Aylesbury, 1923-35; Ass. Commissioner of Prisons, 1936-43.
- Barnardo, Dr. Thomas John** (1845-1905), the founder of the well-known homes for orphan-waifs, for some forty years devoted himself to the protection, education and advancement of destitute children.
- Barnato, Barney** (1853-97), born in London and originally named Isaac: took the name Barnato after using it as a comic turn in an East End music-hall. Emigrated to South Africa when twenty-two, and, after working in a circus and as a pedlar, made a vast fortune in diamonds and gold and became a big land-owner on the Rand. Committed suicide by jumping overboard the ship that was carrying him to England on a health cruise. His son, Woolf Barnato (1895-1948), was well-known as a racing motorist and all-round sportsman.
- Barnes, Rt. Rev. Ernest William, D.D., F.R.S.** (1874-1953), Bishop of Birmingham, 1924-53. A distinguished mathematician and both the most admired and attacked Churchman of his time. Believed in the reconciliation of religion and science. Author of a number of scientific and religious works, including *The Rise of Christianity* (1947), and the famous sermon *Should Such a Faith Offend?*
- Barnum, Phineas Taylor** (1810-1891), was America's most famous showman, and originator of Barnum and Bailey's "Greatest Show on Earth."
- Barr, Archibald, D.Sc., LL.D., F.R.S., F.R.S.E.** (1855-1931), Scottish engineer and inventor: his numerous inventions include range-finders and the optophone for enabling the blind to read books by sound. He was Prof. of Civil Engineering at Leeds and Glasgow Universities.
- Barrie, Sir James Matthew, Bt., O.M.** (1860-1937), popular Scottish author and playwright. Among his novels are *A Window in Thrums* and *The Little Minister*, while his plays include *Quality Street*, *The Admirable Crichton*, *Dear Brutus*, *Mary Rose*, *Shall We join the Ladies?* and the children's classic, *Peter Pan*. His work is clever and entertaining and is tinged with mysticism.
- Barrow, Isaac** (1630-1677), a famous divine, mathematician, Greek scholar, and tutor of Sir Isaac Newton. His "Sermons" are amongst the finest in the language.
- Barry, Sir Charles, R.A.** (1795-1860), architect of the Houses of Parliament at Westminster which took twenty years to build. Knighted in 1852, and buried in Westminster Abbey. His son:
- Barry, Sir John Wolfe Wolfe, K.C.B., F.R.S.** (1836-1918), an eminent engineer, designed and carried out some of the most prominent undertakings of the time, including Barry Dock and Tower Bridge.
- Bartok, Bela** (1881-1945), Hungarian composer and musician. Early compositions influenced by Brahms and Liszt. From an early age deeply interested in folk-song which inspired him in his researches into Hungarian and Rumanian peasant music. His compositions include string quartets, violin sonatas, concertos, orchestral music, a ballet and an opera, and a collection of over 7,000 melodies. Professor at Budapest Conservatory, 1907-12, when he retired into private life as a result of the opposition his compositions aroused.
- Bartolommeo, Fra** (1469-1517), the distinguished Florentine painter and friend of Savonarola, at whose death he became a monk.
- Bartolozzi, Francesco, R.A.** (c. 1728-1815), a Florentine engraver who came to England in 1764, and for many years was engaged upon engravings, of which he produced an enormous number, many of them of great artistic merit and highly valued by collectors to-day.
- Baruch, Bernard Mannes** (b. 1870), American economist. Assisted U.S. Government in both world wars, and in 1946 was chairman of the United Nations Atomic Energy Commission.
- Bates, Herbert Ernest** (b. 1905), novelist and short-story writer. Author of *Fair Stood the Wind for France*, *The Bride Comes to Evenaford*, *The Purple Plain*, and *Jacaranda Tree*.

**Batten, Jean Gardner, C.B.E.** (b. 1909): the famous New Zealand airwoman who made aviation history by her record solo flight from England to Australia in 1934.

**Baudelaire, Charles Pierre** (1821-67), French poet of startling originality and great sensitivity, he is best known for his book of verse *Les Fleurs du Mal*. He was also a brilliant critic, and his influence is still felt. He was inordinately attached to his mother and allowed his life to be ruined by poverty, despair, and ill-health.

**Bax, Sir Arnold Edward Trevor, K.C.V.O., F.R.C.M., F.R.A.M.** (1888-1953), Master of the King's Musick, 1942-52; Master of the Queen's Musick, 1952-53. His work included numerous piano compositions, songs, and chamber works.

**Bax, Clifford** (b. 1886), English dramatist who is the author of many plays, of which the most outstanding have been *Midsummer Madness*, *The Immortal Lady*, and *The Rose Without a Thorn*.

**Baxter, Richard** (1615-91), a great Nonconformist divine, remarkable for the ability and boldness of his writings. His *Saint's Everlasting Rest* is a masterpiece.

**Bayard, Pierre du Terrail, Chevalier de** (1475-1524), a French knight of exemplary conduct and remarkable for his chivalry. Fell at the Battle of Sessa, and was named "Le Chevalier sans peur et sans reproche."

**Baylis, Lillian Mary, C.H.** (d. 1937), manager of the Old Vic theatre from 1898 and of Sadler's Wells from 1931. Did great work for the British stage.

**Beaconsfield, Benjamin Disraeli, Earl of, K.G., P.C.** (1804-81). Son of Isaac D'Israeli (q.v.). Statesman and novelist; with Burke (q.v.) exercised most influence on Conservative political theories. His first novel, *Vivien Grey*, published when he was only twenty-one, was a brilliant success and the author was able to enter Society. *Coningsby* and *Sibyl*, published twenty years later, helped to rouse the social conscience to the evils of industrial life and of the deplorable relations existing between rich and poor (the "two nations"). Disraeli entered Parliament in 1837, but had only short periods of office before his terms as Prime Minister in 1868 and 1874-80. The second period was marked by the purchase of the Suez Canal shares, by the conferment on the Queen of the title, Empress of India, and by a diplomatic triumph at the Congress of Berlin, abroad, and by a continuation of measures for social reform, at home. He was a gifted orator, the rival and antithesis of Gladstone and the friend of Queen Victoria, who favoured his policies, honoured his wife, and called him "Dizzy."

**Beardsley, Aubrey Vincent** (1872-98), black-and-white artist, whose illustrations in the *Yellow Book* aroused much controversy.

**Beatty, 1st Earl, Admiral of the Fleet, P.C., G.C.B., O.M., G.C.V.O., D.S.O.** (1871-1936). First Sea Lord, 1919-27. From 1912 to 1916 Commander of Battle Cruiser Squadron. From Nov. 1916 to 1919 succeeded Lord Jellicoe as Admiral of the main British Fleet. On Aug. 28, 1914, fought the German fleet in the Heligoland Bight. On May 31, 1916, Lord Beatty with his battle cruisers was engaged in a great sea fight with the Germans off Jutland, for which he was granted £100,000 and an Earldom in 1919.

**Beaumont, Francis** (1584-1616), and Fletcher, John (1579-1625), joint authors of many plays, including *The Maid's Tragedy* and *Philaster*. Beaumont was buried in Westminster Abbey, and Fletcher interred in St. Saviour's, Southwark. Thought by some to be authors of plays attributed to Shakespeare.

**Beaverbrook, Lord, P.C.** (b. 1879) (William Maxwell Aitken), British newspaper proprietor and politician. A Canadian by birth and a man of tremendous energy and will-power, who rendered great service as Minister of Aircraft Production in the crucial years, 1940-41. His papers have sponsored various political campaigns, notably the Empire Free Trade Movement, and have achieved a very large circulation.

**Becket, Thomas A'** (1118-1170), Archbishop of Canterbury under Henry II. A powerful and ambitious prelate who boldly supported the authority of the Pope against the dictates of the King, and was assassinated in Canterbury Cathedral December 29th, 1170, being canonised two years later.

**Bequerel, Antoine Henri** (1852-1908), French physicist who in 1896 discovered radio-activity in uranium. Shared with the Curies the 1903 Nobel Prize in Physics.

**Bede, "The Venerable"** (673-735), a monk of great influence and ability whose historical works cover a great range and are valuable in the outline they give of the early history of this country.

**Beecham, Sir Thomas, Bt.** (b. 1879), conductor and impresario. Founded the London Philharmonic Orchestra in 1931; introduced into England the operas of Richard Strauss, Russian operas, and the Diaghilev ballet; championed the music of Delius. Recognised as one of the world's great conductors, especially in the interpretation of Mozart and Wagner. Conductor of the Royal Philharmonic Orchestra since 1946.

**Beecher, Henry Ward** (1813-1887), an eminent American preacher and lecturer, whose church at Brooklyn was for many years the most popular in the United States. Brother of Mrs. H. B. Stowe.

**Beerbohm, Sir Max** (b. 1872), brilliant critic and caricaturist who contributed to the *Saturday Review* during his "twelve years' bondage to dramatic criticism" (1898-1910).

**Beethoven, Ludwig van** (1770-1827), one of the world's greatest musicians and composers, born at Bonn of a poor but musical family, his father being a tenor singer in the service of the electoral prince at Bonn. As a child he was already remarkable for his playing of the harpsichord and violin and for his power of extemporization. Some of his compositions, sonatas, songs and pianoforte variations were published when he was only 13. At 17 he visited Vienna and played before Mozart who promptly recognised his genius. When he was about 30 he began to suffer from the worst malady that could possibly have befallen him; he became deaf. He faced his fate with indomitable courage and perhaps more than any other artist continued to develop until he reached the loftiest pinnacle of musical fame. Between the years 1805 and 1808, Beethoven composed some of his greatest works: the oratorio *Mount of Olives*, the opera *Fidelio*, and the *Pastorale* and *Eroica* symphonies besides a number of concertos, sonatas and songs. He composed four overtures to *Fidelio* at different periods: *Leonore No. 2* (1805), *Leonore No. 3* (1806), *Leonore No. 1* (1807) and *Fidelio* (1814). The *Mass in C* was first performed in 1810 and the *Mass in D* was written between the years 1819 and 1822. The symphonies, nine in number, rank as the greatest ever written and the pianoforte sonatas and string quartets are unequalled in beauty. He died at Vienna at the age of 56.

**Behring, Emil von** (1854-1917), German bacteriologist and father of the science of immunology. Awarded Nobel Prize in 1901.

**Behring, Vitus** (1680-1741), Danish navigator who entered the Russian service and in 1728 discovered Behring's Strait, afterwards being wrecked on Behring's Island, where he died.

**Belisarius** (505-565), famous Roman general under Justinian. His defeats of the Goths and Vandals, and of the Persians were great achievements.

**Bell, Alexander Graham, LL.D., Ph.D., D.Sc., M.D.** (1847-1922), born in Edinburgh, went to America in 1870, became Professor of Physiology in Boston University. In 1876 exhibited an invention which was developed into the telephone. Invented the photophone, and devoted much attention to the education of deaf-mutes.

**Bell, Sir Charles** (1774-1842), an eminent anatomist to whom we owe the discovery of the distinct functions of the sensory and motor nerves. His Bridgewater treatise on the Hand is well known.

**Bell, Gertrude Margaret Lowthian, C.B.E.** (1868-1926), the "uncrowned Queen of Arabia," was a famous traveller in the East, especially in Arabia. Was an authority on Asia Minor and Iran and an associate of "Lawrence of Arabia" during the Great War.

**Bellamy, Edward** (1850-1898), American journalist and author of *Looking Backward*, a utopian novel in which he foretells of many changes that have since come to pass.

**Bellini, Gentile** (c. 1429-1507), a celebrated Venetian painter, whose "Preaching of St. Mark

- at Alexandria," in St. Mark's College, Venice, is one of the renowned pictures of the world.
- Bellini, Giovanni** (c. 1430-1516), brother of the last-named, and a more celebrated painter.
- Bellini, Vincenzo** (1802-1835), an Italian operatic composer of great popularity during the first half of the 19th century. His *I.a Sonnambula*, *Norma*, and *I Puritani*, are still performed.
- Belloe, (Joseph) Hilaire (Pierre)** (1870-1953), a writer of great versatility whose works include *The Bad Child's Book of Beasts*, *The Path to Rome*, *Hills and the Sea*, *Cautionary Tales*, and historical studies of Danton, Robespierre and Richelieu.
- Belzoni, Giovanni Battista** (1778-1823), a renowned explorer of Egypt who settled in England at the beginning of the 19th century. After a precarious existence began to turn his attention to hydraulic experiments, and went to Egypt with a view to getting the Government to sanction a scheme of his for raising the water of the Nile. He was then attracted to the study of Egyptian antiquities, and engaged in highly successful researches.
- Benedict, St.** (480-544), built twelve monasteries, and founded the Order of the Benedictine Monks, at Monte Cassino, near Naples.
- Benes, Dr. Eduard** (1884-1948), Czechoslovak statesman, co-founder with Thomas Masaryk of the Czech republic, Foreign Minister, 1918-35, and President 1935-38 and 1940-48. An all-party ministry was overthrown by a communist coup d'état in February 1948, and Benes, in failing health, resigned the Presidency in June, dying in September.
- Benavente y Martinez, Jacinto** (1866-1954), one of the greatest of Spanish dramatists. Author of *Los Intereses Creados* and other famous plays. Nobel Prizewinner, 1922.
- Ben-Gurion, David** (b. 1886), Zionist leader. Educated at Istanbul University. Helped to organise the Jewish Legion in 1918, and was prominently connected with the Labour movement in Palestine in between the world wars. Prime Minister of Israel, 1948.
- Bennett, Enoch Arnold** (1867-1931), author and journalist. His stories of the Pottery Towns, where he was brought up, are of high merit. *The Old Wives' Tales*, *Clayhanger*, and *Hilda Lessways* are among his most successful novels. He also wrote plays, including *Milestones*, *The Great Adventure*, and *Mr. Prohack*.
- Bennett, James Gordon** (1841-1918), proprietor of the *New York Herald*, and a famous yachtsman and motorist. He sent out Stanley on the expedition which resulted in the finding of Livingstone.
- Bennett, Sir William Sterndale** (1816-1875), an English composer of eminence, who did much for the advancement of musical art in this country. Schumann pronounced him to be "the most musical of all Englishmen." His Cantatas are among the best produced in England, and include *The May Queen* and *The Woman of Samaria*.
- Bentham, Jeremy** (1748-1832), the founder of the school of political philosophy, the tenets of which were extended by John Stuart Mill. His works on *Government*, *Usury*, and *The Principles of Morals and Politics*, expound the Utilitarian system with great lucidity.
- Bentley, Richard** (1602-1742), an eminent classical scholar and critic, for long Master of Trinity College, Cambridge. He was a formidable controversialist and did pioneer work in textual criticism.
- Benz, Karl** (1884-1929), German engineer whose motor car produced in 1885 was one of the first to be driven by an internal-combustion engine.
- Beranger, Jean Pierre de** (1780-1857), was the most popular song-writer that France has produced. His songs were often written to serve some passing political purpose, and were invariably in harmony with popular sentiment.
- Beresford, William Carr Beresford, Viscount** (1768-1854), British General. Participated in capture of Cape Colony and of Buenos Ayres. Reorganised Portuguese Army. Master-General of Ordnance in Wellington administration.
- Berg, Alban** (1885-1935), Austrian composer whose best known work is the three-act opera *Wozzeck*, based upon a drama by Büchner (q.v.), which has become a modern classic.
- Bergson, Henri Louis** (1859-1941), was leading French philosopher of the present century. Able exponent of the theory of vitalism and the life force. Bergson's philosophy is practical, regarding action as the supreme good and marks a modern trend in its revolt against reason. Member of French Academy 1941; Nobel Prize for Literature 1927. Author of *Matter and Memory* (1896) and *Creative Evolution* (1907).
- Berkeley, George, D.D.**, Bishop of Cloyne (1685-1753), the propounder of the philosophy that the only things that are real are our ideas of what is presented to our senses. In support of this philosophy he wrote several works of great ingenuity of argument, chief amongst them being his *Alciphron*, or the *Minute Philosopher*.
- Berlin, Irving** (b. 1888), American composer of popular songs, and the pioneer of both rag-time and jazz music; his songs including *Alexander's Rag-time Band*, *Atavacs*, *What'll I Do?* were the beginning of popular jazz.
- Berlioz, Hector** (1803-1869), was an eccentric but highly endowed French musical composer who studied in Paris and Rome, and afterwards, settling in Paris, devoted himself to conducting and composing with much energy. He suffered hardship and humiliation before he got a hearing, but his originality and his ardent romanticism fascinated such men as Paganini and Liszt, and though musical convention to a great extent prevented the realisation of his aims, he ranks as one of the truest musical geniuses of the 19th century. His *Damnation de Faust* and his *Romeo and Juliet* symphony are his most inspired productions. His wife was an English actress, Miss Smithson, for whom he formed a romantic attachment while she was appearing in Shakespearean parts in Rome.
- Bernadotte, Count Folke** (1895-1948), nephew of the late King Gustav of Sweden. As head of the Swedish Red Cross arranged for the exchange of prisoners in the second world war. In April 1945, he was the intermediary through whom Himmler attempted to capitulate. Appointed United Nations mediator for Palestine in 1947 and brought about a truce between the Arabs and Jews, but was assassinated by Jewish terrorists.
- Bernadotte, Jean Baptiste** (1764-1844), was a French commander of great distinction who served under Napoleon, and in 1810 was chosen heir to the throne of Sweden. In 1818 he succeeded as Charles XIV., and was a capable ruler.
- Bernal, John Desmond, M.A., F.R.S.** (b. 1901), Professor of Physics, Birkbeck College, 1938- . Author of *The Social Function of Science*, *Science in History*, and of many other works on scientific and social subjects, notably crystallography, poison gases, and post-war housing.
- Bernard of Menthon** (923-1008), patron saint of mountaineers. Founded the alpine hospices of Saint Bernard on the famous Great Saint Bernard Pass between Switzerland and Italy.
- Bernard, Saint, of Clairvaux** (c. 1090-1153), famous French abbot of the monastery of Clairvaux whose sermons and letters had very great influence in Western Europe.
- Bernhardt, Sarah** (1845-1923), the most renowned tragedienne of her time. Became a member of the Comédie Française after the Siege of Paris, and thereafter occupied a specially prominent position as an actress. Her first performance in London was in 1879. Among her most conspicuous successes are *Theodora*, *Fédora*, and *La Tosca*, while she also appeared as Hamlet with distinction.
- Berthelot, Marcellin Pierre Eugene** (1827-1907), French chemist and politician, and the first to produce organic compounds synthetically.
- Berzelius, Jöns Jakob** (1779-1848), Swedish chemist, whose researches laid the foundations for modern chemical science. He devised the system of chemical symbols in use today and discovered several elements.
- Bessemer, Sir Henry, F.R.S.** (1813-1898), famous for his invention of the well-known process of converting cast-iron direct into steel. His invention entirely revolutionised steel manufacture, greatly reducing the cost of production and making it possible to utilise steel in many directions where previously iron only had been used.
- Bevan, Rt. Hon. Aneurin, M.P.** (b. 1897). Minister of Health 1945-51 and responsible for intro-

- ducing the National Health Service which came into operation in 1948; Minister of Labour, Jan.-Apr. 1951. Married to a fellow Socialist M.P., Miss Jennie Lee.
- Beveridge, Lord, K.C.B.** (b. 1879). British economist. Director of the London School of Economics, 1919-37, and Master of University College, Oxford, 1937-44. Drew up the Beveridge Plan, published in 1942, which formed the basis of the present Health and Insurance Schemes.
- Bevin, Rt. Hon. Ernest, M.P.** (1881-1951). Secy. of State for Foreign Affairs 1945-51; Minister of Labour and National Service, 1940-45. A British Trade Union Leader who became prominently associated with the Dockers Union, of which he was Assistant General Secretary and of the Transport and General Workers Union of which he was still General Secretary when he entered the Coalition Government as Minister of Labour. He was Chairman of the General Council of Trades Union Congress, 1937.
- Bichat, Marie Francois Xavier** (1771-1802). French physiologist who founded the study of general anatomy, on which he wrote several important works. In one of these he showed the important connexion between the brain, heart and lungs.
- Bidault, Georges** (b. 1899). French Foreign Minister, 1953-54. Originally a professor, he became the editor of the Christian Democrat newspaper, *L'Aube*, fought for the Republicans in the Spanish civil war, and then took a leading part in the French resistance movement. Is the leader of the M.R.P. Married the only woman in the French Foreign Service, 1945.
- Biddle, John** (1615-62), the first English Unitarian. He was fined, imprisoned and banished for his publications attacking the Holy Trinity. Under a general Act of Oblivion in 1652 he resumed his teachings, which led to further imprisonment, and as a result he died of fever. He is known as the "Father" of Unitarianism.
- Binyon, (Robert) Laurence, C.H.** (1869-1943), a poet, art critic and Orientalist; Assistant Keeper of Dept. of Prints and Drawings, British Museum, 1909-13; Deputy Keeper in charge of Sub. Dept. of Oriental Prints and Drawings, 1913-32; Keeper of Prints and Drawings, 1932-33.
- Birch, (Samuel John) Lamorna, R.A.** (1869-1955). English landscape painter in oils and water-colours, well known for his charming Cornish landscapes and sea studies. His pictures are hung in all the principal galleries of England.
- Bird, Cyril Kenneth, C.B.E., B.Sc.** (*nom de plume* Fougasse) (b. 1887), humorous artist who edited *Punch* from 1948 to 1952. His witty drawings, many under the title *The Changing Face of Britain*, enlivened the pages of *Punch* for many years and the "Careless Talk Costs Lives" series of the second world war were his creation.
- Birkbeck, George** (1776-1841), physician, philanthropist, and philosopher. A Yorkshireman who settled in London in 1804, and became the chief founder of Mechanics' Institutes.
- Birkenhead, 1st Earl of, P.C., G.C.S.I.** (1872-1930). Sec. for India, 1924-1928. Lord Chancellor, 1919-1922. Attorney-General 1915 to 1919. M.P. for the Walton Divn. of Liverpool from 1906 to 1918, and West Derby Divn. thereof from Dec. 1918 to Jan. 1, 1919.
- Birkett, Rt. Hon. Sir (William) Norman, Q.C.** (b. 1883), one of the ablest and most prominent members of the English Bar. Lord of Appeal, 1950; Judge King's Bench Div. 1941-50; British Mem. (Deputy) Int. Mil. Tribunal at Nuremberg 1945-46. Was M.P. (L.) for East Nottingham, 1923-24 and 1929-31.
- Birmingham, Bishop of.** (See Barnes, Ernest W.)
- Bishop, Sir Henry Rowley** (1786-1855), composer of many popular ballad operas and songs. *Maid Marian, Guy Mannering* and *The Miller and his Men*, are his best-known operas. He was also a very successful glee-writer, and was the composer of *Home, Sweet Home*. Was the first musician to be knighted in 1842.
- Bishop, Air Marshall William Avery, V.C., C.B., D.S.O., M.C., D.F.C.** (b. 1894). Canada's greatest airman. Officially credited with the destruction of seventy-two enemy aircraft in the first world war.
- Bismarck, Prince Otto Eduard Leopold von** (1815-1898), the most prominent and capable of the German statesmen of the 19th century, entered the diplomatic service in 1851, and filled positions in succession at Vienna, Petrograd, and Paris. In 1862 he was appointed Minister of Foreign Affairs, from which time dates the strong Bismarckian policy which was destined to achieve so much for Prussia. As Imperial Chancellor he may be said to have directed the destinies of his country down to the death of the Emperor William in 1888, when Emperor William II. began to assume a direct control, which Bismarck resented, and in 1890 the "old pilot" was dropped, to use a figure of speech made memorable by one of Tenniel's cartoons. Bismarck retired to his country estates, and did not again interfere seriously in political affairs. Made Count in 1865 and Prince in 1871. Germany has over two hundred monuments to him. He presided at the famous Berlin Conference of 1878. His son, Count Herbert von Bismarck (1849-1904), was appointed German Foreign Minister in 1885, but, like his father before him, did not get on well with William II.
- Bizet, Georges** (1838-1875), a French musical composer, who gave the operatic stage several operas full of charming melody, and who in *Carmen* achieved one of the leading operatic triumphs of the latter half of the 19th century.
- Björnsen, Björnsterne** (1832-1910), the Norwegian poet, dramatist, and novelist is one of the great names in modern European literature, his poems, plays, and stories being marked by a strong intellectuality and a rich imagination.
- Black, Joseph** (1728-99), Scottish chemist. Prof. of anatomy at Glasgow (1756-60) and of medicine and chemistry at Edinburgh (1760). Specially known for discoveries of carbon dioxide (he called it "fixed air") and latent heat. His original work earned him the title father of quantitative chemistry.
- Blackett, Patrick M.S., F.R.S., M.A.** (b. 1897). Professor of Physics, Imperial College of Science and Technology, 1953; Manchester University, 1937-52. Author of *The Military and Political Consequences of Atomic Structure*, publ. 1948. Awarded Physics Nobel Prize 1948 for his work on nuclear physics and his development of the Wilson cloud chamber method of tracing tracks of swift atomic particles.
- Blackmore, Richard Doddridge** (1825-1900), a novelist who in 1869 made a great reputation with his romantic story of *Lorna Doone*.
- Blackstone, Sir William** (1723-1780), was a Justice of the Court of Common Pleas. His great work, *Commentaries on the Laws of England*, became one of the British classics.
- Blackwood, Algernon, C.B.E.** (1869-1951), British author. As a young man, farmed in Canada and worked on New York newspapers. Then, from 1906, produced a steady flow of books, plays, and short stories of high quality.
- Blair, Robert** (1699-1746), a noted Scottish poet, whose poem, *The Grave*, entitles him to a place in all collections of British poetry.
- Blake, Robert** (1599-1657), Parliamentary general and an admiral in the Cromwellian navy in the Dutch and Spanish wars.
- Blake, William** (1757-1827), painter, poet, and mystic, whose *Songs of Innocence* and scriptural drawings reveal an intense spirituality. He was a highly independent and original thinker and has been called "the great teacher of the modern western world."
- Bland-Sutton, Sir John, Bt., M.D.** (1855-1936), an eminent surgeon, whose association with the Middlesex Hospital is commemorated by the Bland-Sutton Institute of Pathology. Was an authority on diseases of women.
- Blasco-Ibanez, Vicente** (1867-1928), a Spanish man of letters who wrote *The Four Horsemen of the Apocalypse* and other novels which made him world-famous.
- Blieriot, Louis** (1872-1936), French airman; the first to fly the English Channel from Calais to Dover, July 25, 1909.
- Blind, Karl** (1826-1907), was a native of Mannheim, and in 1847 associated himself with the German revolutionary movement, but was arrested and imprisoned. Gaining his liberty, he resided in Brussels for a time, and afterwards settled in London, remaining in close touch with men like Mazzini and Louis Blanc, and by pen and speech constantly advocating political freedom.

- Bliss, Sir Arthur** (b. 1891), English composer, succeeded Sir Arnold Bax as Master of the Queen's Musick in 1953. His best known works are the *Colour Symphony* (1922), *Morning Heroes* (1930) and his ballet *Checkmate* (1937). Mus. Dir. B.B.C., 1941-44.
- Boch, Ernest** (b. 1880), composer, whose music is characterised by its Jewish and oriental themes. He was born in Geneva, Switzerland, and is a naturalised American citizen.
- Blomfield, Sir Reginald, R.A., M.A., F.S.A.** (1856-1942): was a prominent architect, designer of gardens and country houses.
- Blondin, Charles** (Jean François Gravelet) (1824-1897), a famous French rope performer, who crossed Niagara Falls on a tight-rope.
- Blücher, Field-Marshal Gebhard Leberecht von** (1742-1819), was the famous Prussian commander who, after a long and brilliant military career, joined forces with Wellington in the final campaign against Napoleon, and materially helped to win the great victory of Waterloo by advancing to Wellington's support.
- Blum, Leon** (1872-1950), statesman and architect of French socialism. Led a "popular front" government in 1936 and a "caretaker" government for a brief period 1946-47. Served as vice premier 1937-38. During 1940-45 was interned in Germany.
- Blunden, Edmund Charles** (b. 1896), English poet who was Prof. of Literature at Tokyo University 1924-27. Gained the Hawthornden Prize in 1922 for his poem *Shepherd*. Fellow and Tutor in English Literature, Merton College, Oxford, 1931-43. Prof. of Literature Hong Kong University, 1954-.
- Blunt, Wilfrid Scawen** (1840-1923), best known for the part he took in Egyptian affairs in 1881-1882 and his continued support of what is called the Egyptian national movement. He was a devoted admirer of Arabi Pasha, and spent much money in his defence. In 1907 he published his *Secret History of the English Occupation of Egypt*, which aroused much controversy. He married a granddaughter of Lord Byron.
- Boadicea**, queen of the Iceni tribe of Britons, who raised an army against and defeated the Roman invaders, but was afterwards vanquished by Suetonius and committed suicide in 62.
- Boccaccio, Giovanni** (1313-1375), an Italian author who has often been called the father of the novel. He had a lively imagination and a graceful style, and his famous *Decameron*—condemned by two Popes and by the Council of Trent—has been a fount of inspiration to poets and story-tellers from Shakespeare to Keats.
- Boccherini, Luigi** (1743-1805), Italian composer who first gained fame for his virtuosity on the violoncello. Settled in Madrid in 1769 as composer to the Chapel of the Infante, which position he held until 1785. Was appointed composer to the Court of Frederick William II. of Prussia, but returned to Spain in 1797, and died in poverty in Madrid.
- Bode, Johann Elert** (1747-1826), German astronomer remembered mainly for his law (known as Bode's Law) for the calculation of the relative distances of the planets from the sun.
- Boehm, Sir Joseph Edgar, Bt., R.A.** (1834-90), British sculptor. Executed several famous monuments and statues including that of Carlyle on the Chelsea Embankment, the monument to Dean Stanley in Westminster Abbey, Darwin in the Natural History Museum, Kensington, and the equestrian statue of the Duke of Wellington at Hyde Park Corner.
- Bohr, Niels Henrik David** (b. 1885), famous Danish physicist who has received universal recognition and fame by his experiments in atomic structure. With Lord Rutherford applied the quantum theory to the study of atomic processes. Awarded Nobel Prize for Physics, 1922.
- Boieldieu, François Adrien** (1775-1834), French composer whose masterpiece, *La Dame Blanche*, was published in 1825. Composed many works in collaboration with Cherubini and Mehul. Succeeded Mehul as Professor of Composition at the Conservatoire, Paris, in 1817.
- Bolleau-Despreaux, Nicolas** (1636-1711), a French poet who was contemporary with Molière, and wrote many classical imitations which were highly thought of in his own time and later.
- Boito, Arrigo** (1842-1918), an Italian poet and musical composer. He wrote the libretti of *Othello* and *Falstaff* for Verdi, and for his own operas of *Mefistofele* and many others.
- Boldewood, Rolf**, pseudonym of Thomas Alexander Browne (1826-1915), Australian novelist, born in London. Went with his parents to Australia in 1830, becoming a squatter and sheep-farmer in New South Wales. His classic novel *Robbery under Arms* is based on the exploits of some of the notorious Australian bushrangers.
- Boleyn, Anne** (1507-38), queen of Henry VIII and mother of Queen Elizabeth. Originally maid-in-waiting to Catharine of Aragon and her successor when Catharine's marriage was annulled. She failed to produce a male heir and was beheaded on a charge of adultery.
- Bolívar, Simon** (1783-1830), the first President of Venezuela and subsequently Dictator of Peru; commonly called the Washington of South America.
- Bonaventura, St.** (1221-1274), a Franciscan monk of great learning and piety, and a leading Schoolman. He was called "the Seraphic Doctor."
- Bondfield, Rt. Hon. Margaret Grace, C.H.** (1873-1953), Min. of Labour, 1929-31. Represented Northampton, 1923-24. Wallsend, 1926-31. First woman member of a British Cabinet.
- Bone, Sir Muirhead** (1876-1958), Scottish artist, famous for his drawings and etchings of architectural subjects. Excelled in dry-point and drawings of intricate scaffolding.
- Bonheur, Rosa** (1822-1899), a native of Bordeaux, and one of the most noted animal painters of the 19th century. *The Horse Fair* is probably the most popular picture of the kind.
- Boniface, St.** (680-754), a native of Devon, spent most of his life in Germany in Christianising missions, and became the first Archbishop of Mainz. He and a number of followers were massacred in Friesland.
- Booth, Edwin** (1833-1893), an American tragedian of great eminence; son of Junius Brutus Booth, the English tragedian, and brother of John Wilkes Booth, who assassinated President Lincoln. As a Shakespearian actor Booth took high rank and is said to have played Hamlet oftener than any other actor. He visited England several times.
- Booth, "General" William** (1829-1912), while quite a young man became a Methodist local preacher and a travelling evangelist. Founded the Salvation Army in 1878, which under his enthusiastic and eminently practical direction became an organisation of world-wide influence.
- Booth, "General" Wm. Bramwell, C.H.** (1856-1929), son and successor of the above from 1912 until deposed by the Army High Council in 1928.
- Borden, Rt. Hon. Sir Robert (Laird), G.C.M.G., K.C.** (1854-1937), Premier of Canada 1911 to 1926, leader of the Conservative party in the Canadian House of Commons 1901-1920; was the first overseas minister to attend a meeting of the British Cabinet in 1915; had a distinguished career at the Bar.
- Borgia, Cæsar** (1476-1507), the masterful and unscrupulous son of Pope Alexander VI., who paved his way to power by the murder of those who stood in his way, and aided by Louis XII. of France, became ruler of Romagna, the Marches, and Umbria. Pope Julius II. banished him from Rome, and he was imprisoned in Spain, but escaped to find a soldier's death in the Army of Navarre in the invasion of Castile.
- Borodin, Alexander Porfirievich** (1833-87), Russian composer who became Prof. of Chemistry and founded a School of Medicine for Women. One of the most important of the "new" Russian composers of the 19th century, his compositions include Symphonies, Chamber Music, and Piano pieces, also his unfinished opera, *Prince Igor*, later completed by Rimsky-Korsakov, and produced in St. Petersburg in 1890.
- Borotra, Jean** (b. 1898), famous French lawn tennis champion, known as "the bounding Basque." A popular figure at the Wimbledon championships before and after the second world war.
- Borrow, George Henry** (1803-1881), was for many years travelling agent for the British and Foreign Bible Society, and in the course of his wanderings made a special study of gipsy life, and wrote some of the most charming and picturesque books about the Romany tribes we possess. His *Lavengro*, *Romany Rye*, and *Bible in Spain* are classics.

- Bose, Sir Jagadis Chunder, C.S.I., C.I.E., F.R.S.** (1858-1937), eminent Indian scientist. Published many works on plant physiology and designed certain instruments of which the best known is the crescograph, which can magnify movement 100,000 times.
- Boswell, James (1740-1795)**, made himself famous by writing *The Life of Dr. Johnson*, spending some years in close intimacy with the great lexicographer, and producing what is probably the finest biography in the language. His own journals and letters, collected together by Yale University and published in 1949 as *The Boswell Papers*, are among the greatest literary collections ever assembled.
- Botha, General the Rt. Hon. Louis (1862-1919)**, the Boer general who succeeded Joubert in command of the Transvaal forces in the Boer War 1899-1902. On parliamentary government being granted to the Transvaal in 1907 he became the first Prime Minister, and attended the Imperial Conference in England the same year. In 1910 made first Premier of the South African Union. After the outbreak of war with Germany took the field at the head of a Union force and, in addition to putting down a rebel movement engineered by Germany, conquered a large portion of German African Territory. Took a prominent and useful part in the Peace conference of 1919.
- Botticelli, Sandro (c. 1444-1510)**, Italian painter and disciple of Savonarola, the democrat. Produced many notable pictures, and assisted in the decoration of the Sistine Chapel. His illustrations to Dante's *Divine Comedy* are world-famous.
- Bottomley, Horatio (1860-1933)**, politician, journalist, financier, and for many years one of the most notorious characters in England. A brilliant speaker, he was twice M.P. for South Hackney. Altogether 260 petitions in bankruptcy were presented against him, mostly without effect: he was constantly in the law courts, defending himself with skilful audacity against famous K.C.s. Millions of pounds passed through his hands, much of it obtained from small investors, but he died in poverty after serving seven years' penal servitude for fraud.
- Boughton, Rutland (b. 1878)**, English composer. Has written on the history and philosophy of music. Composer of *The Immortal Hour*.
- Boulanger, General George Ernest Jean Marie (1837-1891)**, was for a few years the most popular man in Paris, if not in France. Was made War Minister in 1886, and contrived by a violent attitude towards Germany and a flattery of the mob, to attract much attention. In 1888 he may be said to have dominated French politics, and many expected that he would effect a *coup d'état*, and become dictator of France; but his courage was not equal to his opportunity, and he rapidly fell out of favour and left the country in order to avoid arrest. His career was over, and in 1891 he committed suicide on the grave of a mistress in Brussels.
- Boulton, Sir Adrian C., Kt., M.A., D.Mus., F.R.C.M. (b. 1889)**. Chief conductor London Philharmonic Orchestra, 1950. Conductor of the B.B.C. Symphony Orchestra, 1930-50, and Musical Director B.B.C., 1930-42.
- Bowdler, Thomas (1754-1825)**, a pious English physician, who issued expurgated editions of Shakespeare and Gibbon, eliminating all expressions offensive to good taste. Hence the term "bowdlerise."
- Boyd Orr, John, 1st Baron, F.R.S., M.D., D.Sc. (b. 1880)**, Scientist, farmer and nutritional expert. Prof. of Agriculture, Aberdeen University, 1942-45; Director-General, World Food and Agricultural Organisation, 1945-48, now Chancellor of Glasgow University. Awarded Nobel Peace Prize, 1949.
- Boyle, Hon. Robert, F.R.S. (1627-1691)**, English physicist; invented the air pump, and established Boyle's Law which states that in a given quantity of gas at a given temperature and pressure, pressure is inversely proportional to volume. See p. 760.
- Bradley, General of the Army Omar N. (b. 1893)**, distinguished American soldier who was appointed chairman of the Joint Chiefs of Staff in succession to Gen. Eisenhower in 1949. Commanded 2nd U.S. Army Corps in Tunis and Sicily, the American Assault Forces in Normandy in 1944, and later the 12th U.S. Army Group. Retired 1953.
- Bradman, Sir Donald George (b. 1908)**, Australian cricketer and one of the world's best batsmen. Holder of world's record score of 452 not out for N.S.W. v. Queensland at Sydney, Dec. 1929. Captained Australia in Test matches against England, 1936-48.
- Bragg, Sir Wm. (Henry), O.M., K.B.E., F.R.S., M.A., D.Sc. (1862-1942)**, was a brilliant scientist. Nobel Physics Prize, 1915. Was Director of the Royal Institution of Great Britain; Fulmerian Prof. of Chemistry, Royal Institution, and Director of Davy-Faraday Research Laboratory, 1923-42; President of British Association, 1928. President of the Royal Society, 1936-40.
- Bragg, Sir (William) Lawrence, O.B.E., M.C., F.R.S. (b. 1890)**, succeeded Lord Rutherford as Cavendish Prof. of Experimental Physics, Cambridge Univ., 1938-53. Dir. Royal Institution, 1954-. Shared with his father (Sir Wm. H. Bragg) the 1915 Nobel Prize for research work on X-rays and crystal structures.
- Brahe, Tycho (1546-1601)**, a celebrated Danish astronomer, and fellow-worker of Kepler. With large sums of money put at his disposal by Frederick II, of Denmark, he built an observatory called Uraniborg on the island of Hveen, near Copenhagen, where for over 20 years he carried out a vast programme of accurate and systematic observations of the heavenly bodies and compiled tables of their motions.
- Brahms, Johannes (1833-1897)**, a German musical composer of deserved eminence, and the friend and pupil of Schumann. His compositions are of a varied order, most classical in form, and possess deep intensity of expression and poetic significance. His pianoforte music covers a wide range. He wrote some 300 songs, and among his more serious works the *German Requiem*, the *Triumphlied*, and the *Rhapsodie* are the best known.
- Braille, Louis (1809-52)**, French educationist, who, as teacher of the blind, perfected his system of reading and writing for the blind. As the result of an accident when he was three years old he was himself blind.
- Braithwaite, Dame Lilian, D.B.E. (d. 1948)**, actress who played a variety of parts, ranging from Rosalind and Portia to one of the charming old murderesses in *Arsenic and Old Lace*.
- Bramah, Joseph (1749-1814)**, a Yorkshireman who devoted himself to invention, introduced numerous mechanical improvements, including the hydrostatic press, a liquid-pumping apparatus, a most ingenious series of safety locks, and bank-note printing machines.
- Brampton, Lord, P.C. (1817-1907)**, long known to the public as Sir Henry Hawkins. Was famous as an advocate, and took part in many celebrated cases, including the Tichborne trial. His *Reminiscences*, published in 1904, was one of the books of the year.
- Brandes, Georg (1842-1927)**, the great Danish literary critic, whose full name was Georg Morris Cohen Brandes. His classic work, *Main Currents in Nineteenth Century Literature*, was translated into many languages. From 1912 he was Professor of Aesthetics at Copenhagen University. He was the author of many fine critical works, the most noteworthy of which were his study of Lord Beaconsfield, 1878, and study of Shakespeare, 1895-1897.
- Brangwyn, Sir Frank, R.A., R.P.E. (b. 1867)**; Officer and Cross of the Legion of Honour, France; Commander of the Order of St. Maurice and St. Lazarus, Italy; Member of the Reale Accademia de St. Luca, Rome; etc., etc. The greatest mural artist and etcher of his day, also noted for many lithographs.
- Brennan, Louis, C.B. (1853-1932)**, successful inventor, born in Ireland. Paid £120,000 by the British Government for his gyro-directed torpedo; also the inventor of a mono-rail locomotive on the gyroscope principle.
- Brewster, Sir David, LL.D., F.R.S. (1781-1868)**, a Scottish philosopher of great scientific attainments who edited the *Edinburgh Encyclopedia* in 1808, invented the kaleidoscope in 1816. Was one of the founders of the British Association, and a voluminous writer on science. Made important discoveries respecting the polarisation of light.

- Briand, Aristide** (1862-1932), 11 times Prime Minister of France, 16 times Foreign Minister, thrice Minister of Justice, 4 times Minister of the Interior and twice Minister of Education.
- Bridges, Rt. Hon. Sir Edward, G.C.B., G.C.V.O., M.C.** (b. 1892), son of Robert Bridges. Permanent Secretary to the Treasury and Head of Civil Service since 1945. Secretary to the Cabinet, 1938-46. Fellow of All Souls' College, Oxford, 1954.
- Bridges, Robert, O.M., M.A.** (1844-1930), was Poet Laureate 1913-30. Practised medicine up to 1882, thenceforward devoting himself mainly to literature. He published several volumes of poems and plays, displaying refined fancy and a broad philosophic spirit. His *Testament of Beauty* was published in 1930.
- Bridgewater, Francis Egerton, 3rd (and last) Duke of** (1736-1803). The projector of the famous Bridgewater Canal, which was the beginning of the great English canal system, and yielded his family enormous wealth; it was absorbed in 1887 by the Manchester Ship Canal Company, who paid £1,710,000 for it.
- Bridgewater, Francis Henry Egerton, 8th (and last) Earl of, F.R.S.** (1756-1829), grand-nephew of the last-named, and founder of the famous *Bridgewater Treatises*, written by the most celebrated divines and scientists of the day, and devoted to demonstrating the power, wisdom, and goodness of God, as manifested in the Creation.
- Bridie, James**, (pseudonym of Osborne Henry Mavor) C.B.E., LL.D., M.D. (1888-1951), Scottish author and playwright. Educated at Glasgow Academy and University. The first of his many successful plays was *The Anatomist*, produced in 1931. Others include *Tobias and the Angel*, *Jonah and the Whale*, *Mr. Bolfrey*, *Dr. Angelus*.
- Brieux, Eugene** (1858-1932), French dramatist, whose plays are satires on definite evils of society, and deal with such subjects as divorce, legal hypocrisy, social diseases, etc. Was elected a member of the French Academy in 1909.
- Bright, Sir Charles Tilstone** (1832-88), English telegraph engineer, who after superintending the laying of telegraph lines in many parts of Great Britain organised the Atlantic Telegraph Company (1856), and as Engineer-in-chief supervised the laying of the first Atlantic Cable (1858).
- Bright, Rt. Hon. John** (1811-1889), a famous Radical Quaker statesman and orator, one of the chief promoters of the Reform movement which led to the introduction of Free Trade.
- Britten, Edward Benjamin, C.H.** (b. 1913), composer of a variety of music, including *Spring Symphony*, *Let's make an Opera*, *The Rape of Lucrezia*, *Peter Grimes*, *Albert Herring*, *Billy Budd*, and *Gloriana*, composed to mark the occasion of the Coronation.
- Broca, Paul** (1824-80), French anthropologist, surgeon and pathologist. From 1867 he was Professor of Pathology, Paris. He discovered the seat of speech in what is known as convolution of Broca. He was the founder of modern anthropology and is regarded as the originator of the science of craniology.
- Brock, Sir Thomas, K.C.B., R.A.** (1847-1922), pupil of Foley, achieved a high reputation as a sculptor. The Queen Victoria Memorial in front of Buckingham Palace is his work.
- Brogan, Denis William, M.A.** (b. 1900), Prof. of Political Science at Cambridge. An authority on France, America, and Britain, and his works include *The Development of Modern France*, *Politics and Law in the United States*, and *The English People*.
- Broglie**, French noble family of Piedmontese origin who settled in France in the 17th cent. Victor Maurice, comte de Broglie (1871-1745) was marshal of France and fought in the wars of Louis XIV. Louis Victor, prince de Broglie (b. 1892) and Maurice, duc de Broglie (b. 1875) the eminent French physicists are his grandsons.
- Brontë, Charlotte** (1816-1855), one of the most gifted novelists of the 19th century. Her *Jane Eyre*, published in 1847, attracted universal notice, and her other novels, *Shirley*, *Villette*, and *The Professor*, are all marked by the force of strong genius. Her sisters, Emily (1818-48) and Anne (1820-49), also wrote novels and poems, Emily's *Wuthering Heights* and some of her verse showing exceptional power.
- Brookeborough, Basil Stanlake Brooke, 1st Viscount, C.B.E., M.C.** (b. 1888), Prime Minister of Northern Ireland since 1943. An Ulster Unionist.
- Brooke, Rupert** (1887-1915), a British poet who died during the first world war, whose works, though few, showed great promise and include the poems *Granchester* and *If I Should Die*.
- Brougham, Lord, P.C., F.R.S.** (1778-1868), one of the chief legal luminaries of the 19th century, who made a great name by defending Queen Caroline against George IV., and afterwards rose to political eminence.
- Brown, Sir Arthur Whitten, K.B.E.** (1886-1948), together with Sir John Alcock (d. 1919) in 1919 made the first transatlantic flight, crossing from Newfoundland to Ireland in 16 hr. 12 min.
- Brown, John**, "of Ossawatimie" (1800-1859), the hero of Harper's Ferry, whose action in inciting certain negro slaves to rebel in 1859 struck the note of alarm which resulted in the Civil War. His attempt to take the Arsenal at Harper's Ferry was defeated, and he was hanged, being afterwards regarded as a martyr by the Abolitionists.
- Browne, Charles Farrer (Artemus Ward)** (1834-1867), was one of the most whimsical and entertaining humorists America has produced. In addition to his books he wrote and delivered exceedingly funny lectures, and was making an English tour with them when he was seized with a fatal illness, dying at Southampton.
- Browne, Hablot Knight** (1815-1882), best known as "Phiz," the illustrator of Dickens's novels, from the *Pickwick* period down to *Little Dorrit*.
- Browne, Sir Thomas** (1605-82), author of *Religio Medici*, was a London physician and antiquary.
- Browning, Elizabeth Barrett** (1806-1861), an English poetess of eminence who, between 1830 and 1860, wrote many poems showing great intellectual grasp and imaginative fervour. Some of her works, such as *The Cry of the Children*, *Lady Geraldine's Courtship*, *The Rime of the Ancient Mariner*, and *Bertha in the Lane*, are sure of immortality, and her *Aurora Leigh*, a novel in poetic form, is, in portions, on a high level of poetic execution. She was married to Robert Browning in 1846, and afterwards lived mostly in Italy.
- Browning, Robert** (1812-1889), one of the two greatest poets of the later Victorian era. His earlier poems and dramas, though marked by singular insight and power, were far from popular, mainly because of a somewhat obscure and involved style from which he only occasionally freed himself. His *Strafford*, and *The Blot on the 'Scutcheon* were both produced by Macready, and attained some measure of stage success; but Browning was essentially a poet to be read, rather than acted. Some of his dramatic characterisations are of striking power. From about 1864 he published many works and knew at last what it was to be an appreciated poet. His *Men and Women*, *Dramatis Personae*, and *The Ring and The Book*, contained some of the finest poetry of modern times.
- Bruce, Robert** (1274-1329), took part with Sir William Wallace (q.v.) in the revolt against Edward I., later leading the popular cause. Achieved one victory after another, until at Bannockburn he overthrew the English army and ultimately secured Scottish independence. He reigned twenty-two years as King Robert I.
- Bruce of Melbourne, Viscount, P.C., C.H.** (b. 1883), Prime Minister of Australia, 1923-29, was Resident Australian Minister in London, 1932-33. High Commissioner for Australia, 1933-45. Chairman International Emergency Food Council, 1946; chairman World Food Council, 1947.
- Brummell, George Bryan** (1778-1840), "Beau Brummell," the fashion leader in English Society when George IV. was Prince of Wales; was a *bon vivant* and gamester whose excesses involved him in imprisonment and ultimate imbecility.
- Brunel, Isambard Kingdom** (1806-1859), a prominent engineer who constructed the more difficult portions of the Great Western Railways, and many other important works. He also achieved eminence as a designer of steamships.
- Brunel, Sir Mark Isambard** (1769-1849), father of the last-named, and constructor of the Thames tunnel, finished in 1843.
- Brunelleschi, Filippo** (1379-1446), Italian archi-

- tect, born in Florence, pioneer of Renaissance architecture, adapting the ideals of the Roman or classic period to the conditions of his own day. Many examples of his work are to be seen in Florence—in the Pitti Palace, the Churches of San Lorenzo and San Spirito, the great cupola of the cathedral of Santa Maria del Fiore and the beautiful carved crucifix in the Church of Santa Maria Novella.
- Bruno, Giordano** (c. 1548–1600), Italian philosopher and martyr; entered the Dominican Order at Naples in his 15th year. Accused of heresy he fled from his convent and roamed over Europe. In 1592 he returned to Italy and was arrested by the Inquisition. After 7 years in prison was burned at the stake, Feb. 17, 1600. A statue to him was erected in the Campo dei Fiori, 1889.
- Brutus, Marcus Junius** (85–42 B.C.), Roman Governor and one of the founders of Roman civil law.
- Bryant, Arthur Wynne Morgan** (b. 1899), English historian and pageant producer. Among his works are *English Saga*, 1840–1940, a life of *George V.*, *The Story of England*, and several books on the Napoleonic War years and the Restoration period, including a balanced and informative biography of Pepys.
- Bryce, James, 1st Viscount, P.C., O.M., G.C.V.O., F.R.S.** (1838–1922). Statesman and diplomat; entered Parliament as a Liberal. A convinced home-ruler, he became chief secretary for Ireland, 1905–7, and from 1907 to 1912 British Ambassador to the United States. Among his historical writings his works on *The American Commonwealth* and *The Holy Roman Empire* hold high rank.
- Buchanan, George** (1506–82), Scottish humanist who spent most of his life in France lecturing and writing Latin poems, plays, and treatises. Montaigne, Mary Queen of Scots, and James VI of Scotland were his pupils at various times. He was the best Latin scholar of his age, and his most important works are *De jure regni apud Scotos* and *Rerum Scotticarum historia*.
- Buchman, Rev. Frank Nathan David** (b. 1878), an American evangelist, and leader of the movement known as "moral rearmament." Initiated in 1921 the Religious Fellowship known as the Oxford Group Movement.
- Buchner, Eduard** (1860–1917), a noted German chemist and Professor, famous for his discovery of the enzymes within yeast cells and for his researches in connexion with this was awarded the Nobel Prize for Chemistry in 1907. Was a pioneer in the chemistry of fermentation.
- Büchner, Georg** (1813–37), German dramatist whose career was terminated by his early death at the age of twenty-four, but whose limited output (principally *Dantons Tod* and the fragment *Woyzeck*) is marked by extraordinary power and maturity.
- Buck, Pearl Sydenstricker** (b. 1892), the well-known American novelist and Nobel Prize winner for Literature, 1938. Her childhood was spent in China, to which country she returned after receiving her higher education in U.S.A., and from 1924–31 taught at the University of Nanking, where she was a professor. *The Good Earth* (1931) gained for her the Pulitzer Prize.
- Buckle, George Earle** (1854–1935), was educated at Oxford, and made a brilliant start on the editorial staff of *The Times*, becoming editor on the death of Thomas Chenerly in 1884–1912. Wrote Vols. III. to VI. of *The Life of Disraeli*, of which Vols. I. and II. were written by the late W. F. Monypenny.
- Buckle, Henry Thomas** (1821–1862), the author of *The History of Civilisation in England*, one of the most vigorous productions of the 19th century.
- Budge, Sir Ernest Alfred Wallis, Litt.D., D.Litt., F.S.A.** (1857–1934), a distinguished archaeologist who conducted many excavations in Mesopotamia and Egypt. Was Keeper of Egyptian and Assyrian Antiquities at the British Museum, 1893–1924.
- Bufon, George Louis Leclerc, Comte de** (1707–88), French author and naturalist who devoted his life to the study of natural history and whose great work *Histoire Naturelle* in 86 volumes appeared between 1749 and 1789.
- Bulganin, Marshal Nikolai Alexandrovitch** (b. 1895), succeeded Malenkov as Chairman of the Soviet Council of Ministers (Prime Minister) in 1955. Formerly Soviet Defence Minister.
- Bull, John** (1563–1628), was organist to James I. and composed much acceptable music, including, it is supposed, our National Anthem *God save the Queen*.
- Bunche, Dr. Ralph Joynson** (b. 1904), Director of the U.N. Dept. of Trusteeship (1946–48); awarded the Nobel Peace Prize in 1950 for his work as mediator in Palestine. Appointed Professor of Government at Harvard University in 1950. Appointed under-secretary without portfolio to deal with special problems at U.N. Headquarters, 1954.
- Bunsen, Robert Wilhelm** (1811–1899), noted German chemist, discoverer of the metals caesium and rubidium, and inventor of the Bunsen burner, battery, and pump. Made many important observations in spectrum analysis.
- Bunyan, John** (1628–1688), was originally a travelling tinker and fought with the Cromwellians. Joining a Baptist Society in Bedford in 1655, he became imbued with religious enthusiasm and was for some years a popular preacher. After the Restoration he was thrown into prison, and there wrote his *Pilgrim's Progress* and *The Holy War*, the two finest allegorical works in this or any language.
- Burbank, Luther** (1849–1926), the famous American botanist and hybridist, who made numerous successful experiments in the direction of selection and cross-fertilisation, by which methods he produced the Burbank potato, the Burbank plum, and many new varieties of various fruits, flowers and vegetables.
- Burghley, William Cecil, Lord** (1520–1598), Secretary to Lord Protector Somerset, an influential statesman under Edward VI. and Queen Mary, and subsequently Queen Elizabeth's favourite Minister for forty years.
- Burke, Edmund** (1729–1797), the acknowledged philosopher of conservatism; son of a Dublin attorney, went to London in 1756, and made his mark in literature by his famous work on the *Sublime and Beautiful*. Later on was private secretary to the Marquis of Rockingham, then Premier, and entered Parliament, where he quickly made a name. An able and earnest debater, he took part in all the great movements of his time, and in 1795, after his retirement, was awarded a handsome pension from the Civil List.
- Burne-Jones, Sir Edward Coley, Bt.** (1833–1898), an English painter of singular power, who at first modelled himself upon Rossetti, whose influence is more or less visible in most of his works. A sad mysticism dominates his pictures, but the colour scheme, the design and the poetic charm are always evident. His most famous works are *The Days of Creation*, *The Mirror of Venus*, *The Briar Rose*, and *King Cophetua*.
- Burnet, Bishop Gilbert** (1643–1715), wrote a *History of His Own Times*, which deals with many events of which he had personal knowledge, and is a valuable legacy to historical scholars.
- Burnet, Sir John James, R.A.** (1859–1938), was a leading British architect, whose most important work was the King Edward VII Galleries of the British Museum, opened in May 1914. Among his many large buildings in London are Adelaide House, and the extension to Selfridge's.
- Burney, Fanny.** (See D'Arbly, Madame.)
- Burns, Rt. Hon. John** (1858–1943), was a prominent Parliamentary Labour representative. As a working man and a friend of working men, he came into special prominence during the great strike of dockers, 1889. Represented Battersea in Parliament, 1892–1918, and was for a number of years an active member of the L.C.C. Was President of the Local Government Board, 1905–14; in Feb. 1914, became President of the Board of Trade, but resigned the office when war broke out in Aug. 1914.
- Burns, Robert** (1759–1796), Scotland's greatest poet. Startled the world with a little book of poems in 1786 which proclaimed him a true son of the muses. With the £500 that his book yielded him he bought a farm, obtained an appointment with the Excise in 1789, and for the last five years of his life lived at Dumfries. In his career he poured forth song after song of emotional tenderness, and made his name immortal.

**Burton, Sir Richard Francis, K.C.M.G. (1821-1890).** explorer, orientalist, and diplomatist, who became famous after making a pilgrimage to Mecca in 1853 disguised as a Mohammedan. Later he did much exploring in Central Africa, wrote several books and made a remarkable literal translation of the *Arabian Nights* (18 vols.).

**Bustamante, Anastasio (1780-1853),** Mexican general and president.

**Bustamante, Antonio Sánchez de (1865-1951),** Cuban authority on international law.

**Bustamante, Sir William Alexander (b. 1884),** Jamaican labour leader and politician. When Jamaica received its new constitution in 1944 the Labour Party under his leadership gained an overwhelming electoral victory and he became Minister of Communications. Organised Jamaican labour into a single body, the Bustamante Industrial Trade Union.

**Butler, Joseph (1692-1752),** an English divine who occupied an important place among eighteenth-century thinkers. He declined the Archbishopric of Canterbury in 1747, but in 1750 became Bishop of Durham. In 1736 he published his *Analogy of Religion*, the whole of which was a reply to the deistic attacks on revealed religion.

**Butler, Dr. Nicholas Murray (1862-1947),** President of Columbia University, 1902-45. A well-known publicist and internationalist and one of the most honoured and distinguished leaders in the world of education. Shared with Jane Addams (*q.v.*), the noted American sociologist, the Nobel Prize for Peace, 1931.

**Butler, Rt. Hon. Richard Austen, C.H., M.P. (b. 1902),** Chan. of the Exchequer in Mr. Churchill's Government, 1951, Min. of Education, 1941-45, and responsible for the Education Act, 1944. A member of the distinguished Cambridge family and son of the late Sir Montague Butler, formerly Master of Pembroke. Took leading part in the drawing-up of the various political charters setting out Conservative policy.

**Butler, Samuel (1612-1680),** renowned as the author of *Hudibras*, one of the wittiest poems in the language and one of the most quoted. His last years were spent in poverty, and he was buried in the churchyard of St. Paul's, Covent Garden, and given a memorial in Westminster Abbey, "that he who was destitute of all things when alive might not want a monument when dead."

**Butler, Samuel (1835-1902),** author of the satirical novel *Erewhon* and its sequel *Erewhon Revisited*. Other works include *The Fair Haven* (1873), *Life and Habit* (1877), *Evolution Old and New* (1879), in which he attacked Darwinism. *The Way of All Flesh* and his famous *Notebooks* were published posthumously. Butler was a man of great originality and scholarship. He studied painting and exhibited regularly in the Academy and was also a musician.

**Butt, Dame Clara, D.B.E. (1873-1936),** the famous English contralto, made her first professional appearance in London in 1892. Her success was immediate. She was married to Mr. Kennerly Rumford—also an able vocalist—in 1900.

**Buxton, Sir Thomas Fowell, 1st Bart. (1786-1845),** a philanthropist and zealous advocate of the abolition of slavery.

**Buzzard, Sir Farquhar, Bart., K.C.V.O., M.D. (1871-1945),** Physician-in-ordinary to the King, 1932-45. Regius Professor of Medicine, Oxford, 1928-45. Was one of the doctors in attendance on King George V. during his serious illness in 1928.

**Byrd, Rear-Admiral Richard Evelyn (b. 1888),** famous American aviator and Polar explorer. Was in command of the Macmillan Arctic Expedition, 1925; flew over the North Pole, 1926; with three companions flew across the Atlantic, 1927, and in 1929 made the first flight over the South Pole. Discovered Edsel Ford mountains and Marie Byrd Land on his first expedition to the Antarctic, 1928-30. He made a second expedition in 1933-5, a third in 1939 and a fourth—the largest ever—in December 1946.

**Byron, George Gordon, 6th Lord (1788-1824),** was the poet who exercised the greatest influence upon European thought during the early part of the 19th century. Educated at Harrow and Cambridge, he published his *Hours of*

*Idleness* at twenty, a volume which was violently attacked by the *Edinburgh Review*, and provoked the retaliatory *English Bards and Scotch Reviewers*, which caused a great sensation because of its unsparing criticisms of the writers of the day. His *Child Harold's Pilgrimage*, the first two cantos of which were published in 1812, at once placed him in the front rank of poets, and thenceforward to the time of his death he continued to produce poems, most of which were marked by an intense Republican sentiment, yet full of passion and charm and beauty. He made an unhappy marriage in 1815 with the daughter of Sir Ralph Milbanke, from whom he parted after a twelvemonth. He lived abroad for the rest of his life and died at Missolonghi, whither he had proceeded with a view to aiding the Greeks in their battle for national independence.

## C

**Cable, George Washington (1844-1925),** a well-known American author, born in New Orleans, the scene of many of his best works. He excelled in the writing of historical romances, of which the detail was obtained by patient research, and in the re-creation of the spirit of pre-civil War Louisiana. Among his writings were *Ole Creole Days* (1879), *Strange Stories of Louisiana* (1889), and serious sociological studies such as *The Negro Question* (1890).

**Cabot, John (c. 1455-c. 1498),** Genoese explorer who settled in Bristol and sailed westwards under letters-patent from Henry VII of England in 1497. Discovered Newfoundland and Nova Scotia, believing them to be part of Asia, and may have reached the mainland of America before Columbus did. His son:—

**Cabot, Sebastian (c. 1483-1557)** was born in Venice, and in 1509 sailed in search of a north-west passage to Asia. Sailed as far as the entrance of Hudson Bay. Entered Spanish service in 1512, and in 1518 was appointed chief pilot. Spent several years exploring the Plate and Paraná rivers. Re-entered English service in 1548 and organised expedition to seek a north-east passage to open up trade with India, which resulted in trade with Russia. English claim to North America is founded on the voyages of the Cabots.

**Cabral, Pedro Alvarez (c. 1467-c. 1520),** Portuguese navigator, friend of Vasco da Gama, and discoverer of Brazil, which he named "Terra da Santa Cruz."

**Cadbury, George (1839-1922),** was a prominent member of the Society of Friends, a well-known Philanthropist, an ardent Liberal, and head of the firm of Cadbury Bros., Bourville. He took the lead in the Garden City project, and the village of Bourville may be regarded as the first enterprise of the character to be practically completed; it has an endowment of over £200,000.

**Cade, Jack, an adventurous Irishman** who at one time was forced to flee to France, where he took the name of Aylmer, and in 1450 that of Mortimer. In the same year he headed a rebellion, his followers being mostly yeomen and the smaller landed proprietors of Kent and Sussex. After defeating the forces of Henry VI, at Sevenoaks Cade marched on London with 20,000 men. His demand for money alarmed the citizens. He retired with his followers to Southwark, whereupon the Lord Mayor closed London Bridge. The battle for re-entry into the city was unsuccessful, and after negotiations between Archbishop Kemp and Cade the rebels agreed to return home. But Cade himself, refusing to acknowledge defeat, retired to Rochester, and fell fighting at Heathfield, Sussex.

**Cadogan, Rt. Hon. Sir Alexander, O.M., G.C.M.G., K.C.B. (b. 1884),** entered the Diplomatic Service in 1908, and succeeded Lord Vansittart as permanent Under-Secretary of the Foreign Office in 1938. Helped to draft the Charter of the United Nations Organisation, and became Great Britain's first permanent representative on the Security Council. Appointed Chairman of the B.B.C. in 1952.

**Cædmon, the first English Christian poet,** lived in the seventh century and, according to Bede, was first a cowherd and later a monk at Whitby. His poetry was based on the Scriptures.

**Cæsar, Caius Julius** (100-44 B.C.), Roman general. Was appointed successively military tribune, quaestor, ædile in 65, and pontifex maximus in 63. A year later he was prætor, and later formed one of the first triumvirate. He invaded Gaul and Britain, in the Civil War defeated Pompey, and in the Alexandrine war met Cleopatra, and established her firmly on the throne of Egypt. On his return to Rome in 44 the crown was offered to him, a circumstance which caused the aristocratic party to compass his assassination.

**Caine, Sir Thomas Henry Hall, C.H., K.B.E.** (1853-1931), a well-known novelist, who after spending some years as a journalist joined Dante G. Rossetti, with whom he lived until the latter's death. He produced numerous novels, including *The Deemster*, *The Manxman*, *The Christian*, *The Prodigal Son*, *The Woman Thou Gavest Me*, the latter being one of the fiction sensations of 1913.

**Calderon de la Barca, Pedro** (1600-1681), a Spanish dramatist of great eminence whose plays number nearly 200. He was writer of court spectacles for Philip IV.

**Callcott, Sir Augustus Wall, R.A.** (1779-1844). Attained great eminence as a landscape painter.

**Calvé, Madame Emma** (1864-1942). One of Europe's most famous *prime donne*; made her first appearance as Marguerite in Gounod's *Faust* at Brussels in 1882; sang in Mascagni's *Cavalleria Rusticana* at Covent Garden ten years later. Her greatest part was Carmen.

**Calvin, John** (1509-1564), one of the leading Reformers of the 16th century. Was born in Picardy and attained great popularity as a preacher in Paris, but was expelled, and subsequently lived at Geneva, where he continued to preach the new doctrine, giving it that special shape which resulted in the formation of the Calvinist body, distinguished by its greater austerity from that of the Lutherans.

**Camden, William** (1551-1623), an antiquary, historian, and master of Westminster School, whose researches, especially in the field of topography, have been of the greatest value. He became Clarenceux King-at-Arms, and was buried in Westminster Abbey. The Camden Society is named after him.

**Cameron, Sir David Young, R.A.** (1865-1945), was one of the best known of British etchers as well as an excellent landscape-painter. King's Painter and Limner in Scotland, 1933-45.

**Cameron, Richard** (c. 1648-1680), one of the Scottish 17th-century preachers who raised the standard of revolt in defence of the Solemn League and Covenant; he was, after many vicissitudes, slain in combat near Aird's Moss, Ayrshire, in 1680. The members of the Reformed Presbyterian Church were afterwards called Cameronians.

**Cameron, Verney Lovett, C.B.** (1844-1894), a noted African explorer who was the first to cross the African continent from east to west. Explored Lake Tanganyika, and made many valuable geographical discoveries. In 1872 went out to find Livingstone, and in 1878 met a party of natives bearing the dead body to the coast.

**Camillus, Marcus Furius** (446-365 B.C.), was five times Dictator of the Roman Republic, a supporter of the patrician order, and one of the most successful of the Roman generals. He died of the pestilence, 365 B.C.

**Camm, Sir Sydney, C.B.E.** (b. 1893), designer of the Hawker Hurricane Fighter aeroplane.

**Cammaerts, Emile, C.B.E.** (1878-1956) Belgian poet, critic, historian and dramatist. Born in Brussels, he settled in England in 1908, and became Professor of Belgian Studies and Institutions in the University of London. He became widely known during the war of 1914-18 for a series of Belgian poems.

**Camões, Luis Vaz de** (1524-1580), the author of *os Lusíadas*, the great epic poem of Portugal, which sets forth the adventures of the discoverers of India, and celebrates the achievements of the principal personages in Portuguese history.

**Campbell, Sir Malcolm** (1885-1948), the racing driver who held the land-speed record of 301 m.p.h. (1935) and water-speed record 141.7 m.p.h. (1939). His son Donald broke his own world water-speed record on Nov. 6, 1955, averaging 216.2 m.p.h.

**Campbell, Beatrice Stella** (Mrs. Patrick Campbell) (1865-1940), was a celebrated actress. Her first London appearance was in 1890 in *The Hunchback*. She made her film debut in 1930 in *The Dancers*.

**Campbell, Thomas** (1777-1844), the well-known poet who at twenty-two published *The Pleasures of Hope*, a British classic. Many of his lyrics and songs take high rank, notably *Ye Mariners of England*, *Hohenlinden*, *The Battle of the Baltic*, and *The Exile of Erin*. He was granted a Crown pension of £200 a year, and was buried in Westminster Abbey.

**Campbell-Bannerman, Rt. Hon. Sir Henry, G.C.B.** (1836-1908), Prime Minister in the Liberal Ministry from December 1905 until shortly before his death in April 1908. His Government at once faced a General Election and obtained a very large majority. Notable events of his period of office were the Trades Disputes Act, 1906, the Deceased Wife's Sister Act, 1907, and the simmering quarrel between the Liberals and the House of Lords, while the settlement of the South African problem was to a great extent due to his efforts. His Ministry contained a galaxy of talent—Grey, Haldane, Lloyd George, Asquith, Morley, Churchill—and was mainly held together by his personal popularity.

**Camus, Albert** (b. 1913), important French writer, whose works show the influence of existentialism. Born in Oran, he crossed to the mainland during the German occupation and became a journalist on the staff of *Combat*, a newspaper of the resistance. His works include *Les Justes* (play), *L'Étranger* (novel), *La Peste* (novel), *Caligula* (play), *Le Malentendu* (play).

**Canning, Rt. Hon. George** (1770-1827), entered Parliament in 1793 and became a great orator and a devoted adherent of Pitt, under whom he served first as Under-Secretary of State and later as Treasurer to the Navy. He was Secretary for Foreign Affairs under the Duke of Portland, and in 1827 became Prime Minister, but died four months later.

**Cannizzaro, Stanislao** (1826-1910), Italian chemist who rendered great service to scientific education and whose work provided the basis of modern quantitative chemistry. Prof. of chemistry at Alexandria, Geneva, Palermo, and Rome.

**Canova, Antonio** (1757-1822), an Italian sculptor, whose influence was highly marked, and whose works achieved the first eminence.

**Canute the Great** (995-1035), invaded England with a Danish force, and in 1013 succeeded in deposing Ethelred the Unready, and setting up his own father, Sweyn, in Ethelred's stead. Sweyn dying in 1014, Canute claimed the crown, but it took him some years to establish himself firmly.

**Capablanca, José Raoul** (1888-1942), world's chess champion, 1921-27; defeated by Alekhine.

**Capek, Karel, Ph.D.** (1890-1938), an original Czech author and journalist. His *R.U.R.*, *Insect Play* and *Adam the Creator* have been produced in England.

**Capone, Al** (1900-47), notorious U.S. gangster, uncrowned king of Chicago during the prohibition era. Suspected of instigating many murders, but evaded justice until brought to trial on Income Tax charges. Sentenced to eleven years' imprisonment in 1931, but released in 1939.

**Caractacus** was the name by which a Prince of ancient Britain became famed for his resistance to the Romans in the 1st century. He was ultimately captured and taken prisoner to Rome, where the Emperor Claudius was so moved by his dignity of bearing that he pardoned him.

**Carey, William, D.D.** (1761-1834), the first Baptist missionary to proceed to India, and from 1800 to 1830 Professor of Oriental Languages at Port William College, Calcutta. Became famed as an Oriental scholar, and published twenty-four different translations of the Scriptures.

**Carissimi, Giacomo** (1604-74), an Italian composer who is historically important for his development of the sacred cantata and the oratorio. Was maestro at Assisi, and later at Rome. The best collection of his works are in the National Library in Paris, and in the library of Christ Church, Oxford.

**Carlyle, Thomas** (1795-1881), was educated at

Edinburgh University, and, after passing through some years of teaching drudgery, settled in London in 1824 and began the career of a serious man of letters: but, marrying Jane Welsh in 1826, he returned to Scotland and spent the next few years on a farm at Craigenputloch, coming to London again in 1834. His *Sartor Resartus* was published in 1833. In 1837 he gave lectures in London, and in 1839 his *Chartism* appeared. His *French Revolution, Past and Present, Life and Letters of Oliver Cromwell, Latter-Day Pamphlets*, and *Frederick the Great* were works of noble conception.

**Carnegie, Andrew** (1835-1919), b. in Dunfermline, emigrated to America with his father in 1848, and after passing through much menial employment became connected with the Pennsylvania Railroad as Divisional Superintendent at Pittsburgh, and ultimately established the Carnegie iron works, from which he retired in 1901 with a fortune of many millions. His munificent gifts for Free Libraries, educational work, and charitable objects are well known.

**Carnot, General Lazare Nicolas Marguerite** (1753-1823), was a prominent figure in the French Revolution, and author of an important work on fortification.

**Caroline, Queen**, wife of George IV. (1768-1821), was married to her husband in 1795 while he was Prince of Wales. The royal couple lived together only a very short time. When George succeeded to the throne in 1820 the Queen took steps to assert her position, and the King retaliated by having a Bill introduced to dissolve the marriage; the result was the famous trial before the House of Lords, when Lord Brougham distinguished himself by a most eloquent defence of the Queen. The Bill was passed by a narrow majority, but public feeling was too strong on the side of the Queen to admit of its being enforced.

**Carrel, Dr. Alexis** (1873-1944), was the famous American surgeon, who won the Nobel Prize in 1912 for his remarkable achievements in suturing blood vessels and in the transplantation of organs. Member of the Rockefeller Institute for Medical Research 1906-44. A Frenchman by birth.

**Carroll, Lewis.** (See Dodgson, Charles Lutwidge.)

**Carson of Duncarn, Lord, P.C.** (1854-1935), had a highly successful career first at the Irish and then at the English Bar. Solicitor General for Ireland 1892; and for England 1900-6; Attorney General 1915; First Lord of the Admiralty 1917; Lord of Appeal 1921-29. Led a semi-militant organisation against the Home Rule Bill 1912-14.

**Carter, Howard** (1873-1939), the famous Egyptologist and archaeologist who was associated with the 5th Earl of Carnarvon in discovering in 1922 the tomb of Tut-Ankh-Amen in the Valley of Kings, Egypt.

**Cartier, Jacques** (1494-1557), the famous 16th-century navigator, born at St. Malo, whose exploration of Canada, and especially of the gulf and river of St. Lawrence, proved of great geographical importance.

**Cartwright, Edmund, D.D.** (1743-1823), invented the power loom, and also a wool-combing machine. Although these inventions were developed into fortune-making instruments, they benefited their inventor but little, and in 1809 Parliament made him a grant of £10,000. In 1904 a Cartwright Memorial Hall was opened at Bradford, the gift of Lord Masham.

**Caruso, Enrico** (1873-1921), a celebrated tenor, was born in Naples, and made his first operatic appearance in his native city. His success was unbounded. Besides being a great singer he was a man of many activities, and, among other things, was a clever caricaturist.

**Carver, George Washington** (1864-1943), American negro agricultural chemist of world repute.

**Casabianca, Louis de** (c. 1754-1798), captain of the French flagship *L'Orient* at the Battle of the Nile. He and his ten-year-old son died together in the burning ship, refusing to quit the vessel.

**Casals, Pablo** (b. 1876), the famous Spanish violoncellist and conductor, who made his first appearance in Paris and London in 1898. He exiled himself from Spain in 1938 as a protest against dictatorship.

**Cassatt, Mary** (1845-1926), American painter and etcher. Spent most of her life in France, greatly influenced by the Impressionists and enjoyed friendship of Degas and Manet. Motherhood was her favourite subject.

**Cassini**, the name of a French family of Italian origin, distinguished for their services to astronomy and geography, who through four generations (1671-1793) were heads of the Paris Observatory.

**Cassius, Caius Longinus**, a distinguished Roman general who opposed the Dictatorship of Julius Caesar, and took part in his murder. He died in 42 B.C., after being defeated by Mark Antony.

**Castellani, Sir Aldo**, Hon. K.C.M.G. (b. 1877). Italian scientist and foremost living authority on tropical diseases. Discovered the cause of sleeping sickness and other tropical diseases.

**Castlereagh, Viscount, K.G.**, P.C. (1769-1822), British Minister of War and Foreign Secretary during the Napoleonic wars, who incurred much unpopularity because of the disastrous condition of home affairs. Succeeded to the Marquessate of Londonderry in 1821, and ended his life by suicide the following year.

**Cather, Willa Sibert** (1876-1947), American author; writer of beautiful English prose in novels of rare charm. Most of her scenes are laid in the mid-western prairies; *The Song of the Lark*, *My Antonia*, *A Lost Lady*.

**Catherine, St.**, was the name borne by a celebrated virgin of Alexandria, who was put to death in 307 for professing Christianity, being, according to some accounts, tortured on a spiked wheel before execution, though other authorities aver that the intended torture was miraculously prevented. From this we get the term "St. Catherine's wheel." Her festival is on November 25th.

**Catherine of Aragon** (1485-1536), first wife of Henry VIII., was previously the wife of Arthur, Henry's elder brother, who died shortly after the marriage. She was the daughter of Ferdinand and Isabella of Spain, aunt of the Emperor, Charles V., and mother of Mary Tudor. Henry's failure to obtain papal consent to the dissolution of their marriage precipitated the Reformation crisis in England.

**Catherine the Great** (1729-96), Empress Catherine II of Russia. Daughter of a Prussian general, she married in 1745 the future Peter III., a weakling, later deposed and murdered. Intelligent, cultivated, autocratic, she proved herself a capable ruler for a time but was hampered and opposed by the landed interests and, despite plans for reform, her reign was marked by imperialist expansion and extension of serfdom.

**Catherine de' Medici** (1519-1589), wife of Henry II. of France, and a woman of commanding power and influence, especially during her Regency, which continued while her son Charles IX. was in his minority. Her antagonism to the Protestants may have led to the Massacre of St. Bartholomew. In spite of her cruelty, she was an able woman, and showed a great appreciation of art and literature.

**Cato, Marcus Porcius** (234-149 B.C.), a Roman statesman, soldier, and writer, of strict virtue, simplicity and wisdom, who strongly condemned the luxury of his time and carried out his duties as Censor so rigorously that he became known as "Censorious."

**Catroux, Gen. Georges** (b. 1879), French soldier, who saw much service with the Foreign Legion. When Gov.-Gen. of Indo-China declared adherence to the Free French, 1940, and became C.-in-C. Free French in Levant, 1941-43. French Ambassador to U.S.S.R., 1945-46.

**Catullus, Caius Valerius** (87-54 B.C.), an elegant Roman poet, whose lyrics to Lesbia are amongst the finest compositions of the kind in literature.

**Cavell, Edith Louisa** (1865-1915), a British nurse and patriot who assisted wounded British soldiers to escape over the Dutch frontier from Belgium during the Great War. She was shot by the Germans.

**Cavendish, Hon. Henry, F.R.S.** (1731-1810), English chemist and physicist who made researches into the nature of gases. Is chiefly remembered for his discovery of the chemical composition of water. He also discovered hydrogen (1766).

**Cavour, Count Camillo Benso** (1810-1861), a distinguished Italian statesman, who, as Premier

- to Victor Emmanuel, did much for the unification of Italy.
- Caxton, William** (1422-1491), was born in Kent and employed in commerce for a time. While visiting Flanders he obtained an insight into the then new invention of printing, and afterwards set up a printing-press of his own at Westminster.
- Cecil of Chelwood, 1st Viscount, P.C., Q.C., C.H.** (b. 1864), third son of the third Marquess of Salisbury. Took part in the Peace Conference, 1919, and helped to draft the Charter of the League of Nations. Awarded Nobel Prize for Peace, 1937.
- Cecilia, St.**, the patron saint of music. Was a Christian martyr of the 2nd or 3rd century. She is said to have been the first to introduce instrumental with vocal music into Christian worship. Her festival day is November 22nd.
- Cellini, Benvenuto** (1500-71), Italian sculptor and goldsmith of the later Renaissance. Possessed remarkable talent and skill, and produced innumerable works of great accomplishment, decorative and exquisite in detail, most of which have perished. Some examples are to be found in the Vienna Museum, the Louvre, and in the Metropolitan Museum. His famous bronze statue *Perseus with the Head of Medusa* can be seen in the Loggia dei Lanzi, Florence. His fame, however, rests more on his *Autobiography*, which gives a vivid account of the period and of his own craft.
- Celsius, Anders** (1701-44), Swedish physicist and astronomer; prof. of astronomy at the new Uppsala observatory (1740-44) and inventor of the Centigrade or Celsius thermometer with freezing point of water at the zero-degree and boiling point at the 100-degree point.
- Cerdic**, a Saxon who invaded Wessex in the early part of the 6th century, and made himself ruler of that kingdom, becoming ancestor of the English Royal line. He conquered the Isle of Wight in 530.
- Cervantes Saavedra, Miguel de** (1547-1616), famous throughout the world as the author of *Don Quixote*, a wonderful study of feudalism in decay in which is to be found much social science. He had a most adventurous career, taking part in many military expeditions, and not turning to literature until his retirement from the profession of arms. In spite of the great success of his work, he died in poverty and two centuries went by before he was honoured.
- Cézanne, Paul** (1839-1906), a French painter of power and originality, and intimate friend of Emile Zola. The famous portrait known as *La Vieille au Chapelet* was purchased by the National Gallery in 1953.
- Chadwick, Sir James, F.R.S.** (b. 1891), physicist, one of Rutherford's most brilliant collaborators in the field of atomic research. Discovered the neutron in 1932, one of the main steps in the discovery of the fission process which led to the production of the atom bomb. Joint author with Lord Rutherford and C. D. Ellis of *Radiations and Radioactive Substances*, published in 1930. Master of Caius College, Cambridge.
- Chaliapin, Fedor Ivanovich** (1873-1938), a world-famous Russian opera singer, a bass with great dramatic gifts.
- Chamberlain, Rt. Hon. (Arthur) Neville** (1869-1940), son of Joseph Chamberlain by his second wife. Prime Minister, 1937-40. His appeasement policy, which culminated in the Munich Agreement of 1938, has been the subject of much criticism.
- Chamberlain, Rt. Hon. Joseph** (1836-1914), did much active municipal work at Birmingham. In 1876 he entered Parliament, and at first was an enthusiastic Liberal with Republican tendencies, and served in various offices under Mr. Gladstone. When the Home Rule split occurred, he became the most active member of the Liberal-Unionist party. In 1895 he accepted office as Secretary of State for the Colonies under Lord Salisbury, and in that post won a great reputation, notwithstanding the fact that during his term of office he had the Boer War to contend with. In May, 1903, he caused great sensation by suddenly advocating a scheme of fiscal reform, involving a partial return to Protection. This policy was afterwards adopted as one of the leading planks of the Unionist platform.
- Chamberlain, Rt. Hon. Sir (Joseph) Austen, K.G.** (1863-1937), son of Joseph Chamberlain by his first wife. Held ministerial posts in various Conservative administrations. As Foreign Secretary, 1924-29, was prominent at the Locarno conference. Awarded Nobel Peace Prize, 1926.
- Chambers, Sir William, R.A.** (1726-1798), a British architect, who rebuilt Somerset House in 1775. He also laid out Kew Gardens and designed the Pagoda there.
- Champlain, Samuel de** (1567-1635), a French navigator who founded Quebec in 1608, and in the following year discovered the lake known by his name.
- Chantrey, Sir Francis Legatt, R.A.** (1781-1842), a renowned English sculptor who contributed many fine statues to Westminster Abbey and St. Paul's. His famous "Sleeping Children" tomb is in Lichfield Cathedral. He left a considerable fortune to the Royal Academy for the purchase of works of art executed in Gt. Britain. The collection is in the Tate Gallery.
- Chaplin, Charles Spencer** (b. 1889), who gained world-wide fame as a film-star comedian, was born in London and appeared on the variety stage at the age of seven, going to the U.S.A. in 1910. He first appeared on the films in 1913. His most famous films include *The Tramp*, *Shoulder Arms*, *The Kid*, *The Gold Rush*, *The Circus*, *City Lights*, *The Great Dictator*, *Modern Times*, *Monsieur Verdoux*, and *Limelight*. His art is universally appreciated. In 1953 decided not to return to America but to live in Switzerland.
- Chapman, George** (1559-1634), an Elizabethan dramatist, who acquired more fame by his translation of Homer than by his plays. Keats's sonnet on reading Chapman's *Homer* is a splendid tribute to the old dramatist.
- Charcot, Dr. Jean Baptiste Etienne Auguste** (1867-1936), a famous French explorer, who in 1903-05 and 1908-10 commanded expeditions which carried out important work in mapping, sounding, etc., in the South Polar regions. Charcot Island in the Antarctic Ocean, which he discovered in 1905, is named after him.
- Chares (c. 300 B.C.)**, Rhodian sculptor. He was the sculptor of the Colossus of Rhodes, a gigantic bronze statue of the Sun-God, and one of the Seven Wonders of the World. The statue was destroyed after 56 years, in the earthquake of 224 B.C.
- Charlemagne ("Charles the Great")** (742-814), a wise and powerful ruler, general and statesman, who from being King of the Franks became Emperor of the Romans, and governed an empire comprising Gaul, Italy, and large parts of Spain and Germany.
- Charles Edward (Stuart)** (1720-1788), the "Young Pretender" as he came to be called, grandson of James II., and the hero of 1745, lived in exile after Culloden, and his later career was mainly one of dissipation.
- Charles I.** (1600-1649), succeeded his father James I. as King of England in 1625, and from the first was in more or less conflict with Parliament. His monetary demands and unjust taxation led to the violent opposition which resulted in the Civil War. He was beheaded in front of the Banqueting House at Whitehall, Jan. 30, 1649.
- Charles II.** (1630-1685). Was in command of the Royalist forces in the West during the Civil War, and escaped to the Continent after Naseby. Subsequently he became King at the Restoration, and, following upon the sober quietude of the Commonwealth period, formed an acceptable change to the people at large until, by his excesses, of one kind and another, he proved his unkingliness of character. He contrived to keep himself fairly popular, however, despite his extreme selfishness. Granted first Charter to the Royal Society.
- Charles V.** (1500-1558) was the dominating European figure for many years, being Emperor of Germany and King of Spain, at a time when his tactful policy enabled him to guard the interests of both Catholics and Protestants with considerable success.
- Charles XII of Sweden** (1682-1718), a brave but impulsive monarch whose reign was distinguished by the great Nordic War against Denmark, Poland, and Russia. Peter the Great decisively defeated him at Poltava in 1709. In 1718 he invaded Norway and was killed while besieging the fortress of Fredrikshald.

- Chateaubriand, François René, Vicomte de** (1768-1848), had an adventurous and somewhat eccentric political career, but in the midst of it all he contrived to write a number of stories, poems and essays, which give him a prominent place in French literature. His *Atala* and *The Martyrs* are works of genius.
- Chatfield, Admiral of the Fleet Lord, P.C., G.C.B., O.M., K.C.M.G., C.V.O.** (b. 1873). Minister for the Co-ordination of Defence Jan. 1939 to Apr. 1940; First Sea Lord and Chief of Naval Staff, 1933-38; Flag Captain to C-in-C, Grand Fleet, 1917-19; and later commanded the Atlantic and Mediterranean Squadrons.
- Chatham, William Pitt, Earl of** (1708-1778), had a long and distinguished career as a statesman, and was the most eloquent Parliamentarian of his time. In the long conflict with France that preceded the American War of Independence, Chatham showed great resourcefulness and vigour, but his patriotic efforts were of little avail against the obstinacy of the King and his party, and he ultimately retired from contention, only making a last appearance in the House of Lords to urge a greater resistance to the war with the American Colonists, and, after a powerful speech, fell back in an apoplectic fit and died a few weeks later, being buried in Westminster Abbey.
- Chatterton, Thomas** (1752-1770), young English poet of remarkable talent, unappreciated until after his death. Unsuccessfully tried to pass off his writings as newly discovered ancient manuscripts and killed himself at the age of 17.
- Chaucer, Geoffrey** (c. 1340-1400). Achieved immortality by his *Canterbury Tales* giving a most graphic description of the life and characters of his time. He was buried in Westminster Abbey.
- Chekov, Anton** (1860-1904), a Russian dramatist and short-story writer whose work has been translated into English and much appreciated.
- Cherubini, Maria Luigi Carlo** (1760-1842), an Italian composer and one of the most important composers of the early French School, and a noted musical theorist. After producing his first opera in 1780 he went to London where two new operas were produced. His *Iphigenie in Aulide* was produced first at Turin in 1788 and afterwards in the same year in Paris.
- Cherwell, 1st Baron** (Frederick A. Lindemann), P.C., C.H., F.R.S. (b. 1886). Prof. of Experimental Philosophy at Oxford; granted 2 years' leave of absence (1951-53) to become Paymaster General and personal scientific adviser to Sir Winston Churchill, with special responsibility on atomic energy questions. During his term of office the control of atomic energy development was transferred from the Min. of Supply to a non-departmental agency "Atomic Energy Corporation".
- Chesterfield, Earl of, K.G.** (1694-1773), the fourth Earl, and a statesman of note. His fame rests, however, upon his *Letters to his Son*, which for purity of style and grace of expression have seldom been excelled, though the moral they point is not always one that modern ideas would endorse.
- Chesterton, Gilbert Keith** (1874-1936), was one of the most active of our modern writers. Contributed to the *Illustrated London News*, etc., and kept himself in evidence in many literary and journalistic quarters; handled social questions, art, politics, and criticism with dexterity and audacity. Published studies of the lives and works of Robert Browning and Charles Dickens. Completed writing his own autobiography shortly before his death.
- Chevalier, Albert** (1861-1923), English music-hall comedian of great originality; celebrated for his coster sketches and songs.
- Chevalier, Maurice** (b. 1889), French stage and film actor.
- Chiang Kai-shek, Generalissimo** (b. 1887), former President of China and member of the Kuomintang Party. Emerged from the welter of events succeeding the death of Sun Yat Sen in 1925 as the leading man in China, a position he maintained for a quarter of a century of trouble and bloodshed. The successful conclusion of the long and costly Japanese war was followed by civil war with the Communists in North China. In January 1949 withdrew from the office of President following military defeat by the Com-
- munists and the collapse of the Kuomintang régime. Became a Christian of the Methodist confession shortly after his marriage to Soong Mei-ling the sociologist.
- Chippendale, Thomas** (c. 1717-1779), a celebrated designer of furniture whose examples are now highly prized and fetch big prices. He was a native of Worcestershire, but made his name in London, having a shop in St. Martin's Lane.
- Chirico, Giorgio de** (b. 1888), painter associated with surrealism, born in Greece of Italian parents.
- Chopin, Frédéric François** (1810-49), Polish pianist and composer, son of a French father and Polish mother. His music, mostly for piano, shows characteristics of both races, and includes the sequence of twenty-five Preludes, the Mazurkas, Nocturnes, Scherzos, and Impromptus. He frequented Paris intellectual and musical society, played in numerous concerts all over Europe, and died of consumption.
- Chou En-lai, General** (b. 1898), Prime Minister and Foreign Minister, Chinese People's Republic, 1949-. Took important part in Geneva Conference of 1954, where his talents for negotiation helped to bring to an end the 8 years' war in Indo-China and the new China into world diplomacy.
- Christie, Agatha** (b. c. 1898), English detective novelist. Creator of Hercule Poirot, the Belgian detective.
- Chrysostom, St. John** (347-407), a father and saint of the Greek Church who was made Archbishop of Constantinople and was famous for his eloquent preaching and persuasive writing.
- Churchill, Rt. Hon. Lord Randolph** (Henry Spencer), P.C. (1849-1895), was the second son of the seventh Duke of Marlborough. Entered Parliament in 1874, and four years later became prominent on the Conservative side for his scathing attacks on what he called the "Old Gang" of his own Party, and was one of Mr. Gladstone's most severe critics. In 1885 he became Secretary for India, and in the following year was Chancellor of the Exchequer and Leader of the House of Commons, but after a few months of brilliant work resigned on some difference of opinion with his colleagues, and never again held office.
- Churchill, Rt. Hon. Sir Winston** (Leonard Spencer), K.G., O.M., C.H., M.P. (b. 1874), British statesman, soldier, and author, son of the last-named. Prime Min. and Min. of Defence, 1940-45. Leader of the opposition, 1945-51 and Prime Min. from 1951 until his retirement in 1955. M.P. for Woodford since 1945. M.P. for the Epping Division of Essex, 1924-45. Was with the British force during the Indian frontier troubles of 1897-98; served in the Sudan Campaign, and during the Boer War had many dramatic adventures. Became a prominent figure in Parliament, and worked heartily for the Conservatives until Mr. Chamberlain brought out his fiscal proposals, when he declared against them in the most emphatic manner, and eventually joined the Liberal ranks. Under-Secretary for the Colonies, 1905-08; President of the Board of Trade, 1908-10; Home Secretary, 1910-11. First Lord of the Admiralty, 1911-15 and 1939-40. Chancellor of the Duchy of Lancaster, 1915. Minister of Munitions, 1917; Minister of War, 1918-21; Minister of Air, 1919-21. Sec. of State for the Colonies, 1921-22. Chancellor of the Exchequer 1924-29; Lord Rector of Aberdeen University, 1914-18; Lord Rector of Edinburgh University, 1929-32; Chancellor of Bristol University, 1930; Leader of Conservative Party, 1940-55. Lord Warden of the Cinque Ports since 1941. Has exhibited in the Royal Academy, was elected Academician Extraordinary in 1948, and is the author of many famous books. Awarded Nobel Prize for Literature in 1953.
- Chulalongkorn, Phra Paramindr Maha** (1853-1910), great Siamese monarch whose appreciation of foreign institutions inspired him to carry out many reforms in his country.
- Cibber, Colley** (1671-1757), a London actor and dramatist of great repute in his day. *The Careless Husband*, and *Love's Last Shift* are the best of his comedies. Poet Laureate 1730-57.
- Cicero, Marcus Tullius** (106-43 B.C.), a Roman Republican orator and philosopher. His

- younger brother, Quintus Tullius Cicero (102-43 B.C.), was a Roman soldier of some note. Both were slain.
- Cid (El Campeador)** (c. 1035-1099), the name given to the famous Spanish knight, Rodrigo Diaz, Count of Vivar, whose exploits in battle and adventure made him the national hero. He drove the Moors out of Spain before he had completed his twentieth year.
- Cierva, Juan de la** (1895-1936), the Spanish engineer who invented the autogiro.
- Cimabue, Giovanni** (1240-1302), a Florentine painter whose real name was Cenni di Pepo, master of Giotto, and the leader of the movement which led to the formation of what is called the Florentine school. The frescoes attributed to him are of great beauty.
- Cimarosa, Domenico** (1749-1801). One of the earliest Italian composers whose works in his time were as popular as they were numerous. Was composer to the Russian Court from 1789 to 1792. His most popular opera during his lifetime was *Il Matrimonio Segreto*, and it is still to-day the most frequently heard of his works.
- Cinquevalli, Paul** (1859-1918), the famous Polish juggler. He appeared first in England at Covent Garden Theatre in 1885, and for the next 20 years was the cleverest performer of his class. He possessed a most attractive stage personality, and a sense of balance that was truly marvellous.
- Citrine, 1st Baron P.C., K.B.E.** (b. 1887), English trade-union official who rose to a prominent position in the Electrical Trades Union, of which he was Asst. Gen. Sec., 1920-23; Pres. of International Fedn. of Trade Unions, 1928-45; Gen. Sec. of Trade Union Congress, 1926-46. Member of National Coal Board, 1946-47; Chairman British Electricity Authority, 1947.
- Clair, René**, (b. 1898), French film producer, whose early films included *Sous les Toits de Paris* and *A Nous la Liberté*. His films are full of wit and satire.
- Clarendon, Edward Hyde, 1st Earl of** (1609-1674), a statesman of great ability who filled the office of Lord High Chancellor under Charles II., and for a time was in high favour but, refusing to pander to Charles's whims, was dismissed and went to live in retirement. His *History of the Rebellion* is a valuable work, having the advantage of being written by one who was a witness of, and often an important figure in, the events described. His daughter Anne was the wife of the Duke of York, afterwards James II., and it was her daughter who became Queen Anne. Clarendon died in exile at Rouen.
- Clark, Sir Kenneth McKenzie, K.C.B.** (b. 1903), British art critic. Director of the National Gallery, 1934-45. Chairman of the Independent Television Authority, 1954.
- Clark, Wilfred Edward le Gros, M.A., M.D., D.Sc., F.R.C.S., F.R.S.** (b. 1895), anatomist and anthropologist; one of the scientists to expose the forgery of the Piltdown skull.
- Clarke, Gen. Mark W.** (b. 1896), distinguished American soldier who commanded all land forces in Italy, 1943-45; Supreme Allied Commander Far East, 1952-53.
- Clarke, Marcus Andrew Hislop** (1846-81). Australian author, born in London, he emigrated to Australia in 1863, becoming a journalist in 1867. He went to Tasmania, where his historical researches resulted in the publication of his book *For the Term of his Natural Life*, which earned for him a very wide reputation.
- Clarkson, Thomas** (1760-1846), was one of the leaders of the Negro Emancipation movement, to which he devoted the main part of his life.
- Claude Lorrain** (1600-1682), the most famous landscape painter of his century. His real name was Claude Gellée, and he was born at Chamagne in the Vosges, going from France to Rome as a lad and there laying the foundation of his world-wide celebrity. He lived in Rome most of his life.
- Claudius I.** (10 B.C.-A.D. 54), Emperor of Rome, who succeeded his nephew Caligula when he was murdered. He was the grandson of Tiberius Claudius Nero, erected many imposing buildings in Rome, and visited Britain. In his later years he became the tool of favourites, and was poisoned by his wife, Agrippina.
- Clausen, Sir George, R.A., R.W.S.** (1852-1944), an English landscape and genre painter whose work was greatly influenced by the impressionist school. Was for some time Prof. of Painting in Royal Academy.
- Clausewitz, Gen. Carl von** (1780-1831), Germany's greatest military expert. His classic book *Vom Kriege*, which expounds his theories on war, dominated Prussia in the nineteenth century, and is still studied in military schools throughout the world.
- Clemenceau, Georges Eugène** (1841-1929), a prominent French statesman and editor of strong Radical tendencies who supported General Boulanger for a time and then bitterly opposed him. Was still a leading exponent of French Radicalism, though he sacrificed his independent position to become Premier and Minister of the Interior in October, 1906-1909, Prime Minister and Minister for War, France, 1917-20. He was a great orator, and a sturdy defender of Dreyfus.
- Clemens, Samuel Langhorne** ("Mark Twain") (1835-1910). After the Civil War drifted into journalism, making himself popular as a humorist in 1869 by his *Innocents Abroad*, the result of a trip to Europe. His other works include *A Tramp Abroad*, *Tom Sawyer*, *Huckleberry Finn*, and *Pudd'nhead Wilson*.
- Cleopatra** (69-30 B.C.), daughter of Ptolemy XI, the sixth queen of Egypt by that name, a brilliant, ambitious woman of captivating charm. On the death of her father in 51 she became joint sovereign with her younger brother Ptolemy XII, whom she married in accordance with Egyptian custom. She was banished to Syria, but obtaining the help of Caesar, led a revolt and won the kingdom for herself. Cleopatra and Caesar became lovers. In 47 she bore him a son Caesarion (later Ptolemy XIV) and followed him to Rome. After the murder of Caesar she returned to Egypt, where in 41 she was summoned to meet the triumvir Mark Antony. He fell in love with her and became enslaved. She bore him twins Alexander Helios and Cleopatra Selene. He deserted Octavia his wife and broke with Octavian (later Augustus), his brother-in-law, in an attempt to re-establish the power of Egypt. Antony and Cleopatra were, however, defeated at Actium in 31 B.C. and at Alexandria. Antony fell upon his sword, and Cleopatra, unable to influence Octavian, killed herself by allowing an asp to bite her. The drama of her life has been described by Shakespeare in *Antony and Cleopatra* and by Shaw in *Caesar and Cleopatra*.
- Clifford, Rev. John, C.H., D.D.** (1836-1923). An ardent political Nonconformist. Wrote numerous religious works. Twice President of the Baptist Union, also President of the National Council of Free Evangelical Churches.
- Clive, Robert, Lord** (1725-1774), went out to India as a clerk in the service of the East India Company when 17, and during the diplomatic difficulties which arose between England and France attracted the attention of his superiors by some able suggestions for the curbing of the French influence. In the war that followed he was given a command and displayed such remarkable military genius that he virtually became Commander-in-Chief. In the troubles that followed with the native rulers, he was equally resourceful, and succeeded in laying the foundation of the British Empire in India on a secure basis. On his return to England in 1760 he was raised to the peerage. His later years were marked by mental disturbance and ultimately he committed suicide.
- Clovis** (c. 465-511) was the founder of the Merovingian-line of Frankish kings, and a convert to Christianity. He defeated the Burgundians and West Goths, and fixed his court at Paris.
- Clyde, Sir Colin Campbell, Baron, K.C.B.** (1792-1863), a British Field-Marshal who served in the Peninsular and Crimean wars. Made a great reputation as Commander-in-Chief in India during the Mutiny.
- Coates, Albert** (1882-1953), was the principal conductor of the Imperial Opera, Petrograd; a famous conductor at Covent Garden, New York and other musical centres.
- Cobbett, William** (1762-1835), a politician and controversialist, who, through the medium of his *Political Register*, attacked both Radical and Tory in turn. Entered Parliament in 1832.

In 1830 his *Rural Rides* were published in book form.

**Cobbold**, Cameron Fromanteel (b. 1904), Governor of the Bank of England since 1948.

**Cobden**, Richard (1804-1865), the son of a Sussex farmer, who afterwards became a commercial traveller, and during the Corn Law Agitation came into great prominence as an advocate of Free Trade. He devoted himself so completely to this cause, that for some years he entirely neglected his business affairs and in recognition of his services a subscription of £80,000 was raised for him in 1845, and in 1860 a further sum of £40,000. He entered Parliament in 1841, and except for an interval of two years remained a member till his death. In 1860 he negotiated a commercial treaty with France which was of great benefit to the trade of this country. Titles and other honours were offered to him but declined.

**Cochran**, Sir Charles Blake (1872-1951), a prominent English theatrical manager and producer who began as an actor in America. Among his many successes were *Bitter Sweet*, *Cavalcade*, and a number of brilliant revues.

**Cockcroft**, Sir John Douglas, K.C.B., C.B.E., M.A., Ph.D., F.R.S. (b. 1897), Cambridge nuclear physicist; director of the Atomic Energy Research Estab. at Harwell since 1946. Shared with Dr. E. T. S. Walton 1951 Nobel Prize for physics for "pioneer work on the transmutation of atomic nuclei by artificially accelerated atomic particles".

**Cocoteau**, Jean (b. 1891), French writer and artist whose achievements in widely varied forms of art have been prodigious. Elected to the Académie Française in 1955.

**Cody**, Samuel Franklin (1861-1913), British aviator, born in U.S.A., but became a naturalised British subject. He was the first man to fly in Great Britain—making a flight of 27 minutes in October 1908 in the first practical British flying-machine of his own make. Was killed while flying in 1913.

**Cody**, William Frederick (1846-1917), American showman, known as "Buffalo Bill," who in 1883 founded his great Wild West show.

**Cohn**, Ferdinand Julius (1828-1898), the famous German bacteriologist, of which science he was the virtual founder.

**Coke**, Sir Edward (1552-1634), Chief Justice, rival of Bacon, wrote the *Institutes*, etc., to expound the Common Law, which he also championed in the Courts and in Parliament. His extensive legal erudition added many new interpretations to the Common Law system and helped to ensure its survival.

**Colbert**, Jean Baptiste (1619-83), French statesman, who fostered new industries and encouraged commerce, endeavoured to reform the finances, and established the French Navy on a sound basis. A patron of literature, science, and art.

**Cole**, George Douglas Howard, M.A. (b. 1889), the well-known English economist and author. Chichele Professor of Social and Political Theory at Oxford. Has written many books on social and economic problems including *The Intelligent Man's Guide through World Chaos*, 1932, and has also written (with his wife) *The Intelligent Man's Review of Modern Europe* and *A Guide to Modern Politics*, 1934; and, also with his wife, many popular detective stories.

**Coleridge**, 1st Baron (1820-94), Lord Chief Justice of England from 1880 until his death. Was a distinguished scholar, orator and barrister, his most famous case being the Tichborne trial in 1871, when his speech for the defence lasted 23 days.

**Coleridge**, Samuel Taylor (1772-1834), one of the great poets of the early part of the 19th century, whose *Ancient Mariner* and a few other poems stand unsurpassed for poetic beauty and originality.

**Coleridge-Taylor**, Samuel, A.R.C.M. (1875-1912), English composer, son of a negro physician of Sierra Leone and an Englishwoman. He studied at the Royal College of Music in London. Best known for his cantata *Hiawatha*.

**Colet**, John (1467?-1519), humanist and divine, founded St. Paul's School, 1512. As scholar and friend of Erasmus he helped to bring the New Learning to England.

**Colette**, (Sidonie Gabrielle Claudine Colette) (1873-1954), author of a number of highly successful

novels including the famous *Claudine* stories, *Chéri* and *La Fin de Chéri*. Grand Officier de la Légion d'Honneur (1953).

**Collier**, Hon. John (1850-1934), English painter who became highly popular for his "problem" pictures. He is best remembered, however, as a distinguished portraitist.

**Collingwood**, Lord (1750-1810), British admiral whose ship the *Royal Sovereign* led the fleet to battle at Trafalgar and who on Nelson's death assumed the command.

**Collins**, Michael (1890-1922), was General C.-in-C. Irish Free State forces; Minister of Finance, 1921-22; Chairman of Provisional Gov. of Irish Free State, Jan.-August, 1922. Shot in ambush Aug., 1922.

**Collins**, William, R.A. (1788-1847), a noted landscape and figure painter, and father of Wilkie Collins.

**Collins**, William Wilkie (1824-1889), the novelist, was for many years associated with Charles Dickens, and wrote *The Dead Secret*, *The Woman in White*, and *No Name*.

**Colt**, Samuel (1814-1862), of Hartford, Connecticut, invented the revolver and patented it in 1835. It was some time before its utility was recognised, but after being used with great effect in the war with Mexico it was universally adopted.

**Columba**, St. (521-597), the founder of the monastery of Iona, was a native of Ireland. From his lonely island shrine he made frequent missionary journeys to the Highlands of Scotland, where he made many converts and was greatly revered.

**Columbus**, Christopher (c. 1446-1506), the famous Italian navigator, who, prevailing upon Ferdinand and Isabella of Spain to bear the expense of an expedition of discovery, set out on his first voyage in 1492. He first discovered the Bahamas, Cuba, and other West Indian islands, and, on his third voyage, in 1498, landed on the lowlands of South America.

**Colvin**, Sir Sidney (1845-1927), friend of R. L. Stevenson and biographer of Keats. Was Keeper of Prints at the British Museum, 1884-1912. Author of numerous works on art and literature.

**Combe**, Andrew (1797-1847), a celebrated physician, who was the author of several works on phrenology and physiological science, and was appointed physician to Queen Victoria in 1838.

**Combe**, George (1788-1858), elder brother of the above; an eminent philosopher and author, who first introduced phrenology into Britain. Both the brothers Combe were born in Edinburgh.

**Comenius**, Johann Amos (1592-1670), famous Czech educationist. Was the first advocate of the "direct" method of teaching languages, of the use of pictures in education, and of the teaching of science.

**Compton**, Prof. Arthur Holly (b. 1892), American physicist and Professor of Physics at Chicago University since 1923. His work on X-Rays established what is known as the Compton Effect, 1923. Was awarded the Nobel Prize for physics 1927, and has been honoured by the scientific societies of many countries. He directed the world survey of cosmic rays, 1931-33. His brother Karl Taylor Compton (b. 1887) is also a physicist who has taken an important part in radar and atomic bomb research.

**Compton**, Fay (b. 1894), English actress, whose numerous successes include performances in *Peter Pan*, *Romeo and Juliet* and other plays. Has also made successful appearances in films in England and at Hollywood.

**Compton-Burnett**, Ivy, British novelist, whose books deal with family relationships and include *Men and Wives*, *A House and its Head*, *Man Servant and Maid Servant*, *The Present and the Past*.

**Comte**, Auguste (1798-1857), a French philosopher, founder of positivism, and father of social philosophy.

**Condé**, Louis II., de Bourbon, Prince de, "The Great Condé" (1621-1686), was a distinguished military commander. Victor of Rocroi, 1643.

**Confucius** (c. 551-479 B.C.), Chinese philosopher and sage, founder of the great world religion of Confucianism. He was not concerned with the supernatural but appealed to reason and taught love and respect of one's fellows, superiority to ambition, charity, forgiveness, and repentance.

- Congreve, William (1670-1729), was a famous Restoration dramatist, whose comedies of manners reflect the grossness of his age only too closely, but are redeemed by the brilliancy of his wit. He was buried in Westminster Abbey.
- Conrad, Joseph (1857-1924), novelist and master in the merchant service, who wrote some fine sea stories, strong in plot, and full of the true salt flavour. He was a Pole by birth but had for many years resided in England when on land. His first novel of note was *Almayer's Folly*, 1895.
- Conscience, Hendrik (Henri) (1812-83), the famous Flemish novelist who wrote in 1838 his beautiful work *The Lion of Flanders*.
- Constable, John, R.A. (1776-1837), was a native of East Bergholt, Suffolk, and became one of the greatest of English landscape painters. He had long to wait for recognition, but ultimately attained high honour and exerted a strong influence in the development of landscape art.
- Constant, Jean Joseph Benjamin (1845-1902), a famous French painter of Oriental subjects and portrait painter. His "Prisoners in Morocco," "The Harem," and "The Emir's Favourite," are among his more celebrated pictures.
- Constantine the Great (c. 272-337). Emperor of Rome from 306 to his death. Transferred the Capital of the Empire from Rome to Byzantium, thence called Constantinople after his name.
- Constantine I. (1868-1923), King of Greece, 1913-17, and 1920; married Princess Sophia of Prussia, sister of the Kaiser.
- Cook, Captain James (1728-1779), an adventurous navigator, whose *Voyages Round the World* is a classic. He made many discoveries in the name of Great Britain, including the Sandwich (now Hawaiian) Islands. He was murdered at Hawaii by natives.
- Cooper, Sir Astley Paston, Bt., F.R.S. (1768-1841), one of the greatest surgeons of his time, and the author of several important medical textbooks.
- Cooper, James Fenimore (1789-1851), was a very popular American novelist, who from about 1820 to the time of his death produced a succession of stirring stories of adventure, which enjoyed much popularity, among them *The Spy*, *The Last of the Mohicans*, *The Pathfinder*, and *The Deer Slayer*.
- Cope, Sir Arthur Stockdale, K.C.V.O., R.A. (1857-1940), was a well-known portrait painter.
- Copernicus, Nicholas (1473-1543), founder of modern astronomy, was born at Thorn on the Vistula, then under Polish suzerainty. Studied at Cracow and in Italy, lectured on astronomy and mathematics at Rome and in 1512 settled at Frauenburg, where he was canon of the cathedral. He also practised medicine. His beliefs concerning the universe were set forth in his great book *De revolutionibus orbium coelestium*, which was not published until his death for fear of the storm his revolutionary theories would raise. In it he proved that the planets, including the earth, revolve round the sun.
- Coppée, François Edouard Joachim (1842-1908), one of the most popular of modern French writers, who as poet, novelist and dramatist, was equally successful.
- Coquelin, Benoit Constant (1841-1909), eminent French actor ("Coquelin aîné"), and Coquelin, Ernest ("Coquelin cadet"), his youngest brother (1848-1909), were leading lights of the Théâtre Français.
- Corelli, Marie (1864-1924), a novelist whose works had a very extensive circulation and cover a wide field of observation. Since the publication of her first novel, *A Romance of Two Worlds*, in 1886, was constantly before the public. *Barabbas*, *The Sorrows of Satan*, *The Master Christian*, *The Treasure of Heaven*, are characteristic works.
- Corneille, Pierre (1606-1684) the French tragic dramatist, whose *Cid*, *Polyeucte*, *Le Menteur*, and other plays marked a new era in French dramatic production.
- Cornwallis, 1st Marquess (1738-1805), commander of the British forces which surrendered to the Americans, at Yorktown in 1781, thus ending the War of Independence; was twice Governor-General of India.
- Corot, Jean Baptiste (1796-1875), a French landscape painter of great repute.
- Correggio, Antonio Allegri da (1494-1534), the great Italian painter of the Lombard School, whose "Ecce Homo" is in the British National Gallery.
- Cortes (or Cortez), Hernando (1485-1547), a Spanish adventurer who earned great renown by capturing Mexico for Spain, and held that country in subjection for ten years.
- Cortot, Alfred (b. 1877), eminent pianist, born at Nyon, Geneva, and studied at Paris Conservatoire and became chorus director at Bayreuth. Conducted the first complete performance in Paris of Wagner's *Ring*.
- Cosgrave, William Thomas (b. 1880), President of Executive Council, Irish Free State, 1922-32; Finance Min., 1923; Defence Min., 1924; Parl. Chairman Fine Gael, 1933-44.
- Costello, John A., S.C. (b. 1891), Prime Minister of Irish Republic 1948-51 and since 1954. When Attorney General, Irish Free State, 1926-32, helped to draft the Statute of Westminster.
- Cotton, Henry, M.B.E. (b. 1907), England's leading golfer. Open Champion in 1934, 1937, and 1948. Formerly professional at Royal Mid-Surrey Club.
- Coty, René (b. 1882), President of the French Republic, 1954.
- Coulton, George Gordon, Litt.D., LL.D. (1858-1947), scholar and historian of the Middle Ages, whose main claim to fame rests upon *Five Centuries of Religion*, works in which he set forth his interpretation of monastic history in England from the Conquest to the Reformation.
- Courtneidge, Cicely, C.B.E. (b. 1893), English actress, born in Sydney, she made her stage debut in Manchester in 1901. After six years in Australia she appeared in London in 1907 in *Tom Jones*, and thereafter in musical comedy, including *The Arcadians*. Later she appeared in Revue and Music-Hall performances. She married Jack Hulbert, comedian and producer.
- Cousin, Victor (1792-1867), a French philosopher who founded what is called the Eclectic school of Modern Philosophy. His writings cover nearly the whole field of philosophy.
- Cousins, Samuel, R.A. (1801-1887), the greatest mezzotint engraver of his day, whose plates after Reynolds, Millais, Landseer, and Hogarth reach the highest point of this kind of art work.
- Coverdale, Miles (1488-1568), one of the early English Reformers, was born in Yorkshire, and afterwards became a monk of Norwich and later Bishop of Exeter. He collaborated with Tyndale in translating the Bible; the Psalms still used in the Prayer Book are taken from their translation.
- Coward, Noel (b. 1899), a successful English playwright and actor. His works include *Hay Fever*, *Private Lives*, *Blithe Spirit*, the operetta *Bitter Sweet* and the films *In Which We Serve*, *This Happy Breed*, and *Brief Encounter*.
- Cowper, William (1731-1800), an English poet imbued with much piety of sentiment and a remarkable poetic talent. His *Task* is one of the great poems of the 18th century.
- Cox, David (1783-1859), an eminent landscape painter—son of a Birmingham blacksmith—whose pictures are thoroughly English in spirit and treatment.
- Crabbe, Rev. George (1754-1832), a poet of rural life and scenes, noted for his faithful pictures, characterisation and soundness of his sentiments.
- Craig, Edward Gordon (b. 1872), the son of the late Dame Ellen Terry, author of several books on stagecraft. Has produced many plays in England and on the Continent.
- Crane, Walter, R.W.S. (1845-1915), first President of the Arts and Crafts Exhibition Society and holder of the Albert Gold Medal. Painted many notable pictures, and his works on decorative art are of great value.
- Cranmer, Thomas (1489-1556), Archbishop of Canterbury under Henry VIII. and Edward VI.; an ardent promoter of the Reformation. On Mary's accession at first consented to return to the old faith, but when called upon to make public avowal of his recantation, refused, and was burnt at the stake. Translator and author of much of the Book of Common Prayer.
- Crawford, Francis Marion (1854-1909), an American novelist who obtained considerable eminence by his stories of Italian life, including *A Roman Singer*, *Saracinesca*, and *Saint Iharlo*.
- Crerar, Gen. Henry Duncan Graham, C.H., C.B., D.S.O. (b. 1888), Canadian military leader.

- Rose to Lt.-Col. in first world war. Commanded 1st Canadian Army, N.W. Europe, 1944-46.
- Crichton, James** (1560-1582), a Scotoman, who earned considerable renown for his gifts of learning and general accomplishments and was called "The Admirable Crichton." He was assassinated when only twenty-two years of age in Mantua.
- Crichton-Browne, Sir James, M.D., F.R.S., F.R.S.E.** (1840-1938), was a famous specialist in mental disorders and Visitor in Lunacy for the Lord Chancellor's department 1875-1922.
- Cripps, Rt. Hon. Sir (Richard) Stafford, C.H., Q.C.** (1889-1952), British statesman and barrister, younger son of Lord Parmoor and nephew of Beatrice Webb. In charge of post-war Britain's economic affairs. His programme was one of purposeful austerity, but his outstanding ability and masterly exposition of the economic situation won him support from all sides. He showed that liberty and planning can be reconciled in the modern world. Labour M.P. for S.E. Bristol, 1931-50. Gave up a brilliant career at the bar to enter politics. Ambassador to Moscow, 1940-42, and Min. of Aircraft Production, 1942-45. Went on missions to India in 1942 and 1946. Resigned his seat in Parliament and as Chancellor of the Exchequer in 1950 because of broken health; was taken to Switzerland for a cure, but he did not recover.
- Crispi, Francesco** (1819-1901), noted Italian statesman, who aided Garibaldi and was his supporter throughout. Premier 1887-91 and 1893-96. Achieved many reforms for his country.
- Crispin, St.**, a saint of the Roman Church and patron of shoemakers. In the 3rd century he and his brother, natives of Rome, settled in Soissons, France, and there preached Christianity, supporting themselves by shoemaking. Suffered martyrdom in 287, by being thrown into a cauldron of molten lead; commemorated on Oct. 25.
- Croce, Benedetto** (1866-1952), Italian philosopher and critic and one of the great figures of the 20th century. Devoted his long life to studying and writing, and his philosophy is expounded in the four volumes of *Filosofia dello Spirito* (which have been translated into English). He founded and edited *La Critica* in 1903, a review of literature, history, and philosophy. Strongly opposed to fascism, he was described during the war as "the grand old man who kept a torch burning in Naples which even Mussolini did not dare to extinguish."
- Cresus** (died c. 546 B.C.), the last King of Lydia (560-546 B.C.), who reigned fourteen years, and acquired such immense wealth that his name has ever since been proverbial. He was a wise king, whose memory still survives in his wise sayings. Solon was his friend, and it was Solon's name that he uttered thrice while standing before the pyre on which Cyrus had condemned him to be burnt. This touched Cyrus, who spared his life and made him his companion. He succeeded his father Alyattes on the Lydian throne, 560 B.C.
- Crofts, Ernest, R.A.** (1847-1911), was keeper of the Royal Academy, and one of the most noted painters of battle pictures.
- Crome, John** (1769-1821), known as "Old Crome," from being a humble house-painter became eminent as a painter of landscape.
- Cromer, 1st Earl of, P.C., G.C.B., O.M., G.C.M.G., K.C.S.I., C.I.E., F.R.S.** (1841-1917), a diplomatist who won celebrity in the post of British Comptroller-General in Egypt from 1883 to 1907. It was a stupendous task that he had imposed upon him, but he resolutely devoted himself to it, with the result that Egypt was lifted from financial difficulty and internal disorder to a condition of prosperity. In 1908 published *Modern Egypt and Ancient and Modern Imperialism* in 1910.
- Crompton, Samuel** (1753-1827), was a poor cotton worker at Bolton who invented the spinning mule, which greatly increased the power of cotton production. In spite of ceaseless toil, he received little recognition.
- Cromwell, Oliver** (1590-1658), Lord Protector of England from 1653 to his death. At one time contemplated emigrating to America, but, entering Parliament and becoming enthusiastic in the popular cause, obtained recognition as one of the Parliamentary leaders, and ultimately, on the outbreak of the Civil War, became General of the Roundheads. How he gained battle after battle, and after the execution of Charles I. was installed at the head of the Commonwealth, is familiar history.
- Cromwell, Richard** (1626-1712), son of the foregoing, and his successor in the Protectorate.
- Cromwell, Thomas** (1485-1540), originally a protégé of Wolsey, rose to high office under Henry VIII and began the suppression of the monasteries. Executed after the failure of the Anne of Cleves marriage, which was part of his policy of alliance with the Protestant princes of Germany.
- Crookes, Professor Sir William, O.M., F.R.S.** (1832-1919). President of the Royal Society, Nov., 1913 to 1916. An eminent British scientist, whose discoveries in chemistry and electricity have been of the greatest importance. Was a past-president of the British Association, and the author of many books on chemical subjects. The discoverer of thallium and inventor of the radiometer.
- Cruikshank, George** (1792-1878), a celebrated book illustrator who was for a time associated with Charles Dickens, and later on illustrated numerous works of other novelists of his day, showing great humour and power of character-delineation.
- Cummings, Bruce Frederick** (1889-1917), English zoologist and man of letters. Won fame with his *Journal of a Disappointed Man*.
- Cunard, Sir Samuel, Bt.** (1787-1865), shipowner and co-founder of the British and N. American Royal Mail Steam Packet Co. which later became the Cunard Line and as a result of a merger in 1934, the Cunard-White Star Line. Owners of the two largest liners afloat—the *Queen Elizabeth* and the *Queen Mary*.
- Cunningham of Hyndhope, Admiral of the Fleet, Viscount, K.T., G.C.B., O.M., D.S.O.** (b. 1883), won the D.S.O. and two bars in the first world war. C.-in-C. Mediterranean, 1939-42. Allied Naval C.-in-C. North African campaign. First Sea Lord, 1943-46.
- Cunningham, General Sir Alan Gordon, G.C.M.G., K.C.B., D.S.O., M.C.** (b. 1887), brother of Viscount Cunningham. Directed Abyssinian campaign and commanded 8th Army, 1941. From 1945 served as the last British High Commissioner in Palestine.
- Cunningham, Admiral of the Fleet, Sir John Henry Dacres, G.C.B., M.V.O.** (b. 1885), C.-in-C. Mediterranean, 1943-46. First Sea Lord 1946-48.
- Cunninghame-Graham, Robert Bontine, J.P.** (1852-1936), was a well-known author who wrote numerous works on Spanish-American life.
- Curie, Prof. Pierre** (1859-1906) and **Madame Marie** (1867-1934) are names that have become famous as the discoverers of radium. M. Curie was a Frenchman, Mme. Curie a Pole; they were both indefatigable scientific investigators. Shared the Nobel Prize for Physics 1903, while their daughter, Mme. Irene Joliot-Curie, shared with her husband, M. Joliot, the 1935 Nobel Prize for Chemistry, awarded for their researches in radio-activity.
- Curtis, Dame Myra, D.B.E., M.A.** (b. 1886), Principal of Newnham College, Cambridge, 1942-54. Civil Servant, 1915-41. Chairman of the Royal Commission on Children Deprived of a Normal Home Life, which produced the Curtis Report. Many of its recommendations are embodied in the Children Act, 1948.
- Curzon of Kedleston, Marquess, K.G., P.C., G.C.S.I., G.C.I.E.** (1859-1925), statesman and administrator. As a young man gained distinction as traveller and author. From 1899 to 1905 was a vigorous and outstanding Viceroy of India. Foreign Secretary, 1919-24, when he played a dominant part in the reconstruction of the Middle East and was prominent at many conferences after the first world war.
- Cuthbert, St.** (635-687), a famous monk who became prior of Melrose, and afterwards of Lindisfarne. For a time he lived in seclusion on one of the Farne Islands, but from 684 was Bishop of Hexham.
- Cuvier, Georges Leopold, Baron** (1769-1832), a French naturalist who founded a system of

classification in zoology, and originated the science of comparative anatomy.

**Cuyp, Albert** (1620-1691), a famous Dutch landscape painter, several of whose works are in our National Gallery.

**Cyprian, St.**, was an eminent ecclesiastic of the 3rd century, who wrote several notable treatises on matters of Christian doctrine. He was beheaded in 258, at an advanced age, and the present English calendar commemorates him on Sept. 26.

**Cyrus the Great** (c. 600-529 B.C.), founded the Persian monarchy in the 5th century B.C. and greatly distinguished himself by his conquests of Media, Assyria, Babylon, parts of India, Arabia and Asia Minor, and was eventually slain in battle, it is believed, with the Mes-sages on the river Jaxartes.

**D**

**Daguerre, Louis Jacques Mandé** (1789-1851), a French artist, who acquired fame as the inventor of the earliest photographic process, and then devoted himself to scene-painting and became part proprietor of the Diorama in Paris.

**Daimler, Gottlieb** (1834-1890), German inventor with N. A. Otto of Cologne of the Otto gas engine, and in his later years eminent as the inventor of the motor-car that is named after him.

**Daladier, Edouard**, (b. 1884), French politician, Premier of France April 1938 to March 1940, previously from Jan.-Oct. 1933 and for a few days in Jan. 1934.

**Dale, Sir Henry Hallett, O.M., G.B.E., F.R.S., M.D., D.Sc., LL.D., F.R.C.P.** (b. 1875). President, British Association, 1947, and of the Royal Society, 1940-45. Adviser to the B.B.C. on scientific programmes, 1950. Awarded Nobel Prize for Medicine, 1936.

**Dalhousie, 1st Marquess of, P.C., K.T.** (1812-1860). The tenth Earl and first Marquess of Dalhousie was one of the most famous of India's Governors-General. He controlled the affairs of India during a period of great difficulty, and annexed the Punjab after the second Sikh War; later on also annexing Nagpur, Jhambli, Pegu and other States. He left India in 1856, and the following year the Mutiny broke out.

**Dalton, John** (1766-1844), famous chemist and mathematician, renowned for his work on the constitution of matter. In 1810 published his *New System of Chemical Philosophy*, in which the atomic theory was first propounded.

**Damien, Father (Joseph de Veuster)** (1840-1889), a Belgian missionary who, going out to Honolulu in 1864, and witnessing the terrible sufferings of the lepers confined on the Island of Molokai, obtained permission to take spiritual charge of the Government settlement, and remained there working nobly for this wretched community, until in 1889 he himself was stricken with leprosy and died.

**Damocles, the flatterer and favourite of Dionysius of Syracuse.** The legend related by Cicero concerning him is that one day after expressing envy of Dionysius, he was invited to a banquet, where he found himself sitting beneath a naked sword suspended by a single hair. Hence the familiar simile "the sword of Damocles." The incident is referred to as of the first half of the 4th century B.C.

**Damrosch, Walter Johannes** (1862-1950), American musician, active in the musical development of the United States. Conductor of the New York Symphony Society, 1885-1927, and composer of three operas and of incidental music to Greek plays.

**Dane, Clemence, C.B.E.** (Winifred Ashton), author of *Regiment of Women*, *A Bill of Divorcement*, and *Will Shakespeare*, amongst many successful novels and plays.

**D'Annunzio, Gabriele** (1863-1938), Prince of Monte Nevoso, 1924, the Italian poet, dramatist and novelist, and one of the more remarkable literary men in Europe. Served European War 1915-18 (wounded). In Sept. 1919 he led an unofficial raid on Fiume and seized the port and town. When the Treaty of Rapallo was signed in 1920, D'Annunzio refused to recognise the Treaty, and declared war against Italy. Fiume

was attacked and D'Annunzio, after a short resistance, surrendered.

**Dante Alighieri** (1265-1321), the greatest of Italian poets, was born in Florence in a period of political upheaval. Wrote some of his finest work after he was driven from his native city in 1301. Though he met her but once or twice, he conceived an abiding love for Beatrice Portinari whom he first met in 1274. His *Divina Commedia* is the greatest poem of the Middle Ages and has been translated into all languages.

**Danton, Georges Jacques** (1759-1794), a famous member of the National Convention at the period of the first French Revolution. Was made President of the Committee of Public Safety, but Robespierre attacked and supplanted him. Danton was consigned to the guillotine shortly afterwards.

**D'Arblay, Madame** (1752-1840), better known as Frances (Fanny) Burney, daughter of Charles Burney, made a great sensation while quite young and unmarried by her novel *Evelina*, which opened the doors of Society to her and gained her the friendship of Dr. Johnson.

**Darius** was the name borne by three Persian kings. The first reigned from 521 to 485 B.C., and was defeated by the Greeks at Marathon. The second was a natural son of Artaxerxes Longimanus, and having obtained the crown by the murder of his brother, reigned from 424 to 405 B.C. The third Darius was the last of the Persian kings, reigning only from 336 to 331 B.C. when Alexander the Great invaded his kingdom and defeated him in two great battles. Soon after he was assassinated.

**Darling, Grace Horsley** (1815-1842). By the performance of her heroic deed in putting off in a small boat from the lighthouse on one of the Farne Islands, of which her father was keeper, to the rescue of the shipwrecked crew of the *Forfarshire*, whose lives she saved, she made herself an enduring name. She was only 23 years of age at the time, and died four years later of consumption.

**Darnley, Earl of** (1545-1567), was married to Mary Queen of Scots—as her second husband—in 1565. Two years later, after Mary had entered into an intrigue with Bothwell, he was murdered.

**Darrow, Clarence Seward** (1857-1938), famous American lawyer. He practised in Chicago for more than 50 years, and was the foremost criminal advocate in America for more than half that period. Appeared as counsel for the defence in a number of important cases of world-wide interest, among them the Debs Strike Case (1895), the Steuenburg Murder (1907), Macnamara Case, at Los Angeles (1911) and last but not least the Dayton Monkey Trial (1925) or Evolution Trial.

**Darwin, Charles Robert, F.R.S.** (1809-1882), the distinguished scientist, whose *Origin of Species* first clearly formulated and elaborated the theory of evolution. His first work (1837) described a five years' cruise in the *Beagle*, which the Government had sent out for scientific purposes. His *Origin of Species* appeared in 1859, and, though defended and supported by the scientific thought of the time generally, was much attacked by theologians. In 1871 Darwin issued his *Descent of Man*, a still further elaboration of the evolution theory. His other principal works were *The Expression of Emotion in Man and Animals* (1872), *Insectivorous Plants* (1875), *Different Forms of Flowers* (1877), and *Worms* (1881). He was buried in Westminster Abbey.

**Daudet, Alphonse** (1840-1897), the celebrated French humorist and novelist, all of whose works have been translated into English.

**Davenant, Sir William** (1606-1668), a dramatist and poet of much note in his time, who filled the office of Poet Laureate in succession to Ben Jonson. He was buried in Westminster Abbey.

**David I.** (1084-1153) was King of Scotland and uncle of Matilda, daughter of Henry I.; he took up arms against Stephen on his repudiation of Matilda's claims to the English crown.

**David II.** (1324-1371), King of Scotland from 1330 to 1370. He was the son of Robert Bruce, and in conflict with the English Army at Neville's Cross, in 1346, was defeated and made prisoner by Queen Philippa.

- David, Sir (Tannatt William) Edgeworth, K.B.E., C.M.G., D.S.O., F.R.S. (1858-1934)**, an Australian geologist of the first rank, who was Professor of Geology at Sydney University 1891-1924. Spent much of his time in exploration, and accompanied as geologist Shackleton's Antarctic Expedition, 1907-9, leading the party that ascended Mt. Erebus, and discovering with Sir Douglas Mawson the South Magnetic Pole.
- David, Jacques-Louis (1748-1825)**, a celebrated French painter of classic subjects, who put his art at the service of the New Republic.
- David, St.**, patron saint of Wales, whose festival falls on March 1st, lived in the 6th century in Wales, and founded various monasteries.
- Davidson, Randall Thomas Davidson, 1st and only Baron, P.C., G.C.V.O. (1848-1930)**, Archbishop of Canterbury, 1903-1928. Dean of Windsor, 1883-1891; Bishop of Rochester, 1891-1895; and Bishop of Winchester, 1895-1903. Was for a long period Domestic Chaplain and Clerk of the Closet to Queen Victoria, and married in 1878 the daughter of Archbishop Tait.
- Davies, Rt. Hon. Clement, Q.C., M.P., (b. 1884)**, lawyer and politician. Called to the Bar, 1909, took silk, 1926. Leader of the Liberal Party, and has represented Montgomery since 1929.
- Davies, Sir (Henry) Walford, K.C.V.O., O.B.E., Mus.D., D.Mus. (1869-1941)**, Master of the King's Music, 1934-41; Director of Music and Chairman of the National Council of Music, University of Wales, 1919-41, and Gresham Prof. of Music, 1924-41.
- Davies, William Henry (1871-1940)**, was a Welsh poet who spent his early life as a tramp and odd-job man. For six years he wandered about America, where he lost a foot "train-jumping," and for eight years followed a similar life in England, tramping, peddling and stopping in common lodging-houses. His poems reveal an intimate knowledge of and love for Nature. An account of his life is given in his *Autobiography of a Super Tramp*.
- Da Vinci. See Leonardo.**
- Davis, Jefferson, (1808-1889)**, an American statesman, who on the breaking out of the Civil War, was made President of the Confederate States. After the war he was a prisoner in the hands of the Federals, put on his trial for treason, and subjected to much indignity, but was ultimately discharged and wrote (1881) *The Rise and Fall of the Confederate Government*.
- Davis, John (c. 1550-1605)**, one of the great Elizabethan explorers and discoverer of Davis's Strait, the channel between the Atlantic and Arctic Oceans on the west of Greenland. Invented the backstaff, or Davis's quadrant.
- Davitt, Michael (1846-1906)**, after a hard-working and precarious bringing up this ardent Irish Nationalist attracted much notice by the bitter speeches he made on behalf of the Fenian Brotherhood, and in 1870 was sentenced to fifteen years penal servitude for treason-felony, but was released on ticket of leave in 1877. Was one of the founders of the Irish Land League 1879. In 1881 was sent back to penal servitude, but released again in the following year. Was elected to Parliament while a prisoner at Portland but disqualified. Succeeded in entering Parliament in 1892, and resigned in 1899.
- Davy, Sir Humphry, Bt., F.R.S. (1778-1829)**, the inventor of the safety-lamp. Was an eminent chemist whose researches and discoveries were of great scientific importance. Was the first to employ the electric current in chemical decomposition and discovered that nitrous oxide was perfectly respirable.
- Dawber, Sir (Edward) Guy, R.A. (1861-1938)**, English architect. As Chairman of the Council for the Preservation of Rural England, he did much to bring about the restoration of buildings throughout the country.
- Dawson, (George) Geoffrey (1874-1944)**, editor of *The Times*, 1912-19, and 1923-41; educated at Eton and Oxford; was private secretary to Lord Milner in S. Africa, 1901-5, editor of the *Johannesburg Star*, 1905-10.
- Dawson, Peter (b. 1882)**, British singer, born in Adelaide, South Australia, and the possessor of a magnificent baritone voice.
- Deakin, Rt. Hon. Arthur, C.B.E., J.P. (1890-**
- 1955)*, Trade Union leader; succeeded Ernest Bevin as general secretary of the Transport and General Workers' Union in 1949 and like him was a master negotiator.
- Debussy, Claude Achille (1862-1918)**, composer and founder of the French Impressionist School in music. Among his works are *Suite bergamasque*, containing the popular  *Clair de lune*, *L'après-midi d'un Faune*, inspired by the poem of Mallarmé, and *La Mer*. He also wrote an opera *Pelléas et Mélisande* based on Maeterlinck's drama. Biography by Edward Lockspeiser (1937).
- De Falla, Manuel (1876-1946)**, a noted Spanish composer, best known in England for his enchanting ballet, *The Three-Cornered Hat*, which was one of Diaghilev's greatest successes after the first world war.
- Defoe, Daniel (1660-1731)**, the son of a London butcher. He became a political writer and novelist, obtaining world-wide fame by his *Robinson Crusoe*, written when he was nearly sixty years of age. This was followed by several other novels, all of great merit.
- De Forest, Lee (b. 1873)**, American inventor who was the first to use alternating-current transmission, improved the thermionic valve detector and amplifier, which revolutionised wireless and by which modern wireless and sound films (Talkies) were made possible. He designed the first high-power station for the United States Navy and has been granted over 300 patents.
- De Gasperi, Alcide (1881-1954)**, Italian catholic politician. Founded the Christian Democrat Party and worked for European federation. Died on eve of breakdown of Brussels Conference on E.D.C. Prime Min. 1945-53.
- De Gaulle, Gen. Charles A. J. M. (b. 1890)**, was Colonel commanding a tank brigade of the French Army in 1939, with advanced ideas on mechanised warfare. On the collapse of France in 1940 he refused to surrender, but raised and led the Free French fighting forces, with headquarters in England and the Cross of Lorraine as their badge. Since the new constitution which set up the Fourth Republic he has refused to ally himself with any of the existing political parties. The "Rally of the French People" which he founded in 1947 in opposition to the left wing ceased to take part in Parliamentary life in 1953.
- De Havilland, Sir Geoffrey, C.B.E., F.R.Ae.A. (b. 1882)**, a pioneer of civil and military aviation. Began flying in 1908 and was the founder of the Stag Lane Aerodrome at Hendon and the designer of the famous Moth machines. Contributed in great measure to the advance of civil aviation since the first world war. Awarded the Guggenheim Medal in 1952. His son was killed in 1946 while testing a plane in preparation for breaking world speed record.
- Delacroix, Ferdinand Victor Eugène (1798-1863)**, French painter of great imaginative and dramatic force, of the romantic school.
- De la Mare, Walter John, O.M., C.H., (b. 1873)**, an imaginative writer whose most popular works are *Henry Brocken*, *Memoirs of a Midget*, and *The Connoisseur*.
- Delane, John Thadeus (1817-1879)**, the famous editor of *The Times*, who, though he did not write himself, made his paper the greatest journal in the world. He occupied the editorial chair from 1841 to 1877.
- Delaroche, Paul (Hippolyte) (1797-1856)**, an eminent French historical painter.
- Delibes, Clément Philibert Léo (1836-1891)**, a French composer of much graceful and refined music, including two or three operas, numerous operettas, and some exquisite ballet music.
- Delius, Frederick, C.H. (1862-1934)**, one of the few really great English composers since Purcell. Born of German parents at Bradford he early showed a taste for music and became a proficient violinist. Put to a commercial career by his father, he found the life intolerable, and at the age of 20 he went to Florida, where he worked for two years as a planter. Devoting his leisure to music, he became largely self-taught, and on his return home entered the Leipzig Conservatoire. He then settled in France at Grez-sur-Loing, but his later years were much troubled by a partial blindness. He published his first work in 1892 and began

- slowly to produce a succession of compositions, the full beauties of which were not generally realised until recent years by the musical public. Partly owing to the indefatigable work of Sir Thomas Beecham he gradually won popularity in England.
- Democritus** (c. 460-357 B.C.), the Greek philosopher to whom the conception of the atomic theory is attributed. His cheerful disposition led to his being styled "the laughing philosopher," and the tradition tells that he put out his eyes in order to prevent being distracted in his speculations.
- De Morgan, William Frend** (1839-1917), son of Augustus de Morgan (1806-71), was engaged in artistic pursuits until 1906, when he surprised the novel-reading world by a remarkably clever story of humour, character, and observation entitled *Joseph Vance*. His later novels include *Alice-for-Short* (1907), *Somehow Good* (1908), and *When Ghost Meets Ghost* (1914).
- Demosthenes** (385-322 B.C.), the famous Greek orator, statesman and warrior who, by his *Philippics*, roused the Athenians to resist the growing power of Philip of Macedon. Sixty-one of his orations were preserved, and are regarded as perhaps the finest examples of their kind.
- De Quincey, Thomas** (1785-1859), an eminent essayist and critic, the friend of Coleridge, Wordsworth, and Southey. His *Confessions of an Opium-eater* is a British classic.
- Derby, Edward Stanley, K.G., P.C., G.C.M.G.** 14th Earl of (1799-1869), was an eminent statesman who served as Prime Minister in the Governments of 1852, 1858, and 1866.
- Derby, Edward George Villiers Stanley, 17th Earl of, K.G., P.C., G.C.B., G.C.V.O., T.D.** (1865-1948), came into special prominence in 1915 as Director-General of Recruiting. Chairman of the Air Committee, 1916. Under-Sec. for War and War Sec., 1916-18 and again 1922-24. Ambassador in Paris, 1918-20.
- De Reszke, Jean** (1853-1925) and **De Reszke, Edouard** (1856-1917), Polish operatic singers, the first a tenor, the second a baritone, who achieved fame and immense fortunes by their singing.
- Derwentwater, 3rd Earl of** (1689-1716), the leader of the English Jacobite movement for placing the Pretender on the English throne. The rising took place in 1715, but was completely crushed by the Battle of Preston, and Derwentwater was beheaded.
- Desborough, Lord, K.G., G.C.V.O.** (1855-1944), Chairman of Thames Conservancy Board, 1905-37; Capt. of the Yeoman of the Guard, 1924-29; in his younger days was a noted athlete and swimmer; swam twice across Niagara.
- Descartes, René** (1596-1650), the famous French philosopher, mathematician, and author. Unconvinced by scholastic tradition and theological dogma, he sought to get back to primary truth, to the very definition of knowledge or the reason why anything can be said to be true. The basis of his Cartesian philosophy is summed up in his own words *cogito, ergo sum* (I am thinking so I exist).
- Desmoulins, Lucie Simplicie Camille Benoit** (1760-1794), was one of the fiercest of the French Revolutionary leaders, and from the destruction of the Bastille to the early days of the Terror was unflinching in his onslaughts upon the aristocrats and the priesthood. He fell under the displeasure of Robespierre, however, and was sent to the guillotine along with Danton.
- De Valera, Eamon, LL.D.** (b. New York, 1882), leader of the Fianna Fail party of the Rep. of Ireland; Prime Minister 1951-54; 1933-48 and Minister for External Affairs 1932-48. Pres. of Executive Council of Irish Free State, 1932-38; Chancellor of National University of Ireland since 1921; Pres. of Sinn Féin, 1917-26 when Fianna Fail was founded; Delegate to Assembly and Council of League of Nations, 1932, and President thereof 1932 and 1938.
- De Valois, Dame Ninette, D.B.E. (b. 1898)**, Irish-born ballet dancer and choreographer. Between world wars had many triumphs as a dancer with the British National Opera company and with the Diaghilev Russian ballet. Director of the Sadlers Wells School of Ballet since its foundation in 1931.
- Devonshire, 8th Duke of, K.G., P.C., G.C.V.O.** (1833-1908). Entered Parliament in 1857, as the Marquis of Hartington and speedily made a name as a Liberal politician, holding various offices. Separated from Mr. Gladstone on the Home Rule question, and in 1895 entered Lord Salisbury's third Ministry until Mr. Chamberlain's Declaration of Fiscal Policy in 1903, when he declared himself a Free Trader.
- Dewar, Professor Sir James, F.R.S.** (1842-1923), a prominent chemist, and a native of Kincardine. In 1877 was appointed Fullerton Professor of Chemistry at the Royal Institution, and in 1888, jointly with Sir Frederick Abel, invented cordite. He attracted great notice by his experiments with gases, and in 1891 succeeded in obtaining liquid oxygen. Introduced thermos flasks into science and industry.
- Dewey, Admiral George** (1837-1917), was a comparatively unknown American naval commander until his opportunity came in 1898 during the Spanish-American War, when he captured and destroyed a Spanish fleet in Manila Bay.
- Dewey, Prof. John** (1859-1952), the eminent American philosopher, psychologist and educationist, who, after holding professorships at the Universities of Minnesota, Michigan, and Chicago, where he was also Director of the School of Education until 1904, was Prof. of Philosophy at Columbia University, New York, 1904-32. A follower of William James (q.v.), he became well known in America as an adherent of pragmatism.
- De Witt, Jan** (1625-72), Dutch republican statesman, who carried on war with England and later negotiated the Triple Alliance, but was overthrown by the Orange Party and murdered.
- Diaghilev, Sergei Pavlovich** (1872-1929), Russian ballet impresario and founder of the Russian ballet, who selected the best dancers, musicians, and artists in his productions. Among those associated with him were Anna Pavlova, Vaslav Nijinsky, Tamara Karsavina, Leonide Massine, Michel Fokine, the choreographer, L. N. Bakst, the painter, and Igor Stravinsky, the composer.
- Dick, Sir William Reid, K.C.V.O., R.A., F.R.B.S.** (b. 1879), a notable sculptor; his statue of David Livingstone was unveiled in Africa in 1934, and in 1943 his statue of Franklin Roosevelt in Grosvenor Square was unveiled by Mrs. Roosevelt. The memorial statue of King George V. at Westminster is also his work. H.M.'s Sculptor-in-Ordinary for Scotland since Aug. 1938. Pres. of Royal Socy. of British Sculptors, 1933-38.
- Dickens, Charles (John Huffam)** (1812-1870), the most popular novelist of the 19th century, who from very humble beginnings worked himself up to the highest position in the world of letters. His literary output was enormous. From the time of the publication of the *Pickwick Papers* down to his death in 1870, covering a period of 33 years, he produced novel after novel, all possessing the original Dickensian characteristics, yet each wonderfully different from the rest and his popularity continues undiminished. He did so much for the cultivation of the true sentiment of Christmas that, whenever that season comes round, his name is recalled with honour and homage. As a public reader of his own works Dickens evinced a marvellous dramatic gift. He was buried in Westminster Abbey.
- Dickinson, Goldsworthy Lowes** (1863-1932), English scholar, author and philosopher. Well known as an interpreter and upholder of the Greek view of life, which is the subject of many of his books.
- Dicksee, Sir Francis Bernard, R.A.** (1853-1923), well known as the painter of numerous pictures, including "Harmony," "Romeo and Juliet," and "The Funeral of a Viking."
- Diderot, Denis** (1713-1784), the famous French philosopher and editor of the *Dictionnaire Encyclopedique*, which occupied him thirty years.
- Diemen, Anthony van** (1593-1645), Dutch Admiral who was Governor-General of the East Indian Colonies, 1636-45. He extended Dutch influence and trade throughout the Far East, promoted explorations to Australia, 1636-42, and on one of such explorations, Abel Tasman discovered New Zealand and named the island which we now know as Tasmania, Van Dieman's Land.

- Diesel, Rudolf** (1858-1913), German engineer, inventor of an internal-combustion engine which he patented in 1893. The modern so-called Diesel engine represents the improvements achieved by many men and has evolved mainly from the invention of Herbert Akroyd-Stuart, patented in 1890.
- Dimitrov, Georgi** (1882-1949), Bulgarian Communist politician and Prime Minister 1946-49. Engaged in Communist activities since 1909, and lived mainly in the U.S.S.R. In 1933 was charged by the Nazis with complicity in the Reichstag fire, but so brilliant was his defence that the Court was forced to acquit him.
- Diocletian** (A.D. 245-313), Roman Emperor from 284 to 305. Inaugurated the system of partnership Emperors, dividing the Empire into four sections, administered by himself in the East, Maximianus in Italy and Africa, Constantius in Britain, Gaul, etc., and Galerius in Illyricum. Abdicated in 305. Was a ruthless persecutor of the Christians.
- Diogenes** (412-322 B.C.), the celebrated Greek cynic philosopher who is said to have lived in a tub, wearing the coarsest clothing and living on the plainest food. Many of his sayings have been preserved.
- Dionysius**. Two of the tyrants of Syracuse bore this name. The first was a great soldier and statesman as well as a poet and philosopher, and lived from c. 430-367 B.C. The second Dionysius was his son and successor, but was of such a cruel disposition that he was driven from the throne and died in obscurity in 343.
- Disney, Walter Elias** ("Walt") (b. 1901). American cartoonist; creator of Mickey Mouse, Silly Symphonies, Donald Duck Cartoons, and Pinocchio shown on the screen.
- Disraeli, Benjamin**. (See Beaconsfield.)
- D'Israeli, Isaac** (1766-1848), the father of Benjamin Disraeli. Was an interesting worker in a special literary field, and produced some exceedingly interesting volumes dealing with authors and their writings. His best-known work is his *Curiosities of Literature*.
- Dixon, Harold Bailey** (1852-1930), Professor of Chemistry at Manchester University, 1887-1922, whose work on gaseous explosions opened a new era in combustion research.
- Dobson, Frank**, C.B.E., A.R.A., A.R.B.S. (b. 1888), a leading English sculptor. President of the London Group, 1923-27.
- Dobson, Henry Austin**, LL.D. (1840-1921), was in the Civil Service from 1860 to 1901, and was the author of several volumes of Society verse and prose works, dealing chiefly with the 18th century.
- Dodd, Francis**, R.A., R.W.S. (1874-1949), painter, engraver and draughtsman. He was one of the official artists during the War of 1914-18, and executed a valuable series of portraits of British Admirals and Generals on active service. Appointed one of the official artists for the second world war, 1939-45.
- Dodgson, Charles Lutwidge** (1832-1898), a writer and Mathematical Lecturer at Christ Church, Oxford, who, under the pseudonym of Lewis Carroll, achieved lasting fame by his *Alice's Adventures in Wonderland*, one of the most delightful books for children ever written.
- Dolci, Carlo** (1616-1686), the famous Florentine painter, examples of whose Madonnas and Saints are to be found in most National collections.
- Dominic, St.** (1170-1221), founder of the Order of Dominicans, or Black Friars, who devoted much energy to the conversion of the Albigenses, but meeting with small success, instituted a policy of persecution after the manner of the later Inquisition.
- Domitian** (Titus Flavius Domitianus Augustus) (52-96), a Roman emperor who, after many cruel and tyrannical acts, aroused the enmity of the people and was finally assassinated.
- Donatello** (Donato di Niccolò di Berto Bardi) (1386-1466), the famous Italian sculptor, whose works are to be seen chiefly at Florence, though several examples are at South Kensington.
- Donizetti, Gaetano** (1798-1848), the Italian composer to whom we owe the operas of *Lucia di Lammermoor*, *La Fille du Régiment*, *La Favorita*, *Don Pasquale*, and others.
- Donne, John** (1573-1631), an English poet and divine. As a preacher he was celebrated in his lifetime but few of his poems were printed and
- it was not until the 20th century that he was universally recognised as one of the most original of English poets. His writings include *Songs and Sonnets*, *Satires*, *Elegies*, *Problems and Paradoxes*, and the *Holy Sonnets*. He took orders in 1615 and was made dean of St. Paul's in 1621. Sir Edmund Gosse's *Life and Letters* appeared in 1899 and Sir Herbert Grierson's monumental edition of Donne's poetry in 1912.
- Donoghue, Stephen** ("Steve") (1884-1945), in his day a famous jockey. Rode the Derby Race winner six times, and established a new record by winning this classic event in three successive years, 1921-22-23.
- Doolittle, Lt.-Gen. James H.** (b. 1896), American airman. Made first non-stop flight across American continent, 1922. Won Schneider Cup race, 1925. Led first bomber attack on Tokio, 1942. Commanded U.S. Air Forces in North Africa, 1942, and Britain, 1944-45.
- Doré, Gustave** (1833-1883), the well-known French artist, famous for his colossal scriptural paintings and his powerful illustrations to the works of Dante, Milton, and Tennyson.
- Dostoevsky, Feodor Mikhailovitch** (1821-1881), one of Russia's greatest novelists. Author of *Crime and Punishment*, *Brothers Karamazov*, *The Idiot*, *The Possessed*, etc. Dostoevsky's novels are quite exceptional for their deep psychological insight, vision and marvellous tragic and analytic power, and have had a profound influence on modern European writers.
- Doughty, Charles Montagu**, M.A. (1843-1926), English writer and explorer. His most important travels were in Arabia. He is the author of the unique classic *Arabia Deserta*, written in a striking prose style, based on that of the Elizabethan period.
- Douglas, Marshal of the R.A.F. Lord, G.C.B., M.C., D.F.C.** (b. 1893), commanded Fighter Command, 1940-42, R.A.F. Middle East, 1943-44, and Coastal Command, 1944-45. C-in-C. and Military Governor of British Zone of Germany, 1946-47. A Labour peer.
- Douglas, Norman** (1868-1952), novelist and writer of witty and elegant prose. A Scot, born in Austria, he made his home on the Mediterranean and was buried on Capri. Travel books include *Siren Land* (1910), *Fountains in the Sand* (1912), *Old Calabria* (1915), *Alone* (1921), *Together* (1923); his highly entertaining novel *South Wind* was published in 1917.
- Doulton, Sir Henry** (1820-1897), famous potter and the inventor of Doulton ware.
- Dowden, Edward**, M.A., LL.D., D.O.L., Litt.D. (1843-1913). Well known for his critical and other writings, mainly dealing with the lives and works of the poets. Was Professor of Literature at Trinity College, Dublin, for 37 years.
- Dowding, Air Chief Marshal Lord, G.C.B., G.C.V.O., C.M.G.** (b. 1882), Chief of Fighter Command in Battle of Britain, 1940.
- Doyle, Sir Arthur Conan**, M.D. (1859-1930), masterly writer of detective stories and of historical romances such as the *White Company* and *Rodney Stone*. Creator of Sherlock Holmes, the archetype of detectives, who shared a flat in Baker Street with his friend and chronicler, Dr. Watson, and conducted a long series of investigations. The immensely popular stories mostly appeared in the *Strand Magazine* and include such terrifying adventures as the *Hound of the Baskervilles* and the *Speckled Band*. In later life Doyle was notable as a spiritualist.
- Doyle, Richard** (1824-1883), an artist of much humour and fancy, who was exceedingly popular while on the staff of *Punch* from 1841 to 1850. The familiar cover of *Punch* is his work.
- D'Oyly Carte, Richard** (1844-1901), English theatrical manager, associated with the production of the Gilbert and Sullivan comic operas. The D'Oyly Carte Opera Companies played Gilbert and Sullivan all over the world.
- Drake, Sir Francis** (c. 1540-1596), the great admiral of Queen Elizabeth's time, who made many adventurous voyages, bent partly on discovery and partly on plunder. He was a leading figure—under Lord Howard—in the attack on and destruction of the Spanish Armada in 1588.
- Draper, John William** (1811-82), American chemist, born in Liverpool, he emigrated to

- America in 1831, and in 1841 was one of the founders of the Medical School of New York University. As a chemist he acquired a great reputation, and was the first to take a successful photograph of the human face, 1839, and also to take a photograph of the moon.
- Dreiser, Theodore** (1871-1945), an American author whose novels of American life are written in vigorous native prose.
- Dreyfus, Lt.-Col. Alfred** (1859-1935), a French officer, condemned by a military secret tribunal on a charge of divulging secrets in 1894 to a foreign power, and condemned to imprisonment for life on Devil's Island in French Guiana. At a sensational new trial in 1899 he was again found guilty, and sentenced to a mitigated term of incarceration for ten years; but strenuous efforts on his behalf secured a pardon later. In 1906 he was entirely exonerated and reinstated in the army, with the rank of Major, and made a Chevalier of the Legion of Honour.
- Drinkwater, John** (1882-1937), was a well-known dramatist and poet. His plays *Abraham Lincoln* and *Oliver Cromwell* have had great praise and success.
- Driver, Samuel Rolles** (1846-1914) a distinguished Hebrew and Old Testament Scholar who was Regius Prof. of Hebrew at Oxford, 1883-1914. He was one of the greatest Hebrew scholars of his day, and was one of the higher critics of the Old Testament.
- Drummond, William** (1855-1849), a Scottish poet—laid of Hawthornden—whose works dealt largely with political matters, but revealed considerable poetic power. Ben Jonson walked from London to Scotland to pay him his respects.
- Drury, (Edward) Alfred (Briscoe), R.A.** (1857-1944). English sculptor who was responsible for many public monuments, including the colossal statues of Queen Victoria at Bradford and Portsmouth (1903), the decorations for the exterior of the War Office (1905) and of the Victoria and Albert Museum (1909).
- Dryden, John** (1631-1700), one of the most vigorous and prolific of English poets and writers, and a popular dramatist. He excelled in satire, and drew some powerful pictures of the statesmen of his day. His translation of Virgil ranks with Pope's translation of the *Iliad*. He was buried in Westminster Abbey. Originally a Parliamentarian he went over to the Royalists and was laureate and historiographer-royal, 1670-88.
- Du Barry, Marie Jeanne Bécu, Comtesse** (1746-1793), the favourite of Louis XV., who exercised great influence over the King, but after his death, and the breaking out of the Revolution, took refuge in England for a time. Being tempted to return to Paris in 1793, she was arrested and guillotined.
- Du Chailu, Paul Belloni** (1835-1903), a noted African traveller who was chief of General Gordon's staff in 1874, and wrote many valuable books of travels, his studies of the gorilla being especially interesting.
- Dufferin and Ava, 1st Marquess of, P.C., K.P., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., F.R.S.** (1826-1902), was a diplomatist of great experience, a writer of brilliance, and filled many high offices with distinction and success, including those of Governor-General of Canada and Viceroy of India.
- Duke-Elder, Sir William Stewart, K.C.V.O., M.A., D.Sc., M.D.** (b. 1898), Scottish ophthalmic surgeon at several London Hospitals and Surgeon-Oculist to H.M. Queen Elizabeth.
- Dulles, John Foster** (b. 1889), U.S. Secretary of State in the Republican Administration, 1953.
- Dumas, Alexandre** (1802-1870), the famous French novelist and dramatist, who published more volumes than any man of his time, the greater part of them of high merit. In the field of historical romance he showed wonderful power and resource, and his thrilling story *Monte Cristo* is one of the great novels of the nineteenth century. He also wrote *The Three Musketeers*.
- Dumas, Alexandre, Fils** (1824-1895), son of the last-named, and attained almost equal fame with his father, both as novelist and dramatist. *La Dame aux Camélias* is his most famous novel.
- Du Maurier, Daphne** (b. 1907), author of many best-sellers, including *Rebecca*, *Jamaica Inn*, etc., grand-daughter of George Du Maurier, daughter of Sir Gerald Du Maurier, the actor, and wife of Lt.-Gen. Sir Frederick Browning.
- Du Maurier, George Louis Palmella Busson** (1834-1896), one of the best known of the *Punch* artists during a long period and author of the novels of *Peter Ibbelton*, *Trilby*, and *The Martian*.
- Dundee, John Graham of Claverhouse, 1st Viscount** (1648-89), known as "Bonnie Dundee," royalist leader employed in the suppression of the Covenanters, taking part in the defeat at Drumclog and the victory of Bothwell Brig under the Duke of Monmouth in 1679. Defeated Mackay in the pass of Killiecrankie but was killed in the moment of victory.
- Duns Scotus, Johannes** (1266-1308), a famous scholastic who was born at Maxton, in the county of Roxburgh; joined the Franciscan Order at Dumfries in 1281, and ordained priest at Lincoln in 1291. Student and teacher at Oxford and Paris and died at Cologne. He was the great doctrinal opponent of Thomas Aquinas and has been surnamed *doctor subtilis*.
- Dunsany, 18th Baron** (b. 1878), Irish dramatist and author. He has written a number of colourful, whimsical and deeply imaginative novels, as well as short stories, and many plays, by which he has become well-known.
- Dunstan, St. (c. 924-c. 988)**, the famous Abbot of Glastonbury and Archbishop of Canterbury, who lived through the reign of five kings, and exercised great political influence.
- Dupleix, Joseph François** (1697-1763), was governor of the French East Indian possessions at the time when Clive was guiding the fortunes of the East India Company, and after Clive's victory at Plassey Dupleix's day was over. He returned to France, and fell into disgrace and poverty.
- Dürer, Albrecht** (1471-1528), the great German painter and engraver, and friend of Luther. Many of his engravings are in the British Museum. Of Nuremberg birth, he may be regarded as the founder of the German school and the inventor of etching.
- Durham, John George Lambton, Earl of** (1792-1840), served as Governor-General of Canada after the disturbances of 1837, and in 1839 presented the famous *Durham Report* to Parliament. This laid down the principle of colonial self-government and marks a turning-point in the affairs of the Empire.
- Duse, Elenora** (1861-1924), an Italian tragedienne of world-wide reputation.
- Duval, Claude** (1643-1670), a notorious highwayman who, coming to England from Normandy in the Duchess of Richmond's service, took to "the road," and for a few years successfully evaded capture. He was hanged at Tyburn.
- Duveen, 1st and only Baron, of Millbank** (1869-1939), was head of a firm of noted art dealers, and a generous benefactor of British Art.
- Dvořák, Antonín** (1841-1904), the eminent Czech composer. Combined with a striking originality, his compositions show fine musical qualities. Made himself popular in this country by his *Stabat Mater* in 1883.
- Dyson, Sir Frank (Watson), K.B.E., F.R.S.** (1868-1939), Astronomer Royal (1910-33). Was previously (1905-10) Astronomer Royal for Scotland. Was the author of a number of works on astronomy, and widely celebrated for his interesting public lectures.
- Dyson, Sir George, K.C.V.O., M.A., Mus.D., LL.D., F.R.C.M.** (b. 1883), Director of the Royal College of Music 1938-53. Author of *The New Music*, in which he analyses the technique of modern schools of composition. Composed a symphony, a violin concerto, and several choral works, such as *The Canterbury Pilgrims* and *Nebuchadnezzar*.

## E

- Eastlake, Sir Charles Lock, P.R.A.** (1793-1865), an eminent English painter whose works were mostly of a religious character. Pres. of R.A. 1850.
- Eastman, George** (1854-1932), American inventor who invented the roll photographic film and the famous Kodak camera. He amassed a vast fortune and his philanthropies were estimated at over £60 million. After a long illness he committed suicide.
- Ebert, Friedrich** (1871-1925), Leader of the

- German Social Democratic Party from 1916; Chancellor of Germany from Nov. 9, 1918, and the first President of the German Republic from 1919 until his death.
- Eck, Johann von** (1486-1543), one of the most vigorous opponents of the Reformation in Germany.
- Eddington, Prof. Sir Arthur Stanley, O.M., F.R.S.** (1882-1944), Plumian Professor of Astronomy, Cambridge, 1913; Director of the Cambridge Observatory, 1914-44. Author of *The Nature of the Physical World* (1928) and many scientific works.
- Eddy, Mrs. Mary Baker** (1821-1910), founder of the religion (theology and practice) which she named Christian Science, and of the Church of Christ, Scientist. Author of the Christian Science textbook, *Science and Health with Key to the Scriptures*, published in 1875.
- Ede, Rt. Hon. James Chuter, C.H., M.P.** (b. 1882), Home Secretary in two Labour Governments, 1945-51. Parliamentary Secretary to the Ministry of Education, 1940-45.
- Eden, Rt. Hon. Sir (Robert) Anthony, K.G., M.C., M.P.** (b. 1897), Prime Minister since 1955. Dep. Prime Min. and For. Sec. in the Churchill Administration, 1951-55. Entered Parliament in 1923 for Warwick and Leamington and has held various offices dealing with foreign affairs before becoming Foreign Sec. in 1935 on the resignation of Sir Samuel Hoare. He resigned in 1938 on a difference of policy with Mr. Neville Chamberlain about relations with Italy, but rejoined the Government on the outbreak of war. Became successively Sec. for the Dominions, Sec. for War and Foreign Sec., 1940-45.
- Edgar** (944-975), King of England from 959 to 975, was a monarch of enlightened ideas, who under the influence of Dunstan was able to carry out many useful reforms.
- Edgar Atheling** (c. 1060-c. 1130), as grandson of Edmund Ironside, was the lawful heir of Edward the Confessor, but in the confusion of the Norman invasion he was unable to maintain his claim.
- Edgeworth, Maria** (1767-1849), Irish novelist, whose stories included *Castle Rackrent*, *The Absentee*, and *Belinda*.
- Edinburgh, H.R.H. Philip, Duke of, K.G., P.C., K.T., G.B.E.** (b. 1921), consort of H.M. Queen Elizabeth II. Relinquished his title of Prince Philip of Greece and Denmark on his naturalisation in 1947, taking the name of Mountbatten. He is the great grandson of Queen Victoria, grandson of Admiral Prince Louis of Battenburg, and nephew of Earl Mountbatten of Burma. Educated in England and Germany and at the Royal Naval College. Served in the Royal Navy throughout the war. Pres. of the National Playing Fields Association; Pres. of the British Association, 1951-52. Chancellor of Edinburgh University, 1953.
- Edison, Thomas Alva** (1847-1931), an American inventor, who after an adventurous boyhood became a telegraph operator and interested in electrical problems. Established himself in New York in 1869, and invented an improved printing telegraph. In 1867 set up an elaborate laboratory and factory at Menlo Park, New Jersey, from which place he sent out many clever and some startling inventions, including a system of duplex telegraphy, afterwards improved into quadruplex and sextuplex transmission, the phonograph, and a method of preparing carbon filaments for the electric lamp; patented over 1300 inventions.
- Edmund II. (Ironside)** (980-1016), the son of Ethelred, after years of contention with the Danes, made a compact with Canute to divide England between them, but dying shortly afterwards the kingdom was settled on Canute.
- Edward the Confessor** (c. 1004-1066), the Anglo-Saxon king who immediately preceded—save for the brief reign of Harold of less than a year—the Norman Conquest, and founded Westminster Abbey, where a smaller church, then dilapidated, had previously for a period had a precarious existence. He was a religious-minded mystic, and was canonised in 1161, and given the shrine in the Abbey of his origination, which yet remains fairly intact, despite the ravages of time and disturbing hands.
- Edward the Elder** was the son of Alfred, and succeeded him as King of the West Saxons in 901.
- He was successful in overcoming the Danes, and became overlord of the Northern counties.
- Edward the Martyr** (963-979) became king in succession to Edgar, but, although supported by Dunstan, was not able to prevail against his stepmother Elfrida, who had him murdered.
- Edward I.** (1239-1307) was king of England from 1272 to 1307. Took part in the Crusades, completed the conquest of Wales, overcame Scottish opposition—executing Wallace and receiving the submission of Bruce, and promulgated many wise laws. He was nicknamed "Longshanks."
- Edward II.** (1284-1327), the son of Edward I., succeeded his father when the latter died at Burghover-Sands in 1307. Suffered defeat at the hands of the Scotch at Bannockburn, and on account of his arbitrary disposition, cruelty and lavish concessions to favourites, was deposed in 1327, and afterwards murdered at Berkeley Castle.
- Edward III.** (1312-1377) was one of the ablest of English monarchs who, although much taken up with long and bitter wars with France and Scotland, did much for the commercial interests of the nation, and was the means of introducing large numbers of Flemings into the country, who laid the foundation of the English textile manufactures. He married Philippa of Hainault, and was the father of Edward the Black Prince.
- Edward IV.** (1442-1483) attempted unsuccessfully to regain the lost English possessions in France, and resorted to many despotic expedients for obtaining supplies but it stands to his credit that he entered into trading treaties with the commercial merchants of the Continent which were of benefit to his people.
- Edward V.** (1470-1483)—son of Edward IV. and Elizabeth Woodville—was the unfortunate king who was put to death in the Tower of London, and succeeded by Richard III., his unscrupulous uncle, who had made himself "Protector" and assumed the Crown a little more than two months after the death of Edward IV., publishing the demise of the young King and his brother the Duke of York as having occurred in prison. The bones of the murdered boys were many years afterwards taken to Westminster Abbey for final burial.
- Edward VI.** (1537-1553), succeeded his father, Henry VIII., when in his tenth year and died in his sixteenth year. The Reformation under the Regency of Somerset first, and then of Northumberland, made considerable progress during his brief reign. He was induced during his last illness to name Lady Jane Grey his successor, with results disastrous to that unfortunate personage and many others concerned.
- Edward VII.** (1841-1910). Was married to Princess Alexandra of Denmark in 1863. Visited India in 1875, and from that time onward was constantly in the public eye, taking part in all kinds of functions. Succeeded to the throne on the death of Queen Victoria, Jan. 22, 1901. The Coronation, which had been planned for June 26, 1902, had to be postponed in consequence of the King's sudden illness, but eventually took place on August 9 in the same year. His Majesty was a powerful factor in the preservation of the peace of Europe, his friendly intercourse with the heads of the French, German, and other nations earning for him the title of "Edward the Peacemaker."
- Edward VIII.** (b. 1894), succeeded to the throne on the death of his father, George V., Jan., 20, 1936; Prince of Wales 1911-36. Abdicated in favour of his brother H.R.H. the Duke of York Dec. 10, 1936, and was created Duke of Windsor. Governor of the Bahamas 1940-45.
- Edwin**, (855-633), King of Northumbria, killed in battle at Hatfield Chase, Yorkshire, in 633. He was baptised into the Christian faith at York in 627, and built a church there. He was canonised later.
- Egbert** was a descendant of Cerdic, king of the West Saxons, and reigned from 802 to 839 in Wessex; in his later years became the first king of all England. In 835 he had to drive the Northmen away from Cornwall.
- Ehrlich, Paul** (1854-1914), a noted German scientist who was Director of the Royal Institute for Experimental Therapeutics at Frankfurt-on-Maine, which he made famous by his

experimental laboratory work in connection with cancer. His prolonged experimental researches brought him world-wide renown, his greatest triumphs being the discovery of salvarsan and neo-salvarsan. He was one of the founders of serum therapy, and did important work on diphtheria and anti-toxin.

**Eiffel, Alexandre Gustave** (1832-1923), French engineer, one of the first to employ compressed-air caissons in bridge building. Among his notable works are the great Eiffel Tower, Paris (1887-89) and the Panama Canal Locks.

**Einstein, Albert** (1879-1955), one of the greatest men of science of all time, whose chief claim to fame rests upon his theories of relativity. He was born in Ulm of Jewish parents and lived for many years in Switzerland. Awarded the Nobel Prize in 1922 for his work in quantum theory. In 1933 he was driven by the Nazis to seek asylum in America and became a professor at the Institute for Advanced Study at Princeton, 1933-45. His works include *Relativity* (1920), *Zur Einheitlichen Feldtheorie* (1929), *About Zionism* (1930), *The Evolution of Physics* (1938), *The Meaning of Relativity* (1950), *Out of My Later Years* (1950).

**Eisenhower, Dwight David, G.C.B., O.M.** (b. 1890). Pres. of the United States, 1953. Supreme Commander Atlantic Forces in Europe 1950-52. U.S. Chief of Staff, 1945-48. C-in-C. Allied Forces in European theatre of operations, 1943-45, and of Allied Forces in N. Africa, 1942-43. Pres. of Columbia Univ. 1948-50. Retired from the army in June 1952.

**Eisenstein, Sergei Mikhailovich** (1898-1948), Russian film director, whose silent film classic *The Battleship Potemkin* brought him world-wide fame. He also produced *Alexander Nevsky* and *Ivan the Terrible*.

**Eleanor, Queen of Edward I.** (d. 1290), was a woman of great piety and devotion. After her death the king had memorial crosses erected at the twelve places where her body rested on its way from Grantham to Westminster.

**Elgar, Sir Edward, Bart., O.M., G.C.V.O.** (1857-1934), English composer and Master of the King's Music, 1924-34. Starting as a violinist and a teacher, he composed many choral-orchestral works for various festivals and sprang to fame with the *Enigma Variations*, musical portraits of his friends. Other compositions include two symphonies, the oratorios *The Kingdom*, *The Apostles* and *The Dream of Gerontius*, and the tone-poem of *Falstaff*.

**Elgin, Thomas Bruce, 7th Earl of, P.C.** (1766-1841), a British diplomatist who brought to England from Athens the famous "Elgin marbles," now in the British Museum.

**Eliot, George** (1819-1880), the pen name of Marian Evans, who produced some of the most memorable novels of the 19th century, including *Adam Bede*, *The Mill on the Floss*, *Silas Marner*, *Middlemarch* and *Daniel Deronda*.

**Eliot, Thomas Stearns, O.M.** (b. 1888), one of the foremost lyric poets of the 20th century. Born in U.S.A. he became a naturalised British citizen in 1927. The poet of disillusionment, as he has been called, he made his name with his poem *The Waste Land* (1922), which was followed by *Poems* (1909-33), and by *Ash Wednesday* (1930). Author of *Murder in the Cathedral*, portraying the murder of Thomas à Becket, *The Cocktail Party*, and *The Confidential Clerk*. Awarded Nobel Prize for Literature 1948.

**Elizabeth (b. 1900)**, Queen Consort of George VI., daughter of the 14th Earl of Strathmore. Before her marriage in 1923 she was Lady Elizabeth Angela Marguerite Bowes-Lyon.

**Elizabeth I.** (1533-1603) came to the throne in 1558 at the age of twenty-five, and reigned forty-five years. Was a fervid Protestant, a sincere lover of her country, a masterful and enlightened ruler—fickle as far as her favourites were concerned—and added distinction to a distinguished period. The defeat of the Spanish Armada, the execution of Mary Stuart, the naval supremacy of England, the extension of her colonies, and the glory of a great new literature of which Shakespeare was the brightest ornament are features associated with her reign.

**Elizabeth II.** (Elizabeth Alexandra Mary of Windsor) (b. 1926), ascended the throne in February 1952 at the age of twenty-five on the

death of her father George VI. Her Consort, The Duke of Edinburgh (b. 1921), is the son of Prince Andrew of Greece and a descendant of the Danish royal family. They have two children, Prince Charles (b. 1948), the Heir-Apparent, and Princess Anne (b. 1950).

**Ellis, (Henry) Havelock** (1859-1939), literary and scientific writer and an authority on sex.

**Elwes, Gervase Henry** (1866-1921), a famous English tenor who excelled in his interpretation of the works of Vaughan Williams and Elgar.

**Emerson, Ralph Waldo** (1803-1882), the American essayist and philosopher. His *Conduct of Life*, *Representative Men*, and *Essays*, are among the most brilliant literary productions of America.

**Emin Pasha**, the name adopted by Eduard Schnitzer (1840-92), a German explorer associated with Gen. Charles Gordon in the pacification of the Sudan. He joined Gordon's forces as a medical officer and showing marked administrative ability was made governor of the Equatorial Province in 1878. He was menaced by the Mahdi and rescued by Stanley in 1889. While engaged in exploration for Germany in the region of Lake Tanganyika he was murdered by Arabs.

**Emmet, Robert** (1778-1803), the enthusiastic youth who led the rebellion in Ireland in 1803 and was tried and executed in the same year for high treason. He is one of Ireland's patriot heroes.

**Engels, Friedrich** (1820-1895), Socialist writer and lifelong friend of Karl Marx with whom he collaborated in producing the Communist Manifesto of 1848.

**Epictetus of Hierapolis**, the Stoic philosopher, who lived in the 1st century, and was a moral teacher of great repute and influence.

**Epicurus** (342-270 B.C.), the founder of the Epicurean philosophy, which taught that virtue should be followed because it leads to happiness.

**Epstein, Sir Jacob, K.B.E.** (b. 1880), sculptor, born in New York of Russian-Polish parents. His work includes *Rima*, the Hudson memorial in Hyde Park; *Day and Night* on the building of the Underground Headquarters at St. James' Park; *Genesis*, exhibited in 1931; *Lazarus*, which has a fine setting in New College, Oxford; and the *Madonna and Child* group for the restored 18th cent. buildings in Cavendish Square.

**Erasmus Desiderius** (1466-1536), the great Dutch philosopher and scholar, of whom it was said that he "laid the egg which Luther hatched."

**Ericsson, John** (1803-1889), a distinguished Swedish engineer who entered into competition with George Stephenson in the first famous trial of locomotives. Later he settled in the United States and devoted himself with much success to marine engineering.

**Ervine, St. John Greer** (b. 1883), author, dramatist and critic, noted as an able controversialist on all subjects pertaining to the theatre.

**Essex, Robert Devereux, 2nd Earl of** (1567-1601), became Queen Elizabeth's favourite after the death of Leicester, but, offending the Queen by certain acts in Ireland, was committed to prison. Later on, being liberated, he was implicated in a rebellious movement, for which he suffered death on Tower Hill.

**Ethelbert, King of Kent** at the close of the 6th century and commencement of the 7th. Famous for having accepted Christianity on the entreaty of St. Augustine. Published the first code of written laws in English. Canonised later.

**Ethelred II., King of England** from 979 to 1016; received the surname of "the Unready," because of his slowness to take action against the Danes, with whom he was more or less in conflict during the whole period of his reign.

**Ethelwulf** was the Anglo-Saxon sovereign who succeeded his father Egbert in 837. Died in 857, and was buried at Winchester.

**Etty, William** (1787-1849), a famous English R.A., who contributed to the Royal Academy some of its most admired pictures between 1820 and 1849.

**Eucken, Rudolf Christoph** (1846-1926), a famous German philosopher and theologian.

**Euclid**, the famous Greek mathematician, who lived in the 3rd century B.C., and whose *Elements of Geometry* remained a standard textbook until the present century.

**Eugenie, ex-Empress of the French** (1826-1920), was the daughter of Count Montijo of Granada, and on the mother's side of Scottish descent.

She married Napoleon III. in 1853. and for many years kept a brilliant court. After Sedan the Empress escaped to England, where she was subsequently joined by Louis Napoleon. They resided at Chislehurst for a time, and there her husband died.

**Euler, Leonard** (1707-1783), Swiss mathematician, regarded as the founder of pure mathematics. He was a prolific writer on mathematics.

**Euripides** (480-406 B.C.) was the greatest of Greek tragic poets. He wrote seventy-five plays, eighteen of which have been preserved, the most famous being *Alceste*, *Medea*, *Iphigenia*, and *Orestes*.

**Eusebius** (264-340), an ecclesiastical historian of rare industry, whose works are still held in great esteem. His *Chronicon* is a history of the world down to his own time, while his *Ecclesiastical History* traces the chief events of the Christian Church.

**Evans, Sir Arthur, D.Litt., LL.D., M.A., Ph.D., F.R.S.** (1851-1941), was a distinguished excavator and archaeologist. Pres. of British Assn. 1916-19.

**Evans, Dame Edith Mary, D.B.E.** (b. 1888), the versatile and brilliant English actress who early displayed a complete mastery of dramatic technique and a delicious sense of artificial comedy which found full expression in the part of Mistress Millamant in *The Way of the World*. She appeared in *The Dark is Light Enough* in 1954.

**Evatt, Rt. Hon. Herbert Vere, M.A., LL.D.**, (b. 1894), Australian lawyer and politician who was Minister for External Affairs 1941-49. Served as a member of the British War Cabinet in 1942, was a delegate to the San Francisco conference, and has been active in the United Nations Organisation. Leader of the Labour Party in succession to the late Mr. Chifley.

**Evelyn, John** (1620-1706), was one of the founders of the Royal Society and wrote several scientific works, but is best remembered for his *Diary* which covers the period 1640-1706.

**Ewing, Sir (James) Alfred, K.C.B., F.R.S.** (1855-1936), Principal and Vice-Chancellor of Edinburgh University 1916-29; Pres. of British Association 1932; Pres. of The Royal Society of Edinburgh 1924-29.

**Eyck, Hubert van** (c. 1366-1428), and **Eyck, Jan van** (c. 1386-1440), two of the greatest masters of the early Flemish School of Painters.

## F

**Fabius Maximus (Cunctator)** (d. 203 B.C.), the Roman Consul and Dictator, saved Rome from conquest by Hannibal by deliberate and well-planned strategic evasion of battle. The term "Fabian Policy" is derived from Fabian's tactics.

**Fabre, Jean Henri Casimir** (1823-1915), French naturalist whose lifelong interest was the study of the habits of insects and whose observations were delightfully recorded in his *Souvenirs entomologiques*, a work of many volumes.

**Faet, Thomas, R.A.** (1826-1900), one of the most successful of Victorian painters, won a great reputation for his Scottish subjects.

**Fahrenheit, Gabriel Daniel** (1686-1736), German physicist, born in Danzig, improved construction of thermometers, notably in using quicksilver for alcohol. Devised the scale with freezing-point at 32° boiling-point at 212°.

**Fairbairn, Sir William, 1st Bt., F.R.S.** (1789-1874), mechanical engineer and inventor. By the first utilisation of iron in shipbuilding, became eminent and wealthy.

**Fairfax, Thomas, 3rd Lord** (1612-1671) a prominent leader of the Parliamentary army during the Civil War, who greatly distinguished himself at Marston Moor and Naseby.

**Faraday, Michael, F.R.S.** (1791-1867), great experimental physicist, founder of the science of electro-magnetism. He was the son of a blacksmith and at the age of 12 worked for a book-binder, to whom he was later apprenticed. Became laboratory assistant to Sir Humphry Davy at the Royal Institution in 1813, and in 1827 succeeded him, becoming professor of chemistry in 1833. He was one of the world's most brilliant experimenters and set himself the problem of finding the connections between the forces of light, heat, electricity, and magnetism.

The epoch-making discoveries he made form the basis of the modern electrical industry. He lectured superbly well and inaugurated the Christmas lectures for juvenile audiences at the Royal Institution.

**Farman, Henri** (b. 1874), French aviator, one of the pioneers of aviation and a famous designer and builder of aeroplanes.

**Farouk I** (b. 1920), King of Egypt, 1936-52. Forced to abdicate as a result of a military coup d'état in July 1952.

**Farrar, Very Rev. Frederic William, D.D., F.R.S.** (1831-1903), Dean of Canterbury 1895-1903, a divine and author, some of whose writing attained a large circulation and exercised a considerable influence. His most popular publications were *The Life of Christ*, *The Life and Works of St. Paul*, and *Early Days of Christianity*. Author of the schoolboy story *Eric*.

**Fawcett, Rt. Hon. Henry** (1833-84), was totally blinded in a shooting accident in 1858, but rose to Professor of Political Economy at Cambridge after the publication of his *Manual of Political Economy* in 1863. In 1865 he entered Parliament as a Liberal and in 1880 became Postmaster-General. Introduced the parcel-post, postal orders, and the 6d. telegram.

**Fawcett, Dame Millicent Garrett, G.B.E.** (1847-1929), widow of the above; educational reformer and leader of the movement for women's suffrage; a very able writer on political economy and one of the founders of Newnham College, Cambridge.

**Fawkes, Guy** (1570-1606), a Yorkshire Catholic, who with Catesby and other conspirators planned the Gunpowder Plot. Although warned of the discovery of the plot, Fawkes persisted and was captured in the cellar of the Parliament House and hanged. (See Gunpowder Plot, General Information section.)

**Fenelon, François de Salignac de la Mothe** (1651-1715), Archbishop of Cambrai and a writer of distinction. His *Telemachus* is a French classic. **Ferdinand V. of Aragon** (1452-1516), who married Isabella of Castile, and with her reigned over Spain during a period of great events. He saw the Moors expelled from Spain, equipped Columbus for the discoveries which led to Spain's vast colonial possessions, and instituted the Inquisition.

**Ferguson, James, F.R.S.** (1710-1776), a Banffshire man of great ability and inventiveness, who, from being a shepherd-boy, educated himself in astronomy, mathematics, and portrait painting, so that he was able to support his parents, and became eminent as a scientific lecturer. He was made a Fellow of the Royal Society.

**Fermi, Enrico** (1901-54), Italian nuclear physicist whose research contributed to the harnessing of atomic energy and the development of the atomic bomb. Prof. of Physics at Rome, Columbia Univ., New York, and Univ. of Chicago. He postulated the existence of the neutrino (See Gen. Inf.) and discovered the element Neptunium (Atomic No. 93). Awarded the 1938 Nobel Prize in Physics.

**Feuchtwanger, Dr. Lion** (b. 1884), noted German-Jewish author; has written plays, poems and novels, being especially famous for his historical novels, such as *Jew Süss* and other well-known writings in which he gives a complete history of the period in which his characters live. *'Tis Polly to be Wise*, an historical essay about Jean-Jacques Rousseau, was published in 1954.

**Fichte, Johann Gottlieb** (1762-1814); was Professor of Philosophy, first at Jena and then at Erlangen, and later Rector of the University of Berlin. His works had great influence upon the thought of his time and prepared the way for the later Hegelian dialectic.

**Fielding, Henry** (1707-1754), a celebrated English novelist, author of *Tom Jones*, *Joseph Andrews*, and *Amelia*, as well as many plays.

**Fields, Gracie, C.B.E.** (b. 1898), an inimitable Lancashire comedienne, and a great popular favourite with the British public. Made her first London appearance in 1915. Equally successful as a film as well as a stage actress, she gained the affections of her music hall audiences through her abundant vitality, her Lancashire humour and her remarkably flexible voice.

**Fildes, Sir Luke, K.C.V.O., R.A.** (1844-1927), first attracted notice as a black-and-white artist,

- and illustrated Dickens' *Edwin Drood*. Exhibited at the Royal Academy in 1872, and at successive exhibitions was represented by many important works.
- Finck, Herman** (1872-1939), British conductor and composer. Was Musical Director of the Palace Theatre, 1900-21, and of Drury Lane, 1922-31. As the composer of more than fifty light operas and revues as well as hundreds of songs he achieved great popularity.
- Finsen, Prof. Niels Ryberg** (1860-1904), a Danish medical scientist whose light cure for lupus obtained the approval of Queen Alexandra and the aid of many philanthropists. He established an institute for his system at Copenhagen. Inventor of the Finsen ultra-violet lamp. Awarded Nobel Prize for Medicine, 1903. Founder of the science of Phototherapy.
- Firdousi, nom de plume of Abdul Kasim Mansur** (c. 930-1020), Persian poet whose great epic *Shah-nama*, or *Book of Kings*, relates the history of Persia in 60,000 verses.
- Fisher, Most Rev. Geoffrey Francis, P.C., G.C.V.O., M.A., Hon. D.D.** (b. 1887). Archbishop of Canterbury since 1945, the 99th holder of the office; Bishop of London, 1939-45; Bishop of Chester, 1932-39; Headmaster Repton School, 1914-32.
- Fisher, Rt. Hon. Herbert Albert Laurens, O.M., F.R.S.** (1865-1940), President of the Board of Education, 1916-22. His comprehensive *History of Europe* shows a vast range of knowledge and a great ability to generalise.
- FitzGerald, Edward** (1809-1883), English poet who gained world-wide fame by his translation of *The Rubaiyat of Omar Khayyam* (1859).
- Fitzroy, Vice-Admiral Robert, F.R.S.** (1805-1865). Attained celebrity as a meteorologist, and in 1854 was made superintendent of the Meteorological Department, and was the introducer of the system of storm warnings which were the beginning of weather forecasts.
- Flammarion, Camille** (1842-1925), French astronomer, famous for his observations on double stars, star-drift and popular lectures and books on astronomy. Founded the Astronomical Society of France in 1887. His best-known work is *L'Astronomie Populaire*.
- Flamsteed, John, F.R.S.** (1646-1719), was the first English Astronomer Royal, and a close friend of Sir Isaac Newton, whom he aided in many of his experiments.
- Flaubert, Gustave** (1821-80), one of the greatest of French novelists and creator of *Madame Bovary* which took six years to write. His extraordinary perfection of style was attained only through incessant labour. He hated anything lax and was only satisfied when he had exactly expressed his meaning. Other works were *Salambo*, *La Tentation de Saint-Antoine* and his drama *Le Candidat*.
- Flaxman, John, R.A.** (1755-1826), a great English sculptor who was born at York, and at 20 was employed as modeller by Josiah Wedgwood. In 1787 he went to Rome, where he stayed 7 years. In 1800 he was elected R.A. and in 1810 became professor of sculpture to the Royal Academy.
- Flecker, James Elroy** (1884-1915), English poet who early showed signs of becoming one of the most notable poets of his generation, and lived to see his works recognised by the best critics of his time. His works include *Golden Journey to Samarkand*, *Hassan* (staged in London, 1923) and *Don Juan*, as well as many lyrics.
- Fleming, Sir Alexander, F.R.S.** (1881-1955), as a bacteriologist he made many original contributions, including the discovery of the antibacterial enzyme lysozyme in 1922 and penicillin in 1928. Full recognition of his discovery came only during the war, when Sir Howard Florey separated the drug now used for treatment from the original penicillin. Awarded Nobel Prize for Medicine jointly with Sir H. Florey and Dr. E. B. Chain, 1945. Retired as director of the Wright-Fleming Institute of Microbiology at St. Mary's Hospital, London, in 1954.
- Fleming, Sir (John) Ambrose, F.R.S.** (1849-1945), was the inventor of the thermionic valve which revolutionised wireless telegraphy and also made wireless telephony possible. Prof. of Electrical Engineering in University College, London, 1885-1926.
- Fletcher, John** (1579-1625), the famous collaborator with Beaumont in numerous plays which were popular in their day and take high position in the dramatic literature of the country.
- Floure, Prof. Herbert John, D.Sc., F.R.S.** (b. 1877), a distinguished anthropologist who was Prof. of Geography at Manchester University 1930-44, and Prof. of Geography and Anthropology, University College of Wales, 1904-30.
- Flinders, Matthew** (1774-1814), an explorer and navigator, who made important discoveries in and around Australia. He sailed through Bass Strait, so called in honour of his surgeon.
- Foch, Marshal Ferdinand, O.M.** (1851-1929), Generalissimo commanding the Allied Forces in France from March 1917 until after the Armistice was signed, Nov. 11, 1918. Under his direction the great German offensive was checked and turned at the Marne in July 1918. He followed up this success with a series of rapid attacks culminating in the German surrender, Nov. 11, 1918, when he imposed the conditions of the Armistice.
- Fokine, Michel** (1880-1944), was the famous Russian dancer and Master of the original Russian Ballet, to whom the modern renaissance of ballet may be largely attributed. A dominating figure in the world of ballet who became choreographer to Diaghilev's company.
- Fokker, Anthony Herman Gerard** (1890-1939), was a famous Dutch airman and aeronautical engineer, and designer and builder of the well-known Fokker military and commercial aeroplanes.
- Fonteyn, Dame Margot (Mme. Roberto de Arias), D.B.E.** (b. 1919), Prima ballerina of the Sadlers Wells ballet and acclaimed as the foremost English dancer of to-day.
- Forbes, (Joan) Rosita, F.R.G.S.** (b. 1893), the well-known traveller and authoress. She has travelled and explored in Abyssinia, and crossed the Libyan desert in native costume in 1920.
- Forbes-Robertson, Sir Johnston** (1853-1937), actor-manager, trained as an artist, but studied under Phelps, and went on the stage, and became a leading player with the Bancroft and Hare companies, and then successfully entered upon management.
- Ford, Henry** (1863-1947), founder of Ford Motor Co., 1903, of which he was President until 1919, when he was succeeded by his son, Edsel B. Ford (1893-1943). Henry Ford became the world's leading industrialist and its second richest man. Was the pioneer of the cheap motor-car, of which, since 1920, more than a million have been produced annually.
- Forester, Cecil Scott** (b. 1899), British author. His many novels include the *Captain Hornblower* series.
- Forster, Edward Morgan, C.H., LL.D.** (b. 1879), novelist. Author of *A Passage to India*, *A Room with a View*, and *Abinger Harvest*.
- Fortescue, Hon. Sir John William, K.C.V.O.** (1859-1933), who wrote the history of the British Army, in 13 vols.
- Fortuny y Carbo, Mariano** (1830-1874), Spanish painter celebrated for *Choosing a Model*, *The Snake Charmer*, and *Moors playing with the Vulture*.
- Foscari, Francesco** (c. 1372-1457), Doge of Venice from 1423 to 1457. A great historical character, who governed Venice with a firm hand and increased her renown.
- Fosdick, Rev. Harry Emerson** (b. 1878), the noted American preacher. Was a Baptist Minister 1904-15, since when he has been Professor of Theology, Union Theological Seminary, New York, and Pastor, Riverside, formerly Park Avenue, Baptist Church, New York, 1926-46. One of the best known preachers in the U.S.A.
- Fourier, Francois Charles Marie** (1772-1837), the famous French socialist, who propounded a system of associated enterprise for giving everyone ample means on a system of communal industry. He made some attempts to carry out his Utopian ideas, but they did not succeed. He is best known by his *Traité de l'Association Domestique Agricole*.
- Fowler, Sir John, Bart., K.C.M.G.** (1817-1898), an eminent civil engineer, son of a Sheffield land surveyor. With Sir Benjamin Baker he was the engineer of the Forth Bridge and of the Metropolitan Railway.
- Fox, Rt. Hon. Charles James** (1749-1806) was the second son of the first Lord Holland.

- Entered Parliament at nineteen, and became a Lord of the Admiralty in 1770. His opposition to the Royal Marriage Bill drew down upon him the displeasure of George III. Through the whole of Pitt's Premiership he was that statesman's most formidable opponent. He favoured American Independence; opposed the war with France; was one of the impeachers of Warren Hastings; denounced the Slave Trade and advocated Parliamentary Reform. After the death of Pitt in 1806 he was made Foreign Secretary, but died a few months later, and was buried in Westminster Abbey.
- Fox, George (1824-1891)**, was the founder of the Society of Friends.
- Foxe, John (1516-1587)**, the English martyrologist, whose *Acts and Monuments (Book of Martyrs)* is one of the best-known books in the language. Born at Boston in Lincolnshire, he became a clergyman of the Anglican Church and died in London.
- Frampton, Sir George James, R.A., F.S.A. (1860-1928)**, an eminent sculptor. Was the sculptor of the well-known Peter Pan statue in Kensington Gardens, and the Edith Cavell Memorial in St. Martin's Place, London.
- France, Anatole (Jacques Thibault) (1844-1924)**, one of France's notable writers of fiction, showing a great mastery of character portrayal and satire. Most of his works are translated into English.
- Francis I. (1494-1547)**, was King of France from 1515 to his death. He was involved in many wars and was taken prisoner by Charles V. of Germany at the Battle of Pavia. After friendly relations had been established between Francis and Henry VIII., the two met on the "Field of the Cloth of Gold."
- Francis of Assisi, St. (1182-1226)**, founded the Franciscan Order of Monks and devoted himself to a holy life. He is a saint of the Roman Church, having been canonised by Pope Gregory IX., and is commemorated on October 4th.
- Francis, Sir Philip, K.B. (1740-1818)**, an English statesman, the reputed author of the famous *Letters of Junius*.
- Frank, César Auguste (1822-90)**, composer. Born at Liege in Belgium; studied at the Conservatory, Paris. His music is romantic, mystical, and personal in idiom. Wrote some of the most beautiful of organ music and his *Symphonic Variations for Piano and Orchestra*, *Sonata for Violin*, and the *Symphony in D* rank him, with his younger contemporary Debussy, among the greatest of nineteenth-century musicians.
- Franco, General Francisco (b. 1892)**, Spanish soldier and Dictator who served with the Spanish Forces in the Moroccan campaign of 1920-23 and was later Head of the Military Academy at Saragossa. Chief of the General Staff 1935-36. Was Commander-in-Chief of the Nationalist Forces during the Spanish Civil War, 1936-39. President of Spain since Aug. 1939.
- Franklin, Benjamin, F.R.S. (1706-1790)**, the famous American statesman and philosopher, who after serving an apprenticeship as a printer attracted public attention by publishing his *Poor Richard's Almanac*. He then began a series of scientific experiments, inventing amongst other things the lightning conductor. He was for ten years a member of the General Assembly; then lived in Britain as agent for his State for eighteen years; returning to America he took part in framing the Constitution of the United States.
- Franklin, Rear-Admiral Sir John, F.R.S. (1786-1847)**, the famous Arctic explorer, whose final expedition in command of the *Erebus* and *Terror* ended disastrously, all the members of the expedition perishing. Many attempts were made to discover Franklin, but without obtaining anything save very fragmentary knowledge concerning his fate. He was born at Spilsby.
- Fraser of the North Cape, Admiral of the Fleet, Lord, G.C.B., K.B.E. (b. 1888)**, commanded Home Fleet, Eastern Fleet, and British Pacific Fleet successively, 1943-46. First Sea Lord, 1948-51.
- Fraser, Lieut.-Col. Sir (William Jocelyn) Ian, C.H., C.B.E., M.P. (b. 1897)**. Blinded when on active service as a young regular Army officer. Has since devoted himself to the welfare of the blind and of ex-servicemen generally. Chairman of St. Dunstan's since 1921. President of the British Legion, 1947. A Governor of the B.B.C., 1937-39 and 1941-46. Conservative M.P.
- Frazer, Sir James George, O.M., LL.D., F.R.S. (1854-1941)**, was an eminent British anthropologist; author of *The Golden Bough* and numerous other works on his subject.
- Frederick I. (c. 1123-90)**, Holy Roman emperor from 1152. Nicknamed Barbarossa. A commanding personality, he won for the empire prestige unknown since Otto the Great. Though failing to subjugate his Italian territories, for his armies suffered from the Italian climate, he dominated his German subjects, expelled the semi-independent Duke of Saxony, Henry the Lion, from his duchy, encouraged the German cities, and was a national hero. Though not an ascetic, he was remarkable for an impeccable private life, distinguished himself on the second Crusade, and was drowned in Asia Minor on his way to the third.
- Frederick II (1194-1250)**, Holy Roman Emperor, an enlightened ruler whose court in Sicily was a centre of culture and learning, attracting Jewish, Mohammedan, and Christian scholars. Forced by illness to return from crusade in 1227, he was excommunicated by Pope Gregory IX.; still excommunicated, he again set sail for Palestine and by skilful diplomacy gained possession of Jerusalem, Bethlehem, and Nazareth. Frederick was a philosopher and man of science and delighted in exploding superstition. He founded the university of Naples, was a patron of the medical school at Salerno, wrote a treatise on falconry, and gave Sicily a code of laws.
- Frederick II (1712-1786)**, usually called Frederick the Great, was King of Prussia from 1740 to the time of his death, and by his masterful government and military successes greatly increased the power of his country. He was a scholarly potentate, and his published works extend to thirty volumes.
- French, Field-Marshal Sir John. (See Ypres, 1st Earl.)**
- Freud, Sigmund, M.D. (1856-1939)**, was Professor of Neurology, Vienna University, 1902-38. An eminent psychoanalyst; author of many books on his subject. Left Austria after the *Anschluss* to take up permanent residence in England. Was elected a foreign member of the Royal Society in 1936.
- Freyberg, Bernard Cyril, Lieut.-Gen. Lord, V.C., G.C.M.G., K.C.B., K.B.E., D.S.O., (b. 1889)**. Gov.-Gen. of New Zealand, 1946-52. Served with distinction in both world wars. Commanded Allied troops on Crete, 1941. Won third bar to D.S.O. in Italy, 1945.
- Friese-Greene, William (1855-1921)**, inventor of the cinematograph. His pioneer work in commercial photography brought him no profit, and for many years he lived in poverty.
- Frobisher, Sir Martin (1535-1594)**, was the earliest of British navigators to attempt to find the North-West passage from the Atlantic to the Pacific through the Arctic seas, and his name is commemorated in Frobisher's Strait, to the south of Baffin Land. For his services in connection with the defeat of the Spanish Armada he was knighted.
- Froebel, Friedrich Wilhelm August (1782-1852)**, was the founder of the Kindergarten system of education, the object of which is "to give children employment in harmony with their nature, to strengthen their bodies, to exercise their senses and lead them up to the original ground of all life, to the idea of unity with themselves."
- Froissart, Jean (1337-1410)**, a celebrated French writer who visited England and Scotland, and was the author of the famous *Chronicles*, which tell us so much of the achievements of the barons of old.
- Frost, Robert (b. 1874)**, best loved of American poets. "Stopping by Woods on a Snowy Evening"; "Birches"; "The Death of the Hired Man"; "After Apple-Picking". Awarded Pulitzer Prize for poetry in 1924, 1931, 1937, and 1943.
- Froude, James Anthony (1818-1894)**, the celebrated historian and biographer of Carlyle.
- Fry, Captain Charles Burgess, R.N.R., M.A., F.R.G.S. (b. 1872)**, known as "the Commander"; outstanding athlete and sportsman, who captained Oxford at cricket, association foot-

ball, and athletics, and reached international status in all three sports. Hon. director of the Nautical School Training Ship *Mercury*, where he has shown great interest in the training of boys for the sea.

**Fry, Elizabeth** (1780-1845), a Norwich lady who devoted much of her life to the promotion of prison reform, and achieved considerable reputation as a preacher. She belonged to the Society of Friends.

**Fry, Christopher** (b. 1907), English poet and dramatist of Quaker family. Author of *The Lady's Not for Burning*, *Venus Observed*, and *The Darkness is Light Enough*.

**Fry, Roger** (1866-1934), English art critic and painter. Introduced the work of Cézanne and the post-impressionists into England. His most important book is *Vision and Design*. Biography by Virginia Woolf (1940).

**Fuller, Thomas** (1608-1661), the author of *Worthies of England* and *A Church History of Britain*, two well-known and valuable works.

**Fulton, Robert** (1765-1815), an inventive American engineer who distinguished himself by experiments in the application of steam to navigation, and finally in 1807, launched the *Clermont* on the Hudson.

**Furniss, Harry** (1854-1925), British caricaturist, was born in Wexford and came to London as a young man. He was a famous cartoonist and served on the staff of *Punch* from 1878-94. Illustrated the works of Dickens and Thackeray.

**Furse, Dame Katharine**, G.B.E., R.R.C. (1875-1952), pioneer of women's services, daughter of John Addington Symonds, C.-in-C. V.A.D.S. 1914-17; Director W.E.N.S., 1917-19; Dir. World Bureau Girl Guides and Girl Scouts, 1928-38.

**Furtwängler, Wilhelm** (1886-1954), famous German conductor, and popular in Great Britain for his visits with the Berlin Philharmonic Orchestra, of which he succeeded Herr Nikisch as conductor. This celebrated conductor of the Berlin State Opera Concerts won international fame, and had a triumphant success in London on each of his visits.

**G**

**Gade, Niels Wilhelm** (1817-90), Danish composer and a pioneer of the Danish school of music. First became known through his overture *Echoes of Ossian*, 1841, which brought him to the notice of the King, who sent him to study at Leipzig. There he met Mendelssohn, whom he succeeded as conductor of the Gewandhaus concerts. In 1848 he returned to Copenhagen and with J. P. E. Hartmann founded the musical conservatorium.

**Gainsborough, Thomas, R.A.** (1727-1788), English landscape and portrait painter, whose works are remarkable for their grace and refinement. His *Duchess of Devonshire* was stolen when exhibited in 1876 and recovered in America some years later.

**Gaitskell, Rt. Hon. Hugh Todd Naylor, C.B.E., M.P.** (b. 1906), elected leader of the Parliamentary Labour Party when Earl Attlee retired in 1955. Has had distinguished career as economist, Civil Servant, and Chan. of Exchequer, 1950-51. M.P. for South Leeds since 1945.

**Galen, Claudius** (130-200), a famous physician who was skilled in anatomy and physiology and became medical adviser to Marcus Aurelius. Many of his treatises still survive.

**Galileo Galilei** (1564-1642), the great Italian astronomer and founder of dynamics. First discovered the importance of acceleration and established the law of falling bodies. He was also one of the first to construct a telescope with which he made many important discoveries. He was condemned by the Inquisition which put an end to science in Italy for many centuries.

**Gall, Franz Josef** (1758-1828), the German physician who founded the study of phrenology.

**Galsworthy, John, O.M.** (1867-1933), an English novelist and dramatist of force and originality who wrote a great series of novels dealing with the history of an upper middle class family. Awarded Nobel Prize for Literature in 1932.

**Galton, Sir Francis, F.R.S.** (1822-1911), an eminent scientist and traveller, whose studies in hereditary transmission have been of great service, and whose expositions in regard to the mark-

ings of finger-tips resulted in the adoption of what is known as finger-print identification in police cases. Originated the study of eugenics, and one of the first to apply mathematics to biological problems. He was a cousin of Darwin.

**Galvani, Luigi** (1737-1798), a distinguished Italian scientist, whose experiments during a course of lectures on anatomy at Bologna discovered the principle of animal electricity: hence the term Galvanism.

**Gama, Vasco da** (c. 1460-1524), the adventurous Portuguese navigator who discovered the sea route to India in 1498 by doubling the Cape of Good Hope.

**Gandhi, Mohandas Karamchand** (1869-1948), great Indian patriot, social reformer, and moral teacher. Believed in the doctrine of non-violence. In the tense situation following the granting of independence to India, he strove to promote the co-operation of all Indians but was assassinated on his way to an evening prayer meeting.

**Garbo, Greta** (b. 1905), Swedish film actress. The most arresting and poetical actress on the screen of her day.

**Garcia, Manuel** (1805-1906), a Spanish musician and singing-master, brother of Mmes. Malibran and Viardot, and tutor of many celebrities from Jenny Lind downwards. He published books on singing, and invented the laryngoscope.

**Gardiner, Samuel Rawson** (1829-1902), an English historian, whose works deal mainly with the period from the accession of James I. to the end of the Commonwealth. Many of his books remain the standard authorities on their subjects.

**Garibaldi, Giuseppe** (1807-1882), the famous Italian soldier and patriot. In 1834 he was condemned to death for being concerned in a plot to seize a Government vessel, but escaped to South America, and for some years was engaged in various conflicts for liberty in that hotbed of revolution. Returning to Italy in 1848, he joined the Roman Republican movement, but was ultimately compelled to fly for his life, and emigrated to New York. In 1854 he returned to Italy, and on the outbreak of war in 1859 had a command given to him, and scored several victories against the Austrians. The next year found him at the head of a great volunteer army, intent upon liberating Italy. This tremendous task he successfully carried through, earning the admiration of the world for his generalship and patriotism.

**Garrick, David** (1717-1779), the leading tragic actor of his time and a highly successful manager. Was buried in Westminster Abbey.

**Garrison, William Lloyd** (1805-1879), an eminent anti-slavery leader of America.

**Garvin, James Louis, C.H.** (1868-1947), editor of the *Observer*, 1908-42, and of the *Encyclopaedia Britannica* (14th ed.), 1926-29.

**Gaskell, Mrs. Elizabeth Cleghorn** (1810-1865), an English novelist of acknowledged power, whose *Mary Barton*, *Ruth*, *Cranford* and other stories dealing largely with Lancashire life achieved great popularity. Her *Life of Charlotte Brontë* was also a remarkable book.

**Gautier, Theophile** (1811-1872) was an eminent French critic and novelist who at one time filled the position of secretary to Balzac. His romance, *Mademoiselle de Maupin*, caused a great sensation. He was also a poet of considerable power.

**Gay, John** (1685-1732), the English poet who penned *The Beggar's Opera* and the well-known collection of poetic fables. He was a writer of great wit and fancy, and much patronised by Society.

**Gay-Lussac, Joseph Louis** (1778-1850), a French chemist, whose experiments in connection with gases and vapours were of much scientific importance.

**Ged, William** (1690-1749), was one of the inventors of the process of stereotyping. He was a goldsmith and a native of Edinburgh.

**Geikie, Sir Archibald, O.M., K.C.B., F.R.S.** (1835-1924), one of the most noted geologists of our time. President of the Royal Society 1908-13.

**Geikie, Prof. James, F.R.S.** (1839-1915), brother of the foregoing, and his successor in the Chair of Geology at Edinburgh University in 1882. His work on *The Great Ice Age* is a notable one.

**Genseric** (c. 395-477), Vandal King of Spain in 419, after being driven into Africa by the Visigoths, subdued the Roman provinces of North Africa, and afterwards crossed to Italy and sacked and pillaged Rome, doing irreparable damage to public monuments and sculptures. Hence the term "vandalism."

**Geoffrey of Anjou, Duke of Brittany** (1113-51), founder of the Angevin dynasty of England, was son-in-law of Henry I. and father of Henry II., the first Angevin or Plantagenet king.

**Geoffrey of Monmouth** (1100-1154), was the author of the famous Old English chronicle which bears his name. He was born at Monmouth, and became Bishop of St. Asaph in 1152. His *Chronicon* is a compilation from older authors, and is notable for having contained the stories of King Arthur, King Lear, and Cymbeline.

**George I.** (1660-1727) was King of Great Britain from 1714 to his death, ascending the throne as direct descendant of James I. His reign saw many memorable events, including the Jacobite Rebellion, the South Sea Bubble, and the beginning of Walpole's great ministry.

**George II.** (1683-1760), son of the last-named, was King of Great Britain from 1727 to 1760. His reign covered a prosperous period in spite of wars and rebellions, and saw the Empire extended in India and North America, but the King was personally a man of limited power and achievement.

**George III.** (1738-1820), was the grandson of George II., and reigned from 1760 to 1820. He was a popular monarch for the most part, possessing all the domestic virtues and of simple tastes. The war with America lasted from 1775 to 1782, when the American States gained their independence, and from 1793 to 1815 the war with France was kept up with but little interruption. On the other hand, the Empire in India was strengthened and enlarged, and the power of Great Britain on land and sea was splendidly shown.

**George IV.** (1762-1830) reigned from 1820 to his death, but filled the position of Prince Regent for some years previously. The King's personal character, in spite of the fact that he was called "The First Gentleman in Europe," showed such a want of dignity, and such an abandonment to licentiousness and frivolity, that he became very unpopular with the people.

**George V.** (1865-1936), was the second son of Edward VII. and Queen Alexandra. Entered the Navy as a cadet in 1877 and became second in the line of succession to the throne on the death of the Duke of Clarence in 1892. Married to Princess Mary of Teck in 1893. Succeeded to the throne May 6th, 1910, and celebrated his Silver Jubilee in 1935. Maintained the royal tradition of strenuous public engagements combined with unfailing attention to business of State. His Christmas Day broadcasts are remembered with affection by millions throughout the Commonwealth.

**George VI.** (1895-1952), (Albert Frederick Arthur George of Windsor), second son of George V., was called to the throne in December 1936 on the abdication of his elder brother, Edward VIII. His reign was marked by the ordeal of war, by world revolution and social change and at the same time by a remarkable degree of constitutional harmony which his fine example and personal qualities did much to achieve.

**George, Henry** (1839-1897), American political economist whose "single tax" on land values as a means of solving economic problems is expounded in his *Progress and Poverty*, pub. 1879.

**George, Saint**, the tutelary saint of England, adopted by Edward III. He is believed to have been a native of Cappadocia and a vigorous champion of Christianity in the days of Diocletian, and to have suffered martyrdom at Nicomedia 303 A.D. The dragon which he is said to have slain symbolises the powers of evil over which he triumphed.

**German, Sir Edward** (1862-1936), English composer, whose work has the fluency of his master Sir Arthur Sullivan and the melody and charm of English dances and lyrics.

**Gesner, Konrad von** (1516-1565), a scholarly Swiss naturalist, and father of the science of zoology.

**Ghiberti, Lorenzo** (1378-1455), Florentine sculptor whose bronze doors, beautifying the baptistery

in Florence, were described by Michaelangelo as fit for the gates of paradise.

**Gibbon, Edward** (1737-1794), celebrated historian of the *Decline and Fall of the Roman Empire*.

**Gibbons, Grinling** (1648-1720), the celebrated wood-carver and sculptor, was born at Rotterdam and was brought to the notice of Charles II. by Evelyn, the diarist. The choir stalls of St. Paul's and the carving in the Wren library at Trinity College, Cambridge, are his work.

**Gibbons, Orlando** (1583-1625), a noted English composer of Church music who was organist of the Chapel Royal.

**Gibson, Charles Dana** (1867-1944), the famous American black-and-white artist and book illustrator, creator of "the Gibson girl."

**Gide, André Paul Guillaume** (1869-1951) French man of letters, a novelist, dramatist and a poet. His works are characterised by acute psychological analysis and an absolute mastery of style. Awarded the Nobel Prize for Literature in 1947.

**Gielgud, Sir (Arthur) John** (b. 1904), English actor, member of the Terry family. Began by walking on at the Old Vic, and, later, became a Shakespearean actor, making a marked success as Hamlet, Richard III., and Prospero.

**Gigli, Beniamino** (b. 1890), the great Italian operatic tenor of the Metropolitan Opera House, New York. The possessor of a voice of great natural beauty, and one of the finest exponents of the music of Puccini and Verdi.

**Gilbert, Sir Alfred, M.V.O., R.A.,** (1854-1934), sculptor and designer of gold and silver objects. Among his best-known sculptures are *Perseus Arming*, *Icarus*, *Eros* in Piccadilly Circus, the Shaftesbury Memorial and the Duke of Clarence Memorial at Windsor.

**Gilbert, Sir Humphrey** (1539-1583), was knighted by Queen Elizabeth for his bravery in Ireland, and later on made voyages of discovery, and added Newfoundland to the British possessions. He was drowned off the Azores, his memorable last words being, "We are as near to heaven by sea as on land."

**Gilbert, Sir John, R.A.,** (1817-1897) one of the most prolific artists of his time. His illustrations to Staunton's edition of Shakespeare are remarkable for their picturesqueness and dramatic power.

**Gilbert, William** (1543-1603), physician to Queen Elizabeth I, has been called the father of electric and magnetic science. Published his great book on the magnet in 1600.

**Gilbert, Sir William Schwenck** (1836-1911), English humorist and playwright, is best remembered for the "Bab Ballads" and for the famous Savoy series of operas in which he collaborated with Sir Arthur Sullivan. Among the operas were *H.M.S. Pinafore*, *Patience*, *Iolanthe*, *The Mikado*, *The Gondoliers*, and *The Yeomen of the Guard*. The Gilbertian humour of plot and paradox, the kindly satire and the delightful metres combine with Sullivan's music to make the operas unforgettable and ever popular.

**Gill, Arthur Eric Rowton, A.R.A.** (1882-1940), English sculptor and engraver. His first piece of sculpture, *Madonna and Child*, was produced in 1910 and in 1913 he received the commission to carve the Stations of the Cross for Westminster Cathedral. In 1922-23 he carved the relief, *Christ Driving the Money-changers from the Temple*, which is placed at the entrance of Leeds University as a War Memorial. Executed the carvings on Broadcasting House, London; also worked as a designer for printing; the Gill Sans type and the George VI stamps were his designs.

**Gillray, James** (1757-1815), the eminent caricaturist of the time of George III., who produced upwards of a thousand political cartoons.

**Giotto di Bondone** (1266-1337), Italian painter, sculptor, and architect, whose beautiful tower at Florence and his many works of art in various churches there, as well as the churches themselves, form splendid monuments to his memory.

**Gissing, George Robert** (1857-1903), English author whose novels deal with poverty and the sociological problems of his day. *New Grub Street*, *The Unclassed*, *Charles Dickens*, *A Critical Study*, *The Private Papers of Henry Ryecroft* are among his best-known works.

**Giulio Romano or Giulio Pippi** (c. 1492-1546) was

- a pupil of Raphael, and himself a distinguished painter and architect.
- Gladstone, Rt. Hon. William Ewart** (1809-98), the great Liberal statesman of the latter part of the nineteenth century, popularly known as the Grand Old Man. Entered Parliament in 1832 as a Tory, held various offices under Peel, and joined the Aberdeen coalition in 1852. From that time he served several terms as Chancellor of the Exchequer and was Liberal Prime Minister, 1868-74, 1880-85, 1886, and 1892-94. His financial policy was able, accurate, lucidly exposed, and very successful. His first ministry were active, their legislative achievements including the Disestablishment of the Church of Ireland, the Education Act of 1870, the Ballot Act of 1872, and the Irish Land Act, but in 1873 they were aptly described by Gladstone's great rival, Disraeli, as "exhausted volcanoes." His second ministry, returned to power after the astonishing Midlothian campaign, witnessed the defeat by the Boers at Majuba, the bombardment of Alexandria, and the disaster of General Gordon at Khartoum. His last two ministries were marked by the adoption of the policy of Home Rule for Ireland, which he was unable to carry. Gladstone was a good classical scholar and an earnest high churchman, who in 1838 published the *State in its Relations with the Church*, a work of considerable interest.
- Glendower, Owen** (1359-1415), a famous Welsh chieftain who proved a formidable opponent to Henry IV., and gathered around him a great following of Welshmen, whom he led with much bravery, though finally defeated in 1405.
- Gluck, Christoph Willibald** (1714-1787), one of the most eminent composers of opera of the 18th century. *Orfeo* and *Iphigénie* are his best-known works.
- Goddard, Lord, P.C., Q.C.** (b. 1877), Lord Chief Justice of England since 1946.
- Godfrey of Bouillon** (c. 1061-1100) was the leader of the First Crusade, and after the conquest of Jerusalem, exchanged the title of King for that of "Protector of the Holy Sepulchre." He liberated the Holy Land, and was buried on Mount Calvary.
- Godiva, Lady** (1040-1080) was the pious and beautiful wife of Leofric, Earl of Chester and Lord of Coventry. Having appealed to her lord to remit certain impositions from the inhabitants, he promised to grant her request if she would ride naked through the town. This she did, having first passed the word to have blinds and shutters drawn at the appointed hour, and so obtained the people's ransom.
- Godwin, Earl of the West Saxons** (990-1053), was one of the most influential noblemen of his time, and gave his daughter in marriage to Edward the Confessor, against whom he was afterwards in rebellion. Godwin's son, Harold, claimed the throne after Edward's death, but was killed at Hastings.
- Godwin, William** (1756-1836), English Radical philosopher, author of *Political Justice* and a novel, *Caleb Williams*. Married Mary Wollstonecraft (1759-97), author of *A Vindication of the Rights of Women*, in which she pleaded for the equality of the sexes, particularly in education. Their daughter, Mary Wollstonecraft Godwin (1797-1851), married the poet, Shelley, and was the author of *Frankenstein*.
- Goethe, Johann Wolfgang von** (1749-1832), German poet of great gifts and versatility, one of the great world figures to whom we owe our cultural heritage. Born at Frankfurt on Main of a cultivated and well-to-do family, he was able to integrate all the powers with which nature had endowed him in one harmonious personality. Before he went to Weimar at the age of 25 he had written *Götz von Berlichingen* and *Werthers Leiden* and many beautiful lyrics. He settled at Weimar in 1775, received a Ministerial appointment and actively interested himself in the welfare of the state. *Faust*, the great dramatic poem which accompanied him from early manhood to the end, epitomises his whole life and was his crowning achievement. Not only was he a great poet, but scientist and philosopher besides.
- Gogol, Nikolai Vasilievich** (1809-52), one of the greatest of Russian novelists whose stories of provincial life are in the same setting as his masterpiece, *Dead Souls* (1842), of which an English translation appeared in 1906. Was also a playwright, his most successful play being *The Government Inspector* (1836), a satire on provincial bureaucracy.
- Goldsmith, Oliver** (1728-1774), the celebrated author of *The Vicar of Wakefield*, *The Deserted Village*, and *She Stoops to Conquer*. The son of a poor Irish curate, he found his way to London in 1756, subsequently devoting himself entirely to literature, being befriended by Dr. Johnson and held in great esteem by Reynolds, Burke and other eminent men of the time. He was buried in the churchyard of the Temple.
- Goodyear, Charles** (1800-1860), an American, discoverer of the art of vulcanising rubber, by which the utility of the material was greatly extended.
- Goossens, Sir Eugene** (b. 1893), a well-known English composer and operatic conductor. Has been associated with many famous orchestras in both England and America. His compositions include chamber music, orchestral pieces, songs, as well as the operas, *Judith* and *Don Juan*.
- Gordon, Adam Lindsay** (1833-1870), an Australian poet who wrote many stirring ballads and poems, his *Bush Ballads* and *Galloping Rhymes* being a great success. As a settler, however, he failed, and, after numerous unfortunate experiments, committed suicide.
- Gordon, Major-General Charles George, C.B.** (1833-1885), a distinguished soldier, administrator, and earnest Christian, who had a most adventurous, useful, and self-sacrificing career. He saw active service in the Crimea, China, and India, and in 1873 was made Governor of the Equatorial provinces of Egypt. In 1877 he went out to the Sudan for the Egyptian Government, and in 1884 again proceeded thither on behalf of the English Government to deal once more with the difficulties which had arisen consequent on the Mahdi's Rebellion. While defending Khartoum he was murdered by the Mahdi's forces on the palace staircase.
- Gordon, Lord George** (1751-1793), was tried for treason as the instigator of the Anti-Popery riots of 1780, but acquitted on the ground that he had no treasonable intention. Some years later he was committed to Newgate for libelling Marie Antoinette and died there of fever.
- Gorky, Maxim (Alexi Maximovitch Pleshkov)** (1868-1936), Russian novelist and writer whose works are remarkable for their realistic power. Was in turn shoemaker's apprentice, gardener, watchman, scullion on a packet boat and baker's apprentice. In 1892 his first story was published, and he found his vocation. Many of his works have been translated into English.
- Gosse, Sir Edmund, C.B., LL.D., Litt.D.** (1849-1928), a distinguished poet and critic who wrote lives of Gray, Congreve and Dr. Donne, and his *History of 16th Century Literature* and *History of Modern English Literature* show great critical power and appreciation. Was librarian to the House of Lords 1904-14, and wrote a book on French literary men and a life of Sir Thomas Browne. In 1907 he published *Father and Son*, being recollections of his father, the late Philip Gosse, and of his own early career. His *Collected Essays* (5 vols.) were issued in 1913. In 1917 edited *Posthumous Poems of Swinburne*.
- Gould, Sir Francis Carruthers** (1844-1925). Perhaps the cleverest political caricaturist of his day, and did also considerable journalistic work as assistant editor of the *Westminster Gazette*.
- Gould, Jay** (1836-1892), a well-known American financier and railway magnate, who acquired an enormous fortune and considerable notoriety in Wall Street speculations.
- Gounod, Charles François** (1818-1893), the eminent French composer, who won a position of the first rank by his *Faust* produced in 1859, one of the most successful operas of the 19th century. Other famous operas of his are *Roméo et Juliette* and *Le Médecin malgré lui*. He also composed much sacred music of an intensely spiritual character, including his oratorio, *The Redemption*.
- Gower, John** (1325-1408), an English poet of the time of Chaucer, who wrote many elegant ballads and devotional poems. His *Confessio Amantis* was his outstanding work.
- Goya y Lucientes, Francisco Jose** (1746-1828), a

- famous Spanish painter and etcher, and one of the greatest of Spanish artists, and renowned for his wonderful series of etchings and satirical drawings. There are four Goya paintings in the National Gallery. One of his fine portraits is that of the Duchess of Alva. In addition to portraits and genre he painted frescoes in the Cathedral at Saragossa. As versatile as he was facile, he also occupies a high position among etchers.
- Grace, Dr. William Gilbert** (1848-1915), renowned and almost legendary cricketer, who by his character and skill dominated English cricket for over forty years, and was probably the best-known man in England. Altogether in first-class cricket he scored 54,896 runs, including 126 centuries, and took 2876 wickets. Scored 1000 runs in May 1895; and three times made over 300 runs in an innings.
- Graham, John, of Claverhouse, Viscount Dundee** (1643-1689). Renowned for his sturdy adherence to the Stuarts, and headed a rebellion in Scotland against William and Mary, but was killed at the Battle of Killiecrankie.
- Grahame, Kenneth** (1859-1932), as a writer of books for children he ranked almost with Lewis Carroll. He is famous for *The Golden Age*, *Dream Days*, and *Wind in the Willows*, all of which achieved great popularity.
- Grahame-White, Claude** (b. 1879), aviator and engineer. Was the first Englishman to gain an aviator's certificate, 1909; won the Gordon Bennett Cup with the then record speed of 604 miles per hour in 1910, founded the first British Flying School and published many works on aircraft from both the historical and technical aspects.
- Grainger, Percy Aldridge** (b. 1882), U.S.A. citizen, born in Australia, pianist and composer. A brilliant player and an authority on folk song, the influence of which is apparent in all his compositions.
- Grant, General Ulysses Simpson** (1822-1885), the most distinguished American general of the Civil War. Was President of the United States from 1869 to 1876.
- Granville-Barker, Harley, D.Litt., LL.D., F.R.S.I.** (1877-1946), distinguished English dramatist, producer, and actor. Introduced plays of Ibsen and Shaw to British public. His own plays reflect influence of Shaw, and are particularly notable for their realistic dialogue.
- Grattan, Henry** (1746-1820), an Irish orator and statesman who, first in the Irish Parliament and afterwards in the Imperial Parliament, did memorable work for the cause of his country.
- Gray, Thomas** (1716-1771), the English poet, whose *Elegy written in a Country Churchyard* is one of the most beautiful in the language. His other poems were not numerous but included a fine *Ode on a Distant Prospect of Eton College* and a notable *Ode to Adversity*.
- Greeley, Horace** (1811-1872), founder of the *New York Tribune* and a political writer of great power and influence. Was an unsuccessful candidate for the United States Presidency in 1872.
- Green, John Richard** (1837-1883), an eminent English historian. Published a *Short History of the English People* in 1874.
- Greenaway, Kate** (1846-1901), a gifted book illustrator and water-colour artist, whose drawings of children were full of charm and delicacy and gained her great popularity and the warm approval of no less a critic than Ruskin.
- Greene, Graham** (b. 1904), author of the novels *Brighton Rock*, *The Power and the Glory*, *The Heart of the Matter* and a play *The Living Room*.
- Greenwood, Rt. Hon. Arthur, C.H.** (1880-1954), Lord Privy Seal, 1945-47; Minister without Portfolio, 1947. M.P. for Nelson and Colne, 1922-31 and for Wakefield, 1932-54. Prominent in educational and labour work.
- Gregory, St.** (257-336), was founder of the Armenian Church, and spent his last years in a cave at the foot of Mount Sebul.
- Gregory the Great, St.** (c. 540-604), Pope 590-604. The last great Latin Father and the forerunner of scholasticism. The real founder of the temporal power and the political influence of the papacy, he also maintained the spiritual claims of Rome, enforcing discipline, encouraging monasticism, defining doctrine, and adding to the music, liturgy, and canons of the Church. Thus he exerted enormous influence on the life and thought of the Middle Ages.
- Gregory VII** (c. 1020-85), Pope from 1073. Originally called Hildebrand. Battled for papal omnipotence within the Church, stamping on simony and the marriage of priests. His victory in the conflict of empire and papacy came when the emperor, Henry IV, did penance for three days in the snow at Canossa, but had the unfortunate result of leading to further internal dissensions in Germany and to papal absorption with power politics rather than to Gregory's aim of an ideal theocracy embracing all States.
- Gregory XIII** (1502-85), Pope, 1572-85; introduced the Gregorian calendar.
- Grenfell, Sir Wilfred Thomason, K.C.M.G., M.D.** (1865-1940), was Supt. of the International Grenfell Assn. 1911-40; Lord Rector of St. Andrews University, 1929-31. For 40 years worked among the deep-sea fisherman of Labrador, where he built hospitals, nursing stations and fitted out hospital ships. Author of several books on his work in Labrador.
- Grenville, Sir Richard** (1541-1591), the Elizabethan sea-captain, who with his one ship engaged a fleet of Spanish war-vessels off Flores, in 1591, was captured and shortly after died on the Spanish flagship *San Pablo*, an exploit celebrated in Tennyson's noble ballad, *The Revenge*.
- Gresham, Sir Thomas** (1519-1579), was the wealthiest London merchant and financier of his time. He built the first Royal Exchange and founded Gresham College. The son of Sir Richard Gresham (Lord Mayor of London), he succeeded his father as King's Agent at Antwerp, and proved an astute money-finder for the Court in four successive reigns, ending as Queen Elizabeth's "Royal Merchant."
- Greuze, Jean Baptiste** (1725-1805), French painter, whose works, especially his studies of girls, display much delicacy and beauty of handling.
- Grey, Charles, 2nd Earl, K.G.** (1764-1845), a great English Whig statesman under whose Premiership were passed the Reform Bill of 1832, the Bill abolishing slavery throughout the British Empire (1833), and the Poor Law Amendment Act, 1834.
- Grey, Lady Jane** (1537-1554), was the daughter of the Duke of Suffolk and great-granddaughter of Henry VII. On the death of Edward VI, she was proclaimed Queen, but only reigned for ten days, Queen Mary ousting her and maintaining the Tudor succession. Six months later Lady Jane and her husband, Lord Guildford Dudley, were executed.
- Grey of Fallodon, 1st and only Viscount, K.G., P.C.** (1862-1933). Under-Secretary for Foreign Affairs, 1892. Foreign Secy., 1905-16. He won high approval for his handling of the Balkan difficulties of 1912-13, and all through the difficult strain which preceded Germany's rush into war acquitted himself with force and dignity. Leader of Liberal Party in House of Lords until Aug. 1924. Chancellor of Oxford Univ., 1928-33.
- Grieg, Edvard Hagerup** (1843-1907), a Norwegian musical composer, who presented the characteristics of his country's music with strong accentuation in numerous compositions of great melodic beauty.
- Griffin, His Eminence Cardinal Bernard William** (b. 1899), Roman Catholic Archbishop of Westminster since 1943.
- Griffith, Arthur** (1872-1922), was the first President of the Irish Free State 1921; founder and first editor of *Sinn Féin* 1906-15, and founder of the *Sinn Féin* movement.
- Griffith, David Wark** (1880-1948), pioneer American film producer. Noted especially for his remarkable films *Broken Blossoms* and *The Birth of a Nation*. Invented much of the technique of the modern cinema, such as the close-up, the flash-back, and the fade-out, and developed many famous stars, including Mary Pickford, L. Barrymore, and D. Fairbanks, Sr.
- Grimm, the brothers Jakob Ludwig Karl** (1785-1863) and **Wilhelm Karl** (1786-1859), German philologists and folk-loreists who wrote the world-famous *Fairy Tales*. They planned a gigantic etymological dictionary of the German language, which is being completed by German scholars.
- Grimthorpe, 1st Baron, LL.D.** (1816-1905), was long known as Sir Edmund Beckett, Bt., K.C.

- Was a great authority on horology, and, with Professor Sir George Airy (q.v.), designed "Big Ben." He restored St. Albans Cathedral at his own cost.
- Gromyko, Andrei A.** (b. 1908). Russian diplomat and Deputy Foreign Minister. Ambassador to Britain, 1952-3, and to the U.S.A., 1943-46. Representative of the Soviet Union on the U.N. Security Council, 1946-49.
- Gronchi, Giovanni** (b. 1888), succeeded Signor Einaudi as President of the Italian Republic in 1955 and is a member of the left-wing of the Christian Democrat Party.
- Grossmith, George** (1847-1912), the well-known actor and entertainer. His father, George Grossmith the elder, was also a popular entertainer and lecturer, his brother, Weedon Grossmith, was an actor and artist of considerable attainments, and his son, George Grossmith (1874-1935), was a successful comedian, and the first to introduce revue and also cabaret entertainment into England.
- Grote, George** (1794-1871), English historian famous for his *History of Greece*, 1846-56, an epoch-making and standard work.
- Grofius, Huig van Groot** (1583-1645), Dutch jurist, the founder of international law. He was condemned to life imprisonment for supporting religious toleration but made a daring escape and found refuge in Paris, where he wrote his masterpiece *De Jure Belli et Pacis*.
- Grouchy, Marshal Emmanuel, Marquis de** (1766-1847), a famous Napoleonic general who, at Hohenlinden, Wagram, and in the Moscow retreat rendered signal service. After Waterloo he led the defeated army back to Paris.
- Grove, Sir George** (1820-1900) was a distinguished engineer and bridge and lighthouse builder, but better known as an enthusiastic lover of music, the study and performance of which in England he did much to promote. His *Dictionary of Music and Musicians* is the leading work of its kind.
- Grunther, Gen. Alfred M.** (b. 1899), succeeded Gen. Ridgway as Supreme Allied Commander Europe, 1953-.
- Guedalla, Phillip, M.A.** (1889-1944), was an English historian and essayist. Author of *The Partition of Europe* (1914), *The Second Empire* (1922), *Palmerston* (1926), *The Missing Muse* (1929), *The Duke* (1931), and other works.
- Guido Reni** (1575-1642) was one of the eminent Italian painters of the Bolognese school. His *Michael Vanquishing Satan*, *Magdalene*, and *The Massacre of the Innocents* are among the world's great pictures.
- Guitry, Sacha** (b. 1885), French dramatist and actor-manager, who has also appeared in films.
- Gustavus Adolphus, King of Sweden** (1594-1632), the "Lion of the North," after a lengthy campaign in Poland, entered the Thirty Years' War in support of Swedish interests and Protestant distress, won the Battle of Breitenfeld in 1631, and was killed in action the next year. Succeeded by his daughter, Christina, and his policy carried on by his minister, Oxenstierna.
- Guy, Thomas** (1644-1724), founder of Guy's Hospital, was a dealer in Bibles, speculator and money-lender, who after making a large fortune, bequeathed £300,000 for the erection and endowment of the famous hospital.
- Gwynne, Nell** (1650-1687), was originally, it is said, an orange girl of provincial birth, and afterwards a sprightly London dancer and actress, who became mistress to Charles II. Her eldest son was made Duke of St. Albans.
- H**
- Haakon VII., K.G., G.C.B., G.C.V.O.** (b. 1872), became King of Norway, Nov. 1905. 2nd son of Frederick VIII., King of Denmark. As Prince Charles he married Maud, youngest daughter of King Edward VII. Lived in England during German occupation of Norway.
- Hadfield, Sir Robert Abbott, Bt., F.R.S.** (1858-1940), English metallurgist whose discovery of manganese steel in 1882 brought him recognition from every steel producing country. Inventor also of silicon steel and many other special alloy steels and metallurgical improvements.
- Hadrian** (76-138) was Emperor of Rome in succession to his uncle Trajan, and one of the greatest of Roman rulers. He visited Britain, and in A.D. 121 built the wall between Newcastle and Carlisle for protection of his dominions against the Picts and Scots.
- Haeckel, Professor Ernst Heinrich** (1834-1919), an eminent German scientist and philosopher, and Professor of Zoology at Jena University. An earnest supporter of the Evolution theory, his writings became popular throughout Europe.
- Haifi, pseudonym of Shams ad-Din Mohammed** (1320-1389), great Persian lyrical poet. His principal work is the *Divan*, a collection of short sonnets called *ghazals*. The sobriquet *Haifi*, meaning one who remembers, is applied to any one who has learned the Koran by heart.
- Haggard, Sir Henry Rider, K.B.E.** (1856-1925), novelist who after one or two failures made a brilliant success with *King Solomon's Mines* in 1886, followed by *She, Jess*, and others.
- Hahnemann, Samuel Christian Friedrich** (1755-1843), the German physician who founded the system of homeopathy.
- Haig, Field-Marshal, 1st Earl of Bismersyde, K.T., G.C.B., O.M., G.C.V.O., K.C.I.E.** (1861-1928), C-in-C. of the British Expeditionary Forces in France and Flanders, 1915-19. His name is associated with the sale of poppies in aid of the British Legion.
- Haile Selassie I., G.C.B., G.C.M.G., G.C.V.O.** (b. 1891), Emperor of Ethiopia, April 1930 to May 1936, and since May 1941.
- Hakluyt, Richard** (1553-1616), the first of English naval historians. By his *Divers Voyages touching the Discovery of America, and Principal Navigations, Voyages, and Discoveries of the English Nation*, did much to help forward the colonising spirit.
- Haldane, Prof. John Burdon Sanderson, F.R.S.** (b. 1892), one of the ablest and most brilliant of present-day biologists; Prof. of Genetics, University College, London University, 1933-36. Prof. of Biometry, University College, London since 1937.
- Haldane, Viscount, P.C., K.T., O.M., F.R.S.** (1856-1928), sat for Haddingtonshire, 1885-1911. In 1901 was Vice-President of the Liberal Imperialist League, and at the close of 1905 was made War Minister and organised the Territorial Force. Lord Chancellor, 1912-15, and again in first Labour Government, 1924.
- Halévy, Ludovic** (1834-1903), a brilliant French writer who supplied Offenbach with libretti for some of his most famous comic operas; among them *La Belle Héloïse*, *La Grande Duchesse*, and *Barbe Bleue*. In conjunction with Meilhac he wrote several notable plays, of which *Frou-frou* was perhaps the most successful.
- Halifax, Charles Montague, Earl of** (1661-1715), seventeenth century financier who was responsible for the National Debt, the window tax, the revaluation of the currency, and the foundation of the Bank of England.
- Halifax, Edward F. L. Wood, Baron Irwin and 1st Earl of, K.G., P.C., O.M., G.C.S.I., G.C.I.E., T.D.** (b. 1881), has filled many difficult positions with distinction and success and was especially notable as Viceroy of India, 1926-31, Foreign Secretary, 1938-40, and British Ambassador in Washington, 1940-45. Has written a life of John Keble and been prominent in the life of the Church of England. Chancellor of Oxford University since 1933.
- Halifax, George Savile, Marquess of** (1633-95), author of *Advice to a Daughter and Character of a Trimmer*, was a gifted and independent politician, pamphleteer, and orator.
- Hallam, Henry** (1777-1859), a graceful and scholarly historian who contributed several important works. His *View of the State of Europe during the Middle Ages*, *Constitutional History of England*, and *Introduction to the Literature of Europe* are distinguished for their clearness of style and correctness of judgment.
- Hallé, Sir Charles** (1819-1895), a distinguished pianist and conductor who was born in Westphalia. Went to Paris to study music in 1836, and in 1848 settled in London, where he soon became known as a piano-player of the first rank. He organised an orchestra of high-class talent, and for many years conducted it in London and the provinces. He married Madam Norman Neruda (d. 1911), the celebrated violinist in 1888, and was knighted the same year.

**Halley, Edmund, F.R.S. (1656-1742)**, English Astronomer Royal from 1720 to his death and ranked next to Newton among the scientific Englishmen of his time. Made first magnetic survey of the oceans from the naval vessel *Paramour*, 1698-1700. Discovered what is known as Halley's comet.

**Hals, Franz (1584-1666)**, a famous painter of the Dutch School, who is represented in the leading galleries of Europe. The Wallace Collection has his world-famous picture, the *Laughing Cavalier*.

**Hamilton, Alexander (1757-1804)**, American statesman and economist, opponent of Thomas Jefferson, served as Secretary of the Treasury in Washington's cabinet from 1789-95. Though a monarchist by predilection, he urged the adoption of the Constitution, and in conjunction with Madison and Jay wrote the *Federalist*. Report on *Manufactures* proved a mine of arguments for future protectionists. Founded the Bank of New York. Killed in a duel with a political rival.

**Hamilton, Emma Lyon, Lady (1761-1815)**, was a woman of humble birth and great personal beauty who attained prominent notice by her association with Sir William Hamilton, British Ambassador at Naples, who married her, and afterwards with Lord Nelson, who conceived an infatuation for her.

**Hammarskjöld, Dag Hjalmar Agne Carl, D.Phil., Dr.Econ. (b. 1905)**, succeeded Mr. Trygve Lie in 1953 as Sec.-Gen. of the United Nations.

**Hammond, John Lawrence Le Breton (1872-1949)**, English journalist and historian whose works on social and industrial history, written mainly in collaboration with his wife, Barbara Hammond, include *The Village Labourer*, 1911; *The Town Labourer*, 1917; *The Skilled Labourer*, 1919; *The Rise of Modern Industry*, 1925; and *The Age of the Chartists*, 1930.

**Hamden, John (1594-1648)**, the English patriot who opposed Charles I.'s "Ship Money" tax, and by his resistance and eloquent advocacy of the wish of the people helped the Parliamentary cause.

**Hamsun, Knut**, pen-name of Knut Pedersen (1859-1952), Norwegian author and farmer, who in his youth struggled for existence, visited America twice and earned his living by casual labour. His works include *Sult (Hunger)*, which made him famous, and *Markens Grode (Growth of the Soil)*, which gained him the Nobel Prize in 1917. He preached an anti-materialist romantic gospel and was in sympathy with Nazi ideals.

**Handel, George Frederick (1685-1759)**, a German musical composer of great eminence, who passed most of his life in England, composing operas and musical compositions of many kinds, and ultimately achieving world-wide fame by his great series of oratorios, including *Esther*, *Deborah*, *Saul*, *Israel in Egypt*, *The Messiah*, *Samson*, and *Judas Maccabaeus*. Undoubtedly the greatest oratorio writer the world has produced. Was buried in Westminster Abbey.

**Hankey, 1st Baron, P.C., G.C.B., G.C.M.G., G.C.V.O., F.R.S. (b. 1877)**, Secretary to the Committee of Imperial Defence, 1912-28, to the War Cabinet, 1916-17, and to the Cabinet, 1919-33. Successfully organised the Cabinet Secretariat to cope with the problems raised by war and coalition, and proved it so valuable that it was maintained in times of peace. Was secretary at many conferences between the wars, including the Peace Conference, 1919, and five imperial conferences.

**Hannibal (247-183 B.C.)**, the renowned Carthaginian general, who led an army against Rome, and achieved many notable victories over superior numbers. Was defeated by Scipio at the Battle of Zama, and afterwards suffered exile, and poisoned himself.

**Harcourt, Rt. Hon. Sir William Vernon, F.R.S. (1827-1904)**, barrister, author, Liberal statesman. An enthusiastic supporter of Mr. Gladstone.

**Hardicanute (1019-1042)**, son of Canute the Great, was King of England from 1040 to 1042, and imposed the tax called Danegelt. He was the last Danish sovereign of this country.

**Hardie, James Keir (1856-1915)**, a Socialist politician and Labour representative who acted as editor of the *Miner* and the *Labour Leader* from 1887 to 1904. During his early life he worked in a Scottish coal pit, but in 1882 became

a journalist, and entered Parliament as member for West Ham (South) in 1892-95, being the first Socialist to be elected to the House of Commons. First Chairman of the Parliamentary Labour Party, 1906-8, M.P. for Merthyr Tydvil from 1900 till his death.

**Hardinge of Penshurst, 1st Baron, K.G., P.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., I.S.O.**, formerly Sir Charles Hardinge (1858-1944), filled many important diplomatic appointments between 1880 and 1906—at Constantinople, Berlin, Washington, and Petrograd. Permanent Under-Secretary of State for Foreign Affairs, 1906-10 and 1916-20. From 1910-16 was Viceroy of India. Ambassador in Paris, 1920-22.

**Hardwicke, Sir Cedric Webster (b. 1893)**, English actor who made his debut in *The Monk and the Woman* in 1912. Has acted in many Shaw and Shakespearian plays, and is also a distinguished film actor.

**Hardy, Thomas, O.M. (1840-1928)**, was educated as an architect and practised for some time, but became known as a promising novelist in 1871 with his story *Desperate Remedies*. In 1874 his *Far from the Madding Crowd* was published, which at once made him a name. Following that, at short intervals, came a long series of powerful novels from his pen. Perhaps the most notable of his stories are *The Trumpet Major*, *The Mayor of Casterbridge*, *Tess of the D'Urbervilles*, and *Jude the Obscure*. In 1908 he completed a dramatic poem entitled *The Dynasts*, whose central figure is Napoleon.

**Hargreaves, James (1720-1778)**, was a poor Lancashire-born mechanic who invented the spinning jenny, one of the revolutionising labour-saving contrivances of the latter half of the 18th century. It met with much opposition, however, and kept him poor, though the community afterwards reaped the advantage in a greatly improved industry.

**Harkness, Edward Stephen, B.A., M.A., LL.D. (1874-1940)**, was a banker and one of America's greatest philanthropists. Donor of the Pilgrim's Prize of £2,000,000 to Great Britain; founded in 1930 the Pilgrim Trust in appreciation of Great Britain's acceptance of financial burdens in the Great War of 1914-18.

**Harley, Robert, 1st Earl of Oxford, K.G., P.C. (1661-1724)**, a distinguished Tory statesman—originally, however, a Whig—of the Queen Anne period, who fell into disgrace after that Sovereign's death in consequence of being suspected of intriguing with the Stuarts. He served at different times as Speaker of the House of Commons, Chancellor of the Exchequer, and Lord Treasurer. "The Harleian Collection" in the British Museum is a reminder of his cultured literary tastes.

**Harold II. (1022-1066)**, the last of the Saxon Sovereigns of England, and the son of Earl Godwin, was crowned King in succession to Edward the Confessor in 1066. The coming of William the Conqueror, with his great army, soon, however, put an end to the hopes of Harold and his followers; and the Battle of Hastings terminated at once his life and Saxon sway in this country.

**Haroun-Al-Raschid (763-809)**, the famous Caliph of Bagdad, familiar to all by the references to him in the *Arabian Nights*—a wise and powerful ruler.

**Harriman, William Averell (b. 1891)**, adviser to Pres. Truman on defence and foreign policy and special representative in Europe of U.S. Government in connection first with the Marshall Plan and later with the Mutual Security Agency, 1948-52.

**Harris, Marshal of the R.A.F. Sir Arthur Travers, Bt., G.C.B., O.B.E., A.F.C. (b. 1892)**, head of Bomber Command, 1942-45.

**Harris, Joel Chandler (1848-1908)**, American journalist and author, famous as the creator of "Uncle Remus." The negro humour of his stories brought him world-wide popularity among adults and children alike. His Brer Rabbit in the Uncle Remus negro folk-tales was the forerunner of Mickey Mouse, impudently victorious in every contest against fearful adversaries.

**Harrison, Frederic (1831-1923)**, as leader of the English Philoivists, filled a prominent part in philosophical discussions during the last quarter

- of the 19th century. In 1907 he published *The Creed of a Layman* and *The Philosophy of Common Sense*, and in 1908 *Realities and Ideals*.
- Harrison, John** (1698-1776), the inventor of the chronometer, for which he received the Government grant of £20,000, was a mechanic of great ingenuity, who effected many important improvements in clocks, watches, and other instruments. In 1715 he made an 8-day clock with wooden wheels, which is still working in the Science Museum, South Kensington.
- Harte, Francis Bret** (1839-1902), the American poet and author, who leapt into popularity in the late 'sixties by his clever sketches and stories of Californian mining life.
- Harty, Sir (Herbert) Hamilton, Mus. Doc.** (1880-1941), was a well-known British composer and conductor. Conductor of Hallé Orchestra 1920-33; Musical Adviser and Conductor-in-Chief of London Symphony Orchestra 1932-41.
- Harvey, William** (1578-1657), an English doctor and scientist who rose to great eminence both as an anatomist and physiologist, and became Physician Extraordinary to James I. He immortalised himself by discovering the circulation of the blood in 1616.
- Hastings, Sir Patrick, Q.C.** (1880-1952), lawyer, politician, and playwright. Attorney-General in first Labour Government, 1924. Author of *The Blind Goddess*.
- Hastings, Warren** (1732-1818), at the age of seventeen went out to Bengal and took a position as writer in the East India Company's service. Subsequently volunteered under Clive, and a year or two later became a Member of the Council at Calcutta. Manifesting great ability, he was advanced from post to post, and in 1773 became the first Governor-General of India. After twelve years of Governor Generalship he returned to England, and was impeached on charges of excessive cruelty and corruption. The trial lasted seven years, and cost Hastings £76,000. He was ultimately acquitted, and the East India Company settled an annuity of £4,000 upon him, and he lived to see his plans for the security of British rule in the Orient publicly applauded.
- Hauptmann, Gerhart** (1862-1946), one of the leading dramatic poets of Europe. Born in Silesia, he devoted himself first to agriculture, then to art, and subsequently to the drama, and lived in Rome, Berlin, Switzerland, and the United States. Produced many plays, including *The Weavers*. Winner of the Nobel Prize for Literature, 1912.
- Havelock, Major-Gen. Sir Henry, K.C.B.** (1795-1857), one of the heroes of the Indian Mutiny, who led the troops to the relief of Cawnpore and Lucknow.
- Hawke, Edward, 1st Baron, K.C.B.** (1705-1781), one of the great admirals of the 18th century. He won a brilliant victory over the French fleet at Quiberon in 1759 in a tremendous storm.
- Hawkins, Sir Anthony Hope** (1863-1933), a popular novelist and playwright. Amongst his best-known works were *The Prisoner of Zenda*, *The Dolly Dialogues*, and *Rupert of Hentzau*.
- Hawkins, Sir John** (1532-1595), a brilliant naval officer of the Elizabethan period, who did much sea fighting in many climes, and served as vice-admiral in the expedition against the Spanish Armada, for which he was knighted.
- Hawthorne, Nathaniel** (1804-1864), one of the most distinguished novelists that America has produced. *The Scarlet Letter* and *The Blithedale Romance* are his greatest novels.
- Haydn, Franz Joseph** (1732-1809), an Austrian musical composer whose oratorio *The Creation* ranks with the *Messiah* of Handel. It was composed in his 64th year, and two years later still he composed *The Seasons*, perhaps the most characteristic of all his works. He was for thirty years chapel-master to Prince Esterhazy, and wrote 125 orchestral symphonies.
- Hazlitt, William** (1778-1830), one of the most admired of our essayists and critics. His *Characters of Shakespeare's Plays* and his published lectures on the poets and dramatists, besides his *Table Talks*, are still widely read. His son William (1811-1893) was also of literary tastes, though he became Senior Registrar in the Bankruptcy Court; and the son of the latter, William Carew Hazlitt (1834-1913), though originally a civil engineer, entered largely into journalism and authorship, and acquired celebrity as a bibliographer and numismatist, writing and editing many books.
- Healy, Timothy Michael, K.C.** (1855-1931), Governor-General, Irish Free State, Dec. 1922-28, a prominent Irish M.P. from 1880, who sat successively for Wexford, Monaghan, Londonderry, Longford, Louth and Cork. Was a prominent Land Leaguer, and was imprisoned for a fiery speech in 1882.
- Hearst, William Randolph** (1863-1951), American newspaper proprietor who began by editing the *San Francisco Examiner* in 1887, and was until 1938 head of the largest newspaper firm in the world.
- Hedin, Dr. Sven Anders, Hon. K.C.I.E.** (1865-1952), a Swedish traveller who made discoveries in Central Asia, and wrote extensively thereon.
- Hegel, Georg Wilhelm Friedrich** (1770-1831), a famous German philosopher and professor who taught that truth or reality has three aspects revealing itself in dialectical development (Thesis, Antithesis, Synthesis) and identified reality with rationalism. He wrote many important works, among which are *The Phenomenology of the Spirit*, *The Science of Logic*, *Philosophy of Right*.
- Heidenstam, Carl Gustaf Werner von** (1859-1940), Swedish author and one of the most brilliant and outstanding figures in Swedish literature. Received Nobel Prize for Literature, 1916.
- Heifetz, Jascha** (b. 1901), Russian-born violinist who became a naturalised American. Studied with Auer in St. Petersburg. Was the first musician to win a reputation in England by gramophone records before his first personal appearance there. Is skilled in technique and a fine interpretative artist.
- Heine, Heinrich** (c. 1797-1856), the German lyric poet, who lived for the best part of his life in Paris, and produced from time to time poems of profound beauty and subtlety of thought. Cynical, satirical, and often bitter, many of his writings excited great conflict of opinion, and showed intense emotional power.
- Helmholtz, Hermann Ludwig Ferdinand von** (1821-94), the great German physicist and physiologist, immortalised by the Young-Helmholtz theory of the nature of light. He also did important work in the fields of conservation of energy, hydro-dynamics, electro-dynamics, meteorological physics and optics.
- Helmont, Jan Baptista van** (1577-1644), Belgian chemist who devoted himself to the study of gases. His chief work is *Ortus medicinarum* (1648).
- Héloise** (c. 1101-64), niece of Canon Fulbert of Notre Dame. Famed for her romantic attachment to Abelard. (See Abelard.)
- Helpmann, Robert Murray** (b. 1909), Australian-born actor, ballet dancer, and choreographer. Became premier danseur, Sadler's Wells Ballet, 1933, and has appeared in several films, including *Henry V* and *The Red Shoes*.
- Hemingway, Ernest** (b. 1898), American novelist and author of the three celebrated novels, *A Farewell to Arms*, *Death in the Afternoon*, and *For Whom the Bell Tolls*. Nobel Prize 1954.
- Hempel, Frieda** (b. 1885), German singer. Made her début in Opera in 1905 at Berlin Opera House, to which she was attached as leading Coloratura soprano. American and British critics have acclaimed her as the greatest exponent of soprano rôles in Mozart and the Italian operas. Has given numerous Jenny Lind concerts.
- Heuderson, Rt. Hon. Arthur**, (1863-1935), President of World Disarmament Conference, 1932-35; Leader of the Labour Party, 1931-32; Foreign Secretary, 1929-31; Home Secretary, 1924. Awarded the 1934 Nobel Peace Prize.
- Henley, William Ernest** (1849-1903), English poet and journalist, a close friend of R. L. Stevenson. Was Editor of the *Scots Observer* in 1889, and later the *National Observer*, in which he first published the *Barrack-Room Ballads* of Kipling, with whose work his own has much in common.
- Henrietta Maria** (1609-1669), the daughter of Henry IV. of France and wife of Charles I.
- Henry I.** (1068-1135), youngest son of William the Conqueror, came to the throne in 1100 during the absence of his elder brother Robert on

Crusade, and later had to fight and imprison the latter. He was an able administrator and a strong ruler to whom, with his grandson Henry II, we owe in a great measure the establishment of the Common Law system and many permanent administrative reforms.

**Henry II.** (1133-1189) was King of England from 1154 to 1189. He had serious conflicts with the Church, which were not rendered less acute by the assassination of Thomas à Becket. The story of *Fair Rosamond* is connected with this monarch.

**Henry III.** (1207-1272), King of England from 1216 to 1272. Was at war with his barons for the greater part of his reign, and incurred much unpopularity by his reckless living and patronage of foreign favourites.

**Henry IV.** (1367-1413), reigned from 1399 to 1413. The son of John o' Gaunt, he succeeded his father in the Duchy of Lancaster in 1399, and later captured and imprisoned Richard II., who was deposed by Parliament and the crown given to Bolingbroke as the grandson of Edward III. Henry IV. thus became the first of England's Lancastrian Kings.

**Henry IV. of France** (Henry of Navarre) (1553-1610), prior to becoming king was the leader of the French Huguenots, and although going over to the Catholics on being crowned, remained in sympathy with the Protestants and protected them by the famous Edict of Nantes. Ravalliac, a religious fanatic, assassinated Henry.

**Henry V.** (1387-1422), reigned from 1413 to 1422, and distinguished himself in the wars with France, the Battle of Agincourt being his greatest triumph. Is said to have been wild and dissolute in his youth, but made an able, energetic and undoubtedly courageous king.

**Henry VI.** (1421-1471), King of England from 1422 to 1461. Succeeding to the throne under a protectorship as a baby nine months old, he had a troubled reign, including a long war with France and loss of French possessions, the Jack Cade Insurrection, and the beginning of the Wars of the Roses, which led to his deposition and the enthronement of Edward IV. by the triumphant Yorkists. Was imprisoned in the Tower, and there found dead one day in 1471. Founder of Eton and of King's College, Cambridge.

**Henry VII.** (1457-1509), the first of the Tudor line, reigned from 1485 to 1509, succeeding Richard III., after defeating and killing him on Bosworth Field. Was very avaricious, yet able, and accumulated vast treasure. He built the Gothic Lady Chapel of Westminster Abbey, and is there buried.

**Henry VIII.** (1491-1547), reigned from 1509 to 1547. A luxury-loving monarch of great diplomatic gifts, and unscrupulous to a degree when his own personal desires were concerned. His quarrels with the Church resulted in the acceptance of the Reformation. His half-dozen matrimonial exploits, his deposition of Wolsey and his suppression of the monasteries are familiar incidents of history. Less known is the foundation of the modern navy with the establishment of the Navy Office in 1540.

**Henry "the Navigator"** (1395-1460), a Portuguese Prince, son of John I. He discovered Madeira and the Azores, and was the chief instrument of the national impetus for navigation.

**Henschel, Sir George,** Mus.D. (1850-1934), English baritone singer, composer and conductor; born in Breslau, he became a naturalised Englishman in 1890. Founder and part conductor of London Symphony Concerts, 1886.

**Henson, Rt. Rev. Herbert Hensley** (1863-1947), Bishop of Durham, 1920-38; Bishop of Hereford, 1917-20; Dean of Durham, 1912-17. A distinguished Churchman, noted for his broad Church ideas and as an exponent of literal theology and advocate of close co-operation with Nonconformists. A formidable controversialist, and was one of the leading advocates of the reformed Prayer Book.

**Hepplewhite, George** (d. 1786). One of the four great English 18th-century cabinet-makers. He was a contemporary of Chippendale, Robert Adam and Sheraton. His name is identified with the style of furniture which followed the Chippendale period.

**Heraclitus** (c. 535-475 B.C.), a Greek philosopher, chiefly famous for his doctrine that everything

is in a state of flux. He regarded fire as the primordial element.

**Herbert, Sir Alan Patrick** (b. 1890), the well-known English author and humorist and writer of comic operas. M.P. for Oxford Univ. 1935-50. As a private member created a personal triumph by introducing and securing the passage of a Bill amending the Divorce Law, July 1937.

**Herbert, George** (1593-1633), the most purely devotional of English poets.

**Hereward the Wake**, the last of the Saxon nobles to hold out against the Normans. Taking refuge in the Fen country, he long defied the Conqueror's forces, but was at last betrayed into the enemy's hands by monks. William afterwards honoured him with a place at Court.

**Herod the Great** (c. 73-4 B.C.), the tyrannical king of Judæa who secured the title from Marc Antony in 37 B.C. This was the Herod who was ruling when Christ was born and who ordered the massacre of the Innocents.

**Herodotus** (c. 485-425 B.C.), the great Greek historian, called by Cicero the father of history. He has also been called the father of anthropology.

**Herrick, Robert** (1591-1674), an English lyric poet, unrivalled in his own field. Author of *Gather ye Rose Buds, Cherry Ripe, Oberon's Feast*, etc.

**Herriot, Edouard** (b. 1872), President of French National Assembly, 1947-54. A much-travelled scholar, Mayor of Lyons for more than a generation, three times Prime Minister, and the recognised spokesman of the Left-Centre party, so long dominant in French politics.

**Herschel, Sir John Frederick William, Bt., F.R.S.** (1792-1871), a celebrated astronomer who did much to extend the power of the telescope.

**Herschel, Sir William, F.R.S.** (1738-1822), great astronomer, father of the last-named, discovered the planet Uranus. His sister, Caroline Lucretia (1750-1848), won attention for her *Index to Flamsteed's Observations of the Fixed Stars and Errata*.

**Hertz, Heinrich** (1857-1894), German physicist who demonstrated the similarity between electric-magnetic light and heat waves, and worked at electric discharges in gases.

**Hertz, the Very Rev. Joseph Herman, C.H.** (1872-1946). Chief Rabbi of the British Empire, 1913-46. Was Rabbi at Johannesburg from 1898 to 1911, and from 1911 to 1913 Rabbi in New York.

**Hertzog, General the Hon. James Barry Munnik** (1866-1942), South African nationalist leader. Prime Minister, 1924-39; Minister of External Affairs, 1929-39.

**Herzl, Theodor** (1860-1904), founded modern political Zionism.

**Hesiod** (flourished c. 735 B.C.), ancient Greek nature poet, author of the poems *Work and Days*, which tells of life in the country, and *Theogony*.

**Hess, Dame Myra, D.B.E.** (b. 1890), English pianist. Made her debut in 1907, and won an immediate success, showing herself to be an interpretative artist of high rank. She excels in the earlier classics, Scarlatti, Bach and Mozart, but is equally admired in her presentation of the romantic composers and her first performances of contemporary pianoforte works.

**Hewart, 1st Viscount, P.C.** (1870-1943), Lord Chief Justice of England, 1922-40.

**Heyworth, Geoffrey, 1st Baron** (b. 1894), British industrialist; Chairman of Unilever Ltd. since 1942. He has served on many industrial, scientific, and educational committees and is Chairman, Court of Governors, Administrative Staff College.

**Hicks, Sir (Edward) Seymour** (1871-1949), a popular London light comedian and dramatic author who married Miss Ellaline Terriss, and played in association with her in many charming productions.

**Hill, Octavia** (1838-1912), a noted pioneer English social reformer who took a practical interest in the housing conditions of the poor, and a pioneer in slum clearance in London. Helped to institute the Charity Organisation Society, and was one of the first women to sit on a Royal Commission.

**Hill, Sir Rowland, K.C.B., F.R.S.** (1795-1879), the first propounder of the idea of the penny postal system, and secretary to the Postmaster-General from 1846 to 1854, after which he was Chief Secretary to the Post Office until 1864. Buried in Westminster Abbey.

**Hindenburg, Field-Marshal Paul von** (1847-1934),

- Was President of the German Reich, 1925-34. He played an important part in the War of 1914-18 and was Chief of the General Staff, 1916-18.
- Hippocrates** (460-357 B.C.) the Father of Medicine. Was a native of Thessaly, and practised and taught in Athens.
- Hirohito**, Emperor of Japan (b. 1901), acceded to the throne Dec. 1926.
- Hitler, Adolf** (1889-1945). Dictator of Germany, 1933-45. Born in Austria, son of Customs official. Worked in Vienna as artisan; already held anti-semitic and anti-marxist views. Came to Munich in 1912; enlisted in Bavarian Infantry at outbreak of first world war. At the end of the war conditions in Germany favoured the growth of a fascist movement and under his personal leadership the National Socialist (Nazi) Party climbed to power. Appointed Reich Chancellor, 1933. On death of Hindenburg in 1934 became Führer. Commander-in-Chief Wehrmacht, 1935. Under the Hitler regime working class movements were ruthlessly destroyed; all opponents—communists, socialists, Jews—were persecuted and murdered. By terrorism and propaganda the German state was welded into a powerful machine for aggression. There followed the occupation of the Rhineland in 1936, the annexation of Austria and Czechoslovakia in 1938 and 1939, the invasion of Poland and declaration of war by Great Britain and France in Sept. 1939, the invasion of Soviet Russia in 1941. Final defeat came in 1945 and on April 30 Hitler is presumed to have committed suicide in the Chancellery as the Russians closed in on Berlin.
- Hobbes, Thomas** (1588-1679), English philosopher who published his most famous work, *Leviathan*, in 1651. He favoured strong Government and therefore supported the supremacy of the State even in religion, but his arguments aroused great antagonism even among the Royalists. He was a child of his age in his enthusiasm for scientific enquiry, and his works provoked fresh thought on many sides.
- Hobbs, Sir John Berry** ("Jack") (b. 1882), first played for Surrey 1905; retired from first-class cricket Feb. 1935. Scored 61,221 runs including 197 centuries.
- Hobhouse, Leonard Trelawney** (1864-1929), English sociologist, who, after a brilliant career at Oxford, joined the staff of the *Manchester Guardian* in 1897, and became in 1908 editor of the *Sociological Review*. His book *The Theory of Knowledge* established his reputation in 1896, and was sustained by *Mind and Evolution*, 1901, and *Morals in Evolution*, 1906. His greatest work was *Development and Purpose*, 1913.
- Ho Chi-minh** (b. 1892), leader of the Viet-minh or "League of Independence," the revolutionary nationalist party of Indo-China. Successfully led the struggle for Viet Nam independence during and after the Second World War.
- Hocking, Silas Kitter** (1856-1935) was a popular novelist, formerly in the Nonconformist ministry; author of countless fascinating stories.
- Hoffman, Paul G.** (b. 1891), from 1948-50 head of the Economic Co-operation Administration set up by the U.S. Government to administer grants under the European Recovery Programme.
- Hogarth, William** (1697-1764), the celebrated engraver and painter who satirised the follies of his time in a series of engravings instinct with character, humour and power. His *Harlot's Progress*, of six engravings, was published in 1734, and gained him immediate fame. In 1735 he produced his equally celebrated *Rake's Progress*, a series of eight engravings. These were followed by numerous others, including *Marriage à la Mode*, *Industry and Idleness*, and *The March to Finchley*.
- Hogben, Prof. Lancelot, D.Sc., F.R.S.** (b. 1895), a noted English scientist who became Regius Professor of Natural History, University of Aberdeen in 1937, after being Prof. of Social Biology in the University of London, 1930-37. Author of *Mathematics for the Million* and *Science for the Citizen*.
- Hogg, James** (1770-1835), a Scottish poet of force and originality.
- Hogg, Quintin** (1845-1903), was an educationist and philanthropist who, purchasing the old Polytechnic Institution in 1882, turned it into a popular college, providing efficient instruction in every department of education at moderate rates.
- Hokusai, Katsushika** (1760-1849), Japanese artist of the Ukiyo-e (popular school), whose work is highly original and of singular beauty and delicacy. He excelled in landscapes.
- Holbein, The Elder** (c. 1460-1524), a famous German painter, father of Hans Holbein.
- Holbein, Hans—The Younger** (1497-1543), was born at Augsburg, and settled in London in 1530, where he won the favour of Henry VIII. for whom he painted many portraits, and produced the famous *Dance of Death*.
- Holden, Charles, F.R.I.B.A.** (b. 1875), English architect, well known as the designer of modern public buildings, including the British Medical Association buildings in the Strand, and was made sole architect for the New London University Buildings on the Bloomsbury site, 1931.
- Holden, Sir Isaac, Bt.** (1807-1897), an inventor and manufacturer who achieved fame and fortune in connection with wool-combing inventions. He was in Parliament from 1865 almost to the time of his death, and was made a baronet in 1892.
- Hölderlin, Johann Christian Friedrich** (1770-1843), friend of Hegel and contemporary of, though unappreciated by, Goethe and Schiller, he is now considered among the very greatest of German poets. His mind became unbending in his middle years and was finally overcome by schizophrenia.
- Holland, Rt. Hon. S. G., C.H.** (b. 1893), New Zealand Conservative leader; Prime Minister since 1949.
- Holmes, Oliver Wendell** (1809-1894), an American doctor and author of great humour and geniality. His *Autocrat of the Breakfast Table*, *The Professor at the Breakfast Table* and *The Poet at the Breakfast Table* are works of infinite humour and quaintness. He was also the author of three novels.
- Holst, Gustav Theodore** (1874-1934), a British composer of Swedish descent whose compositions include *The Planets* suite, *The Hymn of Jesus*, an opera *The Perfect Fool*, and a choral symphony. Professor of Music and Music Master at St. Paul's Girls' School, London, 1905-34. Director of Music at University College, Reading, 1919-23.
- Holyoake, George Jacob** (1817-1906), an eminent secularist lecturer and author, who was identified with many popular movements, especially Co-operation, of which he was the historian.
- Homer** (c. 850 B.C.), the most famous of all epic poets. Is supposed to have been a Greek who lived probably at Chios or Smyrna, and has generally been regarded as the author of the *Iliad* and the *Odyssey*, though tradition rather than ascertained fact connects his name with those great poems.
- Hood, Samuel, 1st Viscount Hood of Whitley, G.C.B.** (1724-1816), a successful British admiral, who in 1793 was in command of the Mediterranean fleet, and showed great capacity in that post, taking and occupying Toulon, and capturing Corsica among other exploits.
- Hood, Thomas** (1799-1845), an English poet, who, as a prolific writer of serious as well as humorous poems, stands in his own line unique. Of his serious verse, *The Song of the Shirt*, *The Dream of Eugene Aram* and *The Bridge of Sighs* may be cited as the best examples, while his comic poems, notably those of the punning order, are unequalled.
- Hooker, Richard** (1554-1600), was Master of the Temple from 1585-91, and afterwards Rector of Boscombe. Is famed for his great book on *Ecclesiastical Polity*, and because of his exquisite choice of words, was known as "Judicious Hooker."
- Hoover, Herbert Clark** (b. 1874), U.S. President 1929-33; Director of Relief Administration in Europe in the period immediately following the War. Author of the "Hoover" Plan for postponing payment of German Reparations 1931.
- Hopkins, Sir Frederick Gowland, O.M., F.R.S.** (1861-1947), an eminent English bio-chemist, noted for his important work on proteins and vitamins. In 1929 was awarded the Nobel Prize in Medicine for his discovery of Vitamin D. Pres. of the Royal Society 1931-36, and of the British Association, 1933.
- Hopkins, Harry** (1890-1946). Franklin Roosevelt's personal assistant. Particularly assisted the President at the important war-time foreign

- conferences, as his personal representative abroad, in working out the New Deal, and in the administration of Lend-Lease.
- Hopkinson, John, D.Sc., F.R.S. (1849-98)**, English engineer and physicist. Senior Wrangler and Fellow at Cambridge. Studied engineering in his father's works, and set up as a consultative engineer. Specialised in electrical work, and by developing the theory of alternating current and of the magnetic current in dynamos he paved the way to the common use of electricity in daily life. Was Professor of Electrical Engineering at King's College, London, 1890-98.
- Hoppner, John, R.A. (1758-1810)**, English portrait painter. Was born in Whitechapel of German parents, and studied at the Academy Schools, winning great distinction. Painted portraits of many members of the Royal Family.
- Horace**, or more properly **Flaccus Quintus Horatius (65-8 B.C.)**, the famous Roman satirist and poet, who was the friend of Virgil, and attained immortal fame by his *Satires*, *Epodes*, and *Odes*.
- Horner, Arthur (b. 1894)**, general secretary of the National Union of Mineworkers since 1946 and a leading British Communist.
- Horniman, Annie Elizabeth Fredericks, C.H. (1860-1937)**, English theatre manager and founder of the repertory system in England. Opened the Gaiety Theatre, Manchester, for repertory work, in 1908. Was a daughter of F. J. Horniman, the traveller and collector, who founded the Horniman Museum in Forest Hill and presented it to the L.C.C. in 1901.
- Horsbrugh, Rt. Hon. Florence, G.B.E., Min. of Education in Conservative Ministry, 1951-54.**
- Houdini, Harry (1873-1926)**, the famous American entertainer, who was a locksmith, but went on the variety stage as an expert in escaping from handcuffs, locked chambers, etc. A keen student of psychic manifestations, and in his day was one of the world's greatest illusionists.
- Housman, Laurence (b. 1865)** English author, artist and playwright. His brother **Alfred Edward (1859-1936)** was also a poet of distinction and a classical scholar, and was the author of *A Shropshire Lad*.
- Howard, John (1726-1790)**, earned celebrity for his philanthropic efforts on behalf of prison reform, the pursuit of which eventually exposed him to a fatal fever attack in Russia.
- Howard of Effingham, Lord (1536-1624)**, commander of the fleet which defeated the Spanish Armada, 1588, and took part in the capture of Cadiz, 1596.
- Howe, Elias (1819-1867)**, an ingenious American who was the inventor of the first sewing machine, by which he made a great fortune.
- Howe, Julia Ward (1819-1910)**, American philanthropist and poetess, famous as the authoress of the *Battle Hymn of the Republic* (1861), a leader of the American Suffragette movement, and the first woman to be elected to the American Academy of Arts and Letters.
- Howe, Richard, 1st (and last) Earl (of first creation), K.G. (1726-1799)**, the British admiral who in 1758 destroyed Cherbourg and in 1794 won the famous victory over the French off Brest.
- Howells, William Dean (1837-1920)**, American novelist and author.
- Hubble, Edwin Powell, B.Sc., Ph.D. (1889-1953)**, U.S. astronomer at Mount Wilson Observatory from 1919 until his death. Noted for his work on extragalactic nebulae. With the aid of the 200-in. telescope at Mount Palomar he made important discoveries.
- Hudson, Henry (c. 1550-1611)**, was a famous English navigator who discovered the Hudson River, Hudson Strait and Bay, and his two books describing his voyages are of the greatest interest.
- Hudson, William Henry (1841-1922)**, English author and naturalist, who spent his early years in South America, memories of which influenced much of his work. His books include *The Purple Land* (1885), *Green Mansions* (1904), *Afoot in England* (1909) and *British Birds* (1895). The Hyde Park Bird Sanctuary (opened in 1925) was established in his memory, and contains the famous figure of *Rima* by Epstein.
- Huggins, Sir William, O.M., K.C.B., F.R.S. (1824-1910)**, British astronomer who pioneered in spectroscopic photography. Collaborated with his wife, **Margaret Lindsay Murray (1848-1915)**, who was also an able astronomer.
- Hughes, Charles Evans (1862-1943)**, American jurist and statesman. Governor of New York State, 1907-8 and 1909-10. Chief Justice of the United States from 1930 after being a Judge of the Permanent Court of International Justice from 1926-28. Judge of the Supreme Court, 1910-16, when he was the Republican candidate for the Presidency, being narrowly defeated by President Wilson. A leading figure at the Washington Disarmament Conference, 1921.
- Hughes, Thomas (1822-1896)**, educated at Rugby and at Oxford; practised at the Bar, and became a County Court Judge in 1882. His best-known work is *Tom Brown's Schooldays*.
- Hughes, Rt. Hon. William Morris, C.H., Q.C. (1864-1952)**, Australian elder statesman, a Welshman by birth, was Prime Minister from 1915 to 1923; represented his country at Versailles, and held many other Cabinet posts.
- Hugo, Victor Marie (1802-1885)**, the great poet, dramatist and novelist who headed the Romantic movement in France in the early part of the 19th century and made himself a name of the first eminence by his various writings. His dramas of *Hernani*, *Lucrece Borgia*, *Ruy Blas*, and *Le Roi s'amuse* were in every sense great triumphs. Among his novels, *Notre Dame* belongs to his early period, and *Les Misérables*, *Les Travailleurs de la mer*, and *L'Homme qui rit*, belong to his later life, written while he was living in exile.
- Hull, Cordell (1871-1955)**, U.S. Sec. of State, 1933-44. Awarded the Nobel Peace Prize, 1945.
- Humboldt, Baron Friedrich Heinrich Alexander von (1769-1859)**, the great German traveller and naturalist; his books describing his travels and scientific discoveries—especially in geology and natural history—are most attractive.
- Hume, David (1711-1776)**, the celebrated historian and philosopher whose *History of England* is a fascinating and comprehensive study, and long held the chief place in English historical literature. Hume's philosophical writings were no less famous and widened the sphere of philosophical thought.
- Hunt, Brig. Sir (Henry Cecil) John, Kt., C.B.E., D.S.O. (b. 1910)**, soldier and mountaineer; leader of the 1953 British Mount Everest Expedition. E. P. Hillary and the Sherpa Tenzing, who formed the second assault party, reached the summit (29,002 ft.) on May 29, 1953. The story of the climb is told in his book *The Ascent of Everest*. See also "Everest Expeditions," Gen. Inf.
- Hunt, (James Henry) Leigh (1784-1859)**, an English poet, politician and essayist. In 1813 he was fined £500, and sentenced to two years' imprisonment for libelling the Prince Regent, and while in prison wrote his poem, *The Story of Rimini*, and other works. In later life he was a constant contributor to literature, and from 1847 enjoyed a pension of £200 a year from the Civil List.
- Hunt, Wm. Holman, O.M. (1827-1910)**, one of the three founders of the Pre-Raphaelite movement, and an artist who achieved distinction by several remarkable paintings, the chief of which is, perhaps, *The Light of the World*, an allegorical work.
- Hunter, the brothers William, F.R.S. (1718-83) and John, F.R.S. (1728-93)**, were both famous Scottish physicians. William had remarkable success as a lecturer and obstetrician. His valuable anatomical collection was bequeathed to the Univ. of Glasgow. John showed real genius for anatomy, became one of the greatest surgeons of his day and made many discoveries. His surgical museum forms part of the Museum of the Royal College of Surgeons.
- Huss, or Hus, John (1369-1415)**, the Bohemian religious reformer, was strongly influenced by Wyclif and himself urged reform both of abuses in the church and of doctrine. Sentenced to death or recantation he suffered martyrdom on July 6, 1415. His death caused a civil war which lasted for many years.
- Hutton, James, M.D. (1726-97)**, an Edinburgh doctor whose geological researches established the fundamental principles of modern geology. Before his time geology did not exist as a science, all was speculation. He drew his evidence from the rocks themselves, and his *Theory of the Earth* is one of the great classics of science.
- Huxley, Aldous (Leonard) (b. 1894)**, noted modern writer, grandson of T. H. Huxley and brother of

Julian; author of *Crome Yellow*, *Jesting Pilate*, *Brave New World*, *Point Counter Point*, *Ends and Means*, *Grey Eminence*, *The Perennial Philosophy*, etc.

**Huxley**, Prof. Julian Sorrell, M.A., F.R.S. (b. 1887), biologist and writer; grandson of T. H. Huxley, son of late Leonard Huxley; Director-General of the United Nations Educational, Scientific and Cultural Organisation 1946-48. Secy. of Zoological Soc. of London 1935-42.

**Huxley**, Prof. the Rt. Hon. Thomas Henry, F.R.S. (1825-1895) an eminent scientist and author of numerous works covering a great range of research. After the publication of Darwin's *Origin of Species*, Huxley became an ardent evolutionist. His biological work, *Man's Place in Nature*, and his numerous essays were marked by great vigour and clearness of thought, and gave him a leading position. He held numerous important appointments, was President of the Royal Society in 1883, and belonged to many learned societies.

**Hyde**, Dr. Douglas (1860-1949), the distinguished Irish scholar, historian, poet and folk-lorist. President of Eire, 1938-45.

**Hypatia**, who lived in the 4th century, was daughter of Theon of Alexandria, and attained great eminence by her lectures on philosophy. She excited the enmity of the monks, who raised an agitation against her, and she was put to death.

**Hyndman**, Henry Mayers (1842-1921), the founder of the Social Democratic Federation, 1881, and of the newspaper *Justice*; an active propagandist and worker in the socialist cause in many lands and friend of Mazzini and Garibaldi. In 1911 published his *Record of an Adventurous Life*.

## I

**Ibanez**, Vicente Blasco. (See Blasco-Ibanez, Vicente.)

**Ibrahim Pasha** (1789-1848), an able Egyptian statesman, general, and Viceroy, who, adopted by Mohammed Ali as his son, contributed largely to the success of Egyptian policy during the quarter of a century or more of his influence. His conquest of Syria was a notable feat of generalship. He died a few months after being appointed Viceroy.

**Ibsen**, Henrik Johan (1828-1906), the Norwegian playwright and poet, moralist, and humanist, whose plays, though arousing considerable opposition at the time, are acknowledged as the work of one of the world's greatest dramatists. A master of technique, charging every detail with significance, fusing the comic with the tragic, Ibsen revolutionised the European theatre. His chief works are *Ghosts*, *The Master Builder*, *The Wild Duck*, *A Doll's House*, *Hedda Gabler* and the poetic drama *Peer Gynt*.

**Inge**, Very Rev. William Ralph, K.C.V.O., D.D. (1860-1954), English divine; Dean of St. Paul's, 1911-34; Assistant Master at Eton, 1884-88; Lady Margaret Prof. Camb., 1907-11. Earned the sobriquet "the gloomy Dean" for his incisive and somewhat pessimistic comments on contemporary affairs. His books include a number on mysticism.

**Ingersoll**, Robert Green (1833-99), American lawyer, writer, and lecturer, became known by reason of his lectures directed principally against Christianity.

**Ingres**, Jean Auguste Dominique (1780-1867), a great French historical painter who was elected to the Institute in 1824, and at his death was a Senator of France.

**Innocent III.** (1160-1216), Pope from 1198, successfully asserted the power of the papacy over such secular princes as the emperor, Philip II. of France, and John of England. He promoted the 4th Crusade, initiated the crusade against the Albigensian heretics, and held the 4th Lateran Council. His pontificate marks the zenith of the medieval papacy.

**İnönü**, General İsmet (b. 1884), President of Turkey 1938-50. Was Minister for Foreign Affairs and Prime Minister in 1923; Prime Minister 1924-27 and 1927-37.

**Ireland**, John, Hon. D.Mus. (b. 1879), English composer, best known for his setting of Masefield's *Sea Fever*, his chamber music, his 'cello and pianoforte sonata, and especially sonata for pianoforte and violin.

**Irving**, Sir Henry (1838-1905), a great English actor. His first appearance in London was made in 1866, and his first distinct success was his Digby Grant in *Two Roses*. From 1871 he was connected with the Lyceum Theatre, first with Mr. Bateman, and from 1878 under his own management. His record at this theatre covered a brilliant series of productions, *The Bells* was the first triumph, then followed *Charles I.* and *Eugene Aram*, and later a number of Shakespearian impersonations, in some of which, notably Shylock and Hamlet, Irving was really great. Among the original productions credited to him may be mentioned Tennyson's *Queen Mary* and *Becket*, *Ravenswood*, *Olivia*, *King Arthur*, and *Robespierre*.

**Irving**, Washington (1783-1859), a writer of charming stories and miscellaneous works which won wide and well-deserved favour on both sides of the Atlantic. Among his biographical books may be mentioned *Lives of Goldsmith*, *Columbus*, *Mohammed* and *Washington*.

**Isaacs**, Rt. Hon. Sir Isaac Alfred, G.C.B., G.C.M.G. (1855-1948), Gov.-Gen. of Australia, 1931-36, being the first native-born Australian to occupy that position; Chief Justice of the High Court of Australia, 1930-31; a Judge of the High Court of Australia, 1906-30.

**Isabella of Castile** (1451-1504), reigned jointly with Ferdinand V., her husband. During their thirty years' sway Spain was united as a single monarchy, and achieved the height of its greatness, the discovery of America, the conquest of Granada, and the expulsion of the Moors from Spain being among the events of her reign.

**Ismail Pasha** (1830-95), grandson of Mohammed Ali, was a man of modern ideas and great public spirit, whose policy rendered Egypt practically independent of Turkey, the Sultan confirming him in the position and title of Khedive in 1873. It was his adoption of the idea of the Suez Canal that enabled that work to be successfully carried out. By reckless extravagance he involved himself in difficulties, entailing the sale of his Suez Canal shares to England, the establishment of the dual control of England and France, and his own abdication in 1879, when his son Tewfik succeeded.

**Ismay**, 1st. Baron, Gen. Hastings Lionel, P.C., G.C.B., C.H., D.S.O. (b. 1887), distinguished soldier who played important part in higher direction of the last war. Chief of Staff to Lord Mountbatten when Viceroy of India. Resigned as Sec. of State for Commonwealth Relations in 1952 to become Sec. Gen. of NATO.

**Israels**, Joseph (1824-1911), outstanding Dutch genre painter of the 19th century.

**Ito**, Hirobumi, Prince (1841-1909), one of the most enlightened statesmen of Japan. The unparalleled social metamorphosis which Japan underwent in the latter half of the nineteenth century owed much to his guidance and influence. Was four times Premier.

**Ivan the Great** (1440-1505), succeeded in bringing the scattered provinces of Muscovy under one supreme governmental control, and put an end to Tartar rule.

**Ivan the Terrible** (1530-84), crowned as first Czar of Russia in 1547, was a strong and autocratic ruler. He furthered internal consolidation and Russian eastward expansion and entered into trading relations with Queen Elizabeth.

**Iveagh**, 1st Earl of (Edward Cecil Guinness), K.P., G.C.V.O., F.R.S. (1847-1927), a member of the well-known Guinness family of Dublin brewers. Celebrated the visit of Edward VII. to Ireland in 1903 by giving £50,000 to Irish hospitals. Chancellor Dublin University, 1908. Left Ken Wood House collection of works of art to the nation.

**Ives**, Frederic Eugene (1856-1937), American inventor, who in 1878 invented a half-tone photo-engraving process from which he evolved in 1886 the process now generally employed. He also invented the three-colour process of colour printing, which revolutionised the art-printing industry.

## J

**Jacks**, Lawrence Pearsall (1860-1955). Principal of Manchester College, Oxford, 1915-31, and Professor of Philosophy in that College, 1903-31. Entered ministry in 1887 as assistant to the Rev. Stopford Brooke. Editor of the *Hibbert*

- Journal*, 1902-47, and author of several books of religious studies.
- Jackson, Andrew** (1767-1845), and American general who was twice President of the United States.
- Jackson, Thomas Jonathan** (1824-1863), popularly known as "Stonewall Jackson," was the most brilliant general on the Southern side in the American Civil War. Was accidentally killed at the Battle of Chancellorsville. The term "Stonewall" refers to his dogged resistance at the first Battle of Bull Run.
- Jacobs, William Wymark** (1863-1943), was a novelist of quaint and peculiar humour, whose stories and sketches of East End riverside life are inimitable.
- Jacquard, Joseph Marie** (1752-1834), a French mechanic whose Jacquard loom provided a new and effective method of weaving designs in textile fabrics, and was an invention of the very first rank.
- Jagellons, Lithuanian-Polish dynasty, ruled in Poland 1386-1572.**
- James I. of England** (1566-1625) was the son of Mary Stuart. He succeeded to the English throne in 1603 on the death of Elizabeth. Numerous plots were formed against him, including the Gunpowder Plot of 1605. He persecuted the Puritans, granted many monopolies, and saw the Authorised Version of the Bible published. Described by Henri IV of France as "the wisest fool in Christendom."
- James II. (1633-1701)**, as Duke of York, was Lord High Admiral in the Second and Third Dutch Wars, during which New Amsterdam fell to England and was renamed New York. As a Roman Catholic he resigned his office after the Test Act of 1673, was nearly excluded from the Succession, and, when he came to the throne in 1685, aroused and united strong opposition by his attempts to obtain better conditions for his co-religionists. The unsuccessful Monmouth Rebellion, the Bloody Assize, the Declarations of Indulgence, and the Seven Bishops' Trial marked a reign which ended in the flight of the king and the Revolution Settlement of 1689.
- James, Henry, O.M.** (1843-1916), an Anglo-American novelist and younger brother of William James. Produced a number of notable stories, remarkable for their intellectual subtlety and careful characterisations. For the last thirty years of his life he resided mostly in London. His best-known novels are *The American*, *Daisy Miller*, *The Bostonian*, *The Portrait of a Lady* and *What Maisie Saw*. In 1906 he revisited his native land, and wrote *The American Scene* (1907). Later he published *Finer Grain*. Was a great admirer of R. L. Stevenson. Became a British subject 1915.
- James, William** (1842-1910), the great American psychologist and philosopher, brother of Henry James, the novelist. He became Prof. of Philosophy at Harvard University, 1882, and was the founder of the philosophical system known as pragmatism. His first important work, *Principles of Psychology*, 1890, stamped him as one of the most lucid, penetrating and engaging writers of his day, and established him as the foremost protagonist of the physical school in psychology. *Pragmatism*, a new name for some old ways of thinking, appeared in 1907, and established him as a speculative philosopher of a high order.
- Jameson, Rt. Hon. Sir Leander Starr, Bt., M.D.** (1853-1917), the South African statesman, was a close friend of Cecil Rhodes. After serving for several years as administrator of Rhodesia, in December 1895 he led the ill-starred raid into the Transvaal in support of the dissatisfied Uitlanders. He was taken prisoner, handed over to the British and sentenced to fifteen months' imprisonment. After the South African War he served as Prime Minister of Cape Colony from 1904 to 1908.
- Jean, Sir James Hopwood, O.M., F.R.S.** (1877-1946), a brilliant mathematician and astronomer who was a lecturer in mathematics at Cambridge and Princeton and secretary of the Royal Society 1919-29. Author of *The Universe Around Us*, *The Mysterious Universe*, etc.
- Jefferies, Richard** (1848-1887), an English naturalist, who, between 1873 and the time of his death, wrote some of the most beautiful descriptions of natural scenery and the customs and habits of the rural world that we possess. His *Gamekeeper at Home* and *The Life of the Fields* are books of great power and sympathy.
- Jefferson, President Thomas** (1743-1826), took part in the American Revolution, and drew up the Declaration of Independence. Twice U.S. Pres.
- Jeffreys, George, 1st Baron of Wem** (1648-1689), won for himself unenviable notoriety by his harsh and cruel judgments, when he held what is known as the "Bloody Assize." He was made Lord Chancellor, but after the fall of James II. was sent to the Tower and there died.
- Jellicoe, Adml. of the Fleet, Earl, G.C.B., O.M., G.C.V.O.** (1859-1935), Commander-in-Chief of British Fleet, August 1914 to Nov. 1916; and First Sea Lord, Nov. 1916 to Dec. 1917. Gov.-Gen. of New Zealand, 1920-24.
- Jenghiz Khan** (1162-1227), the famous Mongol ruler who twice conquered China, and forced the Turks within European confines.
- Jenner, Edward, M.D., F.R.S.** (1749-1823), an English physician who became celebrated by his discovery of the vaccination system of alleviating smallpox, which has been of such incalculable benefit to mankind. Parliament made him grants amounting to £30,000 which left him still out of pocket.
- Jerome, Jerome Klapka** (1859-1927), a clever journalist and writer, who made his first success with his humorous book, *Three Men in a Boat*. He founded *The Idler*.
- Jerome, St.** (340-420), a noted theologian of the 5th century, whose Latin translation of the Scriptures (*The Vulgate*) made him famous. He died at Bethlehem.
- Jerrold, Douglas William** (1803-1857), dramatist and humorist, who enjoyed a long career of success by his contributions to *Punch* (including *Mrs. Caudle's Curtain Lectures*); his novels, of which *St. Giles* and *St. James* was his best; and his plays, of which *Black-Eyed Susan* was the most popular.
- Jesus Christ** (c. 4 B.C.—A.D. 30 or 33) the founder of Christianity and the greatest figure of human history. The main source of information on His life and work is the New Testament. Jesus was born at Bethlehem in Judea, and was the first-born of His mother Mary. According to Matthew, He was miraculously conceived and Joseph was His foster-father. The family home was at Nazareth in Galilee. Jesus lived at a critical period in Jewish history. He began His three-year mission when He was about thirty. His teaching is summarised in the Sermon on the Mount.
- Jinnah, Mohammed Ali** (1879-1948), Indian statesman. The emergence of a separate Moslem state of Pakistan when the British left India was mainly due to his efforts. He was for many years the active President of the Moslem League, and in 1947 became the first Gov.-Gen. of Pakistan. He was a barrister by profession.
- Joachim, Dr. Joseph** (1831-1907), a German violinist and composer, who has been considered the greatest solo violinist and the greatest quartet leader in living memory. Retained his place of popular favourite in England until his death.
- Joad, Cyril Edwin Mitchinson, M.A., D.Litt.** (1891-1953), Head of Dept. of Philosophy and Psychology, Birkbeck College, University of London, since 1930. Wrote many important and interesting books, pamphlets and articles dealing with numerous controversial questions of social and political life.
- Joan of Arc, St.** (1412-1431), the girl whose heroism inspired the French to drive the English out of Orleans, and enabled Charles to be proclaimed King at Rheims. She was burned as a heretic at Rouen. Canonised at St. Peter's, Rome, 1920.
- Joffre, Marshal Joseph Jacques Césaire, G.C.B., Hon. O.M.** (1852-1931), Commander-in-Chief of the French Armies 1911-17. His handling of his troops during the war was eminently successful. Entered the Army in 1870, and commanded a battery during the siege of Paris.
- John, St., the Baptist** (executed A.D. 28), the forerunner of Christ.
- John, St., the Evangelist**, the son of Zebedee, retired to Patmos after the Crucifixion, but returned from exile to Ephesus later, and there died at a great age, probably circa A.D. 90.

- John**, surnamed "Lackland" (1167-1216), King of England from 1199 to his death at Newark after deposition by the Barons in 1216. One of the most detested of English monarchs, but whose reign stands out large in history because of his having granted, under compulsion, the Magna Carta, England's great bulwark of liberty.
- John of Gaunt** (1340-1399), Duke of Lancaster, son of Edward III. and father of Henry IV., was one of the most powerful English nobles, and was more or less concerned in the leading events of his time. In Wat Tyler's rebellion he had his palace in the Savoy destroyed and was long held in popular hatred.
- John, Augustus Edwin**, O.M., R.A. (b. 1878), outstanding British painter, especially notable for his portraits. Among others, he has painted Lloyd George, Bernard Shaw, and T. E. Lawrence. His works in the Tate Gallery include *The Smiling Woman* and *Galway*.
- Johnson, Amy**, C.B.E. (1904-1941), was the first woman aviator to fly solo from England to Australia, when she made a record flight to India (6 days to Karachi). Lost her life when flying as a pilot of the Air Transport Auxiliary over the Thames Estuary.
- Johnson, Very Rev. Hewlett**, M.A., B.Sc., D.D. (b. 1874), Dean of Canterbury since 1931. Pubs. *The Socialist Sixth of the World*, *Soviet Strength*, *Soviet Success*.
- Johnson, Dr. Samuel** (1709-1784), the great lexicographer and writer, who for a number of years was the most prominent literary man in England. His *Dictionary* was published in 1755, before which he had attained eminence by several works including the *Vanity of Human Wishes*. His *Rasselas* appeared in 1759, and for two years he published *The Idler*, a collection of essays after the style of the *Spectator*. His *Lives of the Poets* appeared in 1781. He was greatly honoured during his life, enjoyed a pension of £300 a year from 1762, at his death was buried in Westminster Abbey, and had the best biography in the language written upon him by James Boswell.
- Johnston, Sir Harry** (Hamilton), G.C.M.G., K.C.B. (1858-1927), was a daring and successful explorer, who led scientific expeditions into the interior of Africa. Helped to crush the Arab slave trade in East Africa and to establish a large British Protectorate north of Lake Tanganyika. Published many valuable works of travel and observation and also a *History of the British Empire in Africa*.
- Jókai, Maurus** (1825-1904), a distinguished Hungarian novelist, many of whose works have been translated into English, among them *A Modern Midas* and *Black Diamonds*.
- Joliot, Jean Frédéric** (b. 1900), French physicist, Chairman of the Permanent Committee of the World Peace Congress and Nobel prizewinner. Was dismissed in 1950 by the French Government from his post as High Commissioner of Atomic Energy because of his communist views. His wife, Mme. Irène Joliot-Curie, also a distinguished scientist, is the daughter of Mme. Curie.
- Jones, Ernest Charles** (1819-69), one of the best-known leaders of the Chartist movement, in 1848 was sentenced to two years' imprisonment for his revolutionary speeches. He was also a political writer and the author of several poems.
- Jones, Sir Harold Spencer**, K.B.E., F.R.S. (b. 1890) Astronomer Royal, 1933-56; from 1923 to 1933 held the post of H.M. Astronomer at the Cape of Good Hope. He is president of the British Horological Institute.
- Jones, Inigo** (1573-1652), a noted architect who became known as "the English Palladio," and built, among other famous structures, the Banqueting Hall at Whitehall and the gateway of St. Mary's at Oxford. He was a Royalist, and suffered severely in the Civil War.
- Jones, John Paul** (1747-1792), was a Scotsman, who early in life took to the sea, and during the American War of Independence commanded various ships on behalf of the Colonists, and was most daring in his onslaughts upon British vessels. He died in Paris.
- Jonson, Ben** (1573-1637), a friend of Shakespeare and one of the great poets and dramatists of his age. Was Poet Laureate from 1619. His best plays are *Every Man in his Humour* and *The Alchemist*. Buried in Westminster Abbey.
- Josephine, Empress** (1763-1814), was the wife of Napoleon I. until he divorced her in 1809 and married Marie Louise. Josephine had previously been married to Vicomte Alexandre Beauharnais, by whom she had two children.
- Josephus, Flavius** (A.D. 38-c. 100), Jewish historian whose *History of the Jewish War* and *Antiquities of the Jews* contained much valuable historical evidence bearing upon Biblical history.
- Joule, James Prescott**, F.R.S. (1818-1889), one of the greatest of English physicists, famous for his researches on electro-magnetism and for his determination of the mechanical equivalent of heat.
- Jowett, Benjamin** (1817-93), English scholar remembered as the greatest Master of Balliol College, winning a great reputation for his sympathy and erudition. His outstanding works include translations of the *Dialogues of Plato* and *History of Thucydides*. His Mastership raised Balliol to a proud pre-eminence among the Colleges.
- Jowitt, William Allen**, Earl, P.C., (b. 1885) Lord High Chancellor, 1945-51; Minister for National Insurance, 1944-45. Minister without Portfolio, 1942-44, M.P. for Preston, 1929-31, and for Ashton-under-Lyne, 1939-45. Solicitor-Gen., 1940-42; Paymaster-General, 1942.
- Joyce, James** (1882-1941), an Irish author who exercised a very great influence on the younger school of novelists, critics and poets, especially by his autobiographical *Portrait of the Artist as a Young Man* and his *Ulysses*.
- Juin, Alphonse**, Marshal of France (b. 1888), C.-in-C. of French troops in N. Africa, 1942; Res.-Gen. in Morocco, 1947; C.-in-C. Allied Forces, Central Europe (NATO), 1951.
- Julian the Apostate** (Flavius Claudius Julianus) (331-363) was Roman Emperor for the last two years of his life, during which period he was an avowed pagan, though previously he had professedly been a Christian. He was slain by an arrow during an expedition against Persia.
- Juliana**, Queen of the Netherlands (b. 1909), only daughter of Princess Wilhelmina (b. 1880), whom she succeeded as Queen in 1948. In 1937 married Prince Bernhard of Lippe-Biesterfeld and has four daughters.
- Julius Cæsar**. (See Cæsar, Caius Julius.)
- Jung, Carl Gustav** (b. 1875), Swiss psychiatrist founder of the Zür School, and a former pupil of Freud (q.v.) until 1911, when he formulated a system of analytical psychology.
- Junot, Andoche**, Duc d'Abrantes (1771-1813), was one of Napoleon's great generals and was brilliantly successful until defeated by Wellington at Vimiera.
- Jusserand, Jean Adrien Antoine Jules** (1855-1932), French author and diplomat, Ambassador to U.S.A., 1902-25. Was a well-known authority on English literature. His works include *The English Theatre from the Conquest to Shakespeare* (1878), *The English Novel* (1886), *The Literary History of the English up to the Renaissance* (1894), and other literary and critical essays.
- Justinian I.** (Flavius Anicius Justinianus) (483-565) was the Roman Emperor of the East whose fame rests chiefly on his laws. His *Corpus Juris Civilis* remained the accepted text-book of Roman Law to the end of the 9th century, and is still the most important of all monuments of jurisprudence. He reigned from 527 to 565.
- Juvenal** (Decimus Junius Juvenalis) (60-140), the famous Roman poet and rhetorician of the age of Trajan. His sixteen celebrated *Satires* are the finest in classical literature.

## K

- Kafka, Franz** (1883-1924), Jewish writer, born in Prague, whose introspective work, the bulk of which was not published till after his early death from tuberculosis, has been widely acclaimed and discussed and has had a notable influence on later schools, including the Surrealists.
- Kālidāsa** (c. A.D. 400), the most illustrious figure in classic Sanskrit literature and one of the greatest Oriental poets. No facts are known about his life and date, but certain evidence places him in the 5th cent. Seven of his works survive: two lyrics, *Ritū-samhara* (The Seasons), and *Megha-dūta* (Cloud Messenger); two epics, *Raghu-vamśa* (Dynasty of Raghu) and *Kumāra-sambhava* (Birth of the War-God); and three dramas, *Sakuntalā*, *Mālavikāgnimitra*, and *Vikramorvaśīya*.

- Kant, Immanuel** (1724-1804) German scientist and philosopher, whose *Critique of Pure Reason*, published in 1781, was the subject of fierce discussion, and involved him in trouble with the Prussian Government as to his religious belief. His speculations and the transcendental theories he worked out revealed a marvellous capacity of mind, and his works were of immense influence in shaping the philosophical thought of the 18th and 19th centuries.
- Kaufmann, Angelica, R.A.** (1741-1807), the famous Anglo-Swiss painter, who was one of the foundation members of the Royal Academy, and the first woman R.A.
- Kaulbach, Wilhelm von** (1805-1874), an eminent German painter who illustrated books by Goethe and Schiller.
- Kean, Charles John** (1811-1868), an English actor-manager, son of the tragedian, Edmund Kean. Charles Kean married Ellen Tree, and in the 'fifties played with her in a remarkable series of spectacular revivals at the Princess's Theatre in London.
- Kean, Edmund** (1787-1833), one of the greatest tragic actors in the history of the British stage.
- Keats, John** (1795-1821), the great English poet who, though dying at the early age of twenty-five, produced a number of poems which in richness of imagination and beauty of thought are not excelled by anything in the language. His *Odes*, his two poems, *Isabella* and *The Eve of St. Agnes*, are exquisite in form and expression.
- Keble, John** (1792-1866), an English clergyman and poet, whose *Christian Year* is one of the most notable works of its class.
- Keene, Charles** (1823-1891), one of the most talented of the *Punch* artists.
- Keith, Sir Arthur, F.R.S.** (1866-1955), an eminent anthropologist. Pres. of British Association, 1927. Author of *The Antiquity of Man*, *Religion of a Darwinist*, *A New Theory of Evolution*.
- Keller, Helen Adams** (b. 1880), American writer, who, as the result of illness, became blind and a deaf-mute at the age of 19 months, but was taught to read, write and speak and was graduated with honours at Radcliffe College, Mass. She has written several books.
- Kellogg, Frank Billings, LL.D.** (1856-1937), was a Judge of the Permanent Court of International Justice, The Hague, 1930-35. American Ambassador to the Court of St. James, 1923-25. Secretary of State, U.S.A., 1925-29; chiefly remembered as the originator of the Kellogg Pact. Awarded Nobel Peace prize, 1929.
- Kelly, Sir Gerald Festus, P.R.A.** (b. 1879), a successful English portrait-painter whose State portraits of King George VI and Queen Elizabeth were exhibited at the R.A. in 1945. President of the Royal Academy, 1949-54.
- Kelvin, William Thomson, Lord, P.C., O.M., G.C.V.O., F.R.S.** (1824-1907), the famous scientist and inventor, introduced the dynamical theory of heat. Shortly afterwards he interested himself in submarine telegraphy, and invented numerous important improvements, also doing splendid work in the direction of electrical invention; he covered a vast field and earned a world-wide reputation.
- Kemble, Frances Anne ("Fanny")** (1809-1893), was a noted actress in the early part of the 19th century. She was the daughter of Charles Kemble (1775-1854), who was also a celebrated actor, associated in many appearances with his brother, John Philip Kemble, and their talented sister, Mrs. Siddons (*q.v.*).
- Kemble, John Philip** (1757-1823) was a famous tragedian, and for many years manager of Drury Lane Theatre in London. He was brother to Mrs. Siddons (*q.v.*), who first played with—and overshadowed—him in 1783.
- Kempenfelt, Admiral Richard** (1718-1782), an English naval officer who saw distinguished service, and sank with his ship the *Royal George* off Spithead, through a shifting of the guns when refitting which caused the vessel to capsize. Some six hundred of the ship's company perished with their admiral.
- Kempis, Thomas a** (1380-1471), name by which the German mystic and writer Thomas Hammerken was known, was a monk of the St. Augustine order, whose life was mainly spent at a monastery near Zwolle. He was the author of *The Imitation of Christ*, a work which has been translated into all languages, and forms a devotional course which is highly valued.
- Kent, William** (1684-1748), a leading figure in British art, 1725 until middle of eighteenth century—architecture, landscape gardening, interior decoration, furniture, and painting. Strong Italianate influence. Surviving works: The Great Hall at Holkham, Norfolk, and lay-out at Rousham, Oxfordshire.
- Kepler, Johann** (1571-1630), renowned German astronomer, assistant to Tycho Brahe (1546-1601), whose measurements he used in working out his laws of planetary motion, which are: 1. The planets describe elliptic orbits, of which the sun is one focus. 2. The line joining a planet to the sun sweeps out equal areas in equal times. 3. The square of the period of revolution of a planet is proportional to the cube of its average distance from the sun. The explanation of these laws was given by Newton.
- Kesselring, Albert** (b. 1885), German general. Commanded the Luftwaffe during the invasion of Poland in 1939 and of the Low Countries in 1940. C-in-C. in Italy from 1943 until he took over from Rundstedt on the Western Front in March 1945.
- Keyes, Admiral of the Fleet, Lord, G.C.B., K.C.V.O., C.M.G., D.S.O.** (1872-1945). Commodore of the submarine service during war of 1914-18, and commanded operations against Zeebrugge in 1918. Deputy Chief of Naval Staff, 1921-25; Com.-in-Chief Mediterranean Station, 1925-28. Director of Combined Operations, 1940-41.
- Keynes, John Maynard, 1st Baron, C.B., M.A., F.B.A.** (1883-1946), British economist of international reputation. Bursar and Fellow of King's College, Cambridge. Editor of *Economic Journal*, 1911-46. Principal British Treasury representative at the Versailles peace conference; resigned in protest against plans for reparations, and published his views in *The Economic Consequences of the Peace* (1919). From 1919 onwards engaged in controversial writing on monetary theory. Against the return to the gold standard in 1925. *Treatise on Money* (1930) and *The General Theory of Employment, Interest and Money* (1936) profoundly influenced economic thought and government policy all over the world. Led the British delegation to Bretton Woods (*see* "Gen. Inf.") and negotiated the American loan agreement of 1945 (*see* "Gen. Inf."). Married Lydia Lopokova, formerly of the Russian Imperial Ballet, in 1925.
- Khrushchev, Nikita S.** (b. 1894), First Secretary of the Soviet Communist Party since 1955, a position formerly held by Stalin.
- Kidd, Captain William** (c. 1645-1701), was a famous pirate who, taking advantage of an appointment to the captaincy of a British ship, engaged in numerous piratical expeditions under cover of the English flag. He was hanged at Execution Dock in London after a sensational trial at the Old Bailey.
- King, Rt. Hon. (William Lyon) Mackenzie, O.M., C.M.G.** (1874-1950), Prime Minister of Canada, 1921-25, 1926-30 and 1935-48.
- Kingsley, Charles** (1819-1875), an English clergyman and novelist, who gained much popularity by his numerous novels including *Hypatia*, *Westward Ho!* and *Hereward the Wake*.
- Kipling, Rudyard** (1865-1936), poet, novelist, and miscellaneous writer. Made himself celebrated while yet a youth by some exceedingly clever and characteristic sketches of Indian life written for the most part while performing journalistic duties in India. He subsequently settled in London and produced a remarkable succession of stories, sketches, ballads, and poems, all marked by intense vigour. In 1907 was awarded the Nobel prize.
- Kirchhoff, Gustav Robert** (1824-87), German physicist, improved Wheatstone's Bridge, and proved that electricity in a wire flows as fast as light in free space. He put spectrum analysis on a firm basis, and published, among other scientific works, *Researches on the Solar Spectrum*.
- Kitchener, of Khartoum, Field Marshal Earl, K.G., K.P., G.C.B., O.M.** (1850-1916), was a brilliant soldier. By his victory at Omdurman in 1898 he crushed the Sudanese dervishes and avenged General Gordon. In the early stages of the South African War he assisted Lord

- Roberts and took over command himself in 1900. Was C-in-C., India, 1902-9. On the outbreak of war with Germany (Aug. 1914) was made Secretary for War, and his splendid work in building up the army won universal admiration. Drowned June 5, 1916, by the torpedoing of the *Hampshire* while on his way to Russia.
- Klee, Paul** (1879-1940), Swiss artist, studied at Munich, Paris and Rome and later became Professor at Düsseldorf Academy. He lived in a restless, experimental period. His paintings are small-scale, delicate dream-world fantasies, full of poetical content.
- Kneller, Sir Godfrey, Bt.** (1646-1723), the most celebrated portrait painter of his day in England, who enjoyed the patronage in succession of Charles II., James II., William III., Anne, and George I. He painted the portraits of the members of the Kit-Cat Club, and was buried in Westminster Abbey.
- Knight, Dame Laura, D.B.E., R.A., R.W.S., R.E.**, a prominent British painter. Pres. of Socy. of Women Artists, 1931. Her husband, Harold Knight, R.A. (b. 1874), is a distinguished portrait-painter.
- Knox, John** (1505-1572), the famous divine and Reformer, who stirred Scotland to mighty religious impulses in the reign of Mary Queen of Scots.
- Knox, Edmund George Valpy** ("Evoc") (b. 1881), editor of *Punch*, 1932-48.
- Knox, Rt. Rev. Mgr. Ronald Arbuthnot** (b. 1888), Catholic Chaplain at the University of Oxford 1926-39, is also a well-known author. His works include detective stories, among which are *The Viaduct Murder* and *Footsteps at the Lock*.
- Knutsford, 2nd Viscount** (1855-1931), was Chairman of the London Hospital for over 30 years.
- Koch, Robert** (1843-1910), the most noted bacteriologist of the time, whose discoveries in connection with the bacillus of tuberculosis have greatly benefited mankind. He also closely studied the causes of Asiatic cholera and of bubonic plague.
- Koniev, Marshal of Soviet Union, Ivan Stapanovich** (b. 1898), one of Russia's outstanding military leaders in the second world war. C-in-C. Soviet Army, 1946.
- Korda, Sir Alexander** (1893-1956), Hungarian-born British film producer. His productions included *The Private Life of Henry VIII*, *Catherine the Great*, *The Scarlet Pimpernel*, *Things to Come*, and *The Four Feathers*.
- Kosciusko, Tadeusz Andrzej Bonawentura** (1746-1817), a Polish general and patriot who achieved great distinction in 1794 by his gallant leading of the Polish revolutionary forces against Russia. From 1776 to 1783 took part in the American War of Independence.
- Kossuth, Louis** (1802-1894), a Hungarian patriot and leader, who in the struggle for his country's freedom in 1849 was for a time successful, but ultimately had to acknowledge defeat, and fled first to Turkey and afterwards to England, where he lived for some years.
- Kotlewela, Col. the Rt. Hon. Sir John Lionel, C.H., K.B.E.**, Prime Minister of Ceylon since 1953.
- Kreisler, Fritz** (b. 1875), the world-famous violinist, was born in Vienna, and as a child showed remarkable musical gifts. Made a successful tour of the U.S.A. when only 14. His first London appearance was in 1901. Has rendered great service by his arrangements of music for the violin.
- Kropotkin, Peter Alexievich, Prince** (1842-1921), anarchist, geographer and explorer, who, after a distinguished career in Russia, his native country, was imprisoned for favouring the political action of a working men's association, but escaped to England. He wrote many important books on socialistic and geographical subjects. Returned to Russia in 1917.
- Krüger, Stephanus Johannes Paulus** (1825-1904), the Boer leader, was one of the outstanding figures of South Africa in the last half of the nineteenth century. As a small boy he accompanied his family on the Great Trek. He was active in Transvaal politics for many years, and served as President from 1883 to 1900. His attitude towards the Uitlanders (English and other non-Boer white inhabitants of the Transvaal) produced much of the tension which led to the South African War. During the war he made unsuccessful attempts to secure help for the Boers from various European powers.
- Krupp, Alfred** (1812-1887), the famous German engineer, founded the great gun factories at Essen, which were the largest in the world. By his introduction of the Bessemer plan of casting steel and the steam hammer into Germany, he brought about an important development in heavy breech-loading guns, and built up factories which employed at the time of his death 20,000 workmen.
- Kubelik, Jan** (1880-1940), Czech violinist—son of a gardener at Michle, near Prague—who at the age of twelve played in public, and was one of the most renowned instrumentalists of his day. His son Rafael (b. 1914), a conductor of international repute, became musical director of the Royal Opera House, Covent Garden, in 1955.
- Kublai Khan** (1216-1294), a famous Mogul emperor and grandson of Jenghiz Khan. He greatly extended the Mogul empire by conquest, and lived in unparalleled splendour.

## L

- Lablache, Luigi** (1794-1858), a famous bass singer and actor, especially popular in London. He held the position of singing tutor to Queen Victoria.
- La Fayette, Marie Joseph Paul Roch Yves Gilbert du Motier, Marquis de** (1757-1834), French soldier and humanitarian politician who fought on the side of the Colonists in the American War of Independence and on returning to France became C-in-C. of the National Guard of Paris. By signing the demand that the king summon the States-General he became the first leader of the French Revolution, but stood out against its later excesses. In 1830 he was instrumental in setting Louis Philippe on the French throne.
- La Fontaine, Jean de** (1621-1695), the celebrated French poet and fabulist. His fables have been translated into all languages, and are unique.
- Lagerlöf, Selma, Ph.D.** (1858-1940), the famous Swedish novelist who was awarded in 1909 the Nobel Prize for literature. In 1914 was elected the first woman member of the Swedish Academy.
- Lagrange, Joseph Louis, Comte** (1736-1813), a noted French astronomer and mathematician.
- Lalande, Joseph Jerome Lefrançois de** (1732-1807), a famous French astronomer and director of the Paris Observatory. He founded the Lalande yearly prize for the best astronomical work or observation and wrote a well-known treatise on astronomy.
- Lamarck, Jean Baptiste Pierre Antoine de Monnet, Chevalier de** (1744-1829), the prominent French zoologist who occupied important scientific posts in Paris. A precursor of Darwin, his name rests mainly on his theory of the evolution of animals, known as Lamarckism. His chief work was the *Histoire Naturelle des Animaux sans Vertèbres*.
- Lamb, Charles** (1775-1834), one of the most delightful of our essayists. His *Essays of Elia* are characterised by great felicity of expression, much genial humour and an ardent love both of rural life and London life. He was a clerk in the office of the East India Company for thirty-five years. In some of his writings he was assisted by his sister, Mary Lamb, to whom he was greatly devoted.
- Lamb, Sir Horace, F.R.S.** (1849-1934), a British scientist, was the leading authority on hydrodynamics, and did valuable research work on wave motions and electricity.
- Lambert, Constant** (1905-51), English composer, conductor and critic; musical director of the Sadler's Wells Ballet. His *Rio Grande* for chorus, piano, and orchestra, shows jazz influence in its syncopation, use of percussion instruments, and boisterousness.
- Lamond, Frederic** (1868-1948), Scottish pianist and composer. A pupil of Liszt, and a great player of Beethoven's music. Was a professor at the Scottish National Academy of Music.
- Landon, Walter Savage** (1775-1864), a writer and poet of strong genius. He wrote a fine poetic tragedy *Count Julian* in 1812, and in later life published several other volumes of poems. The work by which he is best known, however, is his *Imaginary Conversations*.
- Landseer, Sir Edwin Henry, R.A.** (1802-1878), the most celebrated English animal painter of his time. He designed the lions for the base of the Nelson Monument in Trafalgar Square.
- Lane, Edward William** (1801-1876), an English

- writer to whom we owe the most popular translation of the *Arabian Nights*. He was also the author of a number of books dealing with ancient Egyptian and Arabic subjects, and was one of the most prominent Orientalists of the 19th century.
- Lang, Andrew** (1844-1912), Scottish scholar and writer of great versatility, his numerous works including poetry, fiction, history, fairy tales, folk-lore, and translations from the classics.
- Lang of Lambeth, Most Rev. Cosmo Gordon Lang**, 1st Baron, P.C., G.C.V.O., D.D. (1864-1945), Archbishop of Canterbury, 1928-42, and previously of York, 1908-28, and Bishop of Stepney, 1901-08.
- Langland, William** (c. 1330-1400), author of the alliterative poem *The Vision of Piers the Plowman*.
- Langley, Samuel Pierpont** (1834-1906), American physicist, astronomer and civil engineer, who became assistant at Harvard Observatory in 1865. In 1867 he became Director of the Allegheny Observatory, and in 1887 Secretary of the Smithsonian Institution. Invented the bolometer for recording variations in heat radiation and built a power-driven model aeroplane which made several successful flights in 1896.
- Langton, Stephen** (1151-1228), was Archbishop of Canterbury from 1213, and one of the chief instruments in forcing the Magna Carta from John.
- Lankester, Professor Sir (Edwin) Ray, K.C.B., M.D., F.R.S.** (1847-1929), natural historian and biologist. He founded in 1884 the Marine Biological Association, and was Director of the Natural History Departments of the British Museum; President of the British Association, 1906.
- Lansbury, Rt. Hon. George**, (1859-1940). First Commr. of Works, 1929-31. Chairman of Parliamentary Labour Party, 1931-35, and Leader of the Labour Party, 1932-35. M.P. Bow and Bromley, 1910-12, and 1922-40.
- Lao-Tzu**, one of the ancient philosophers of China, who flourished about 600 B.C. The classic upon which his fame rests, *Tao-té-ching*, was written many years later. See Taoism, Gen. Inf.
- Laplace, Pierre Simon, Marquis de** (1749-1827), French mathematician and astronomer whose researches on the motions of the solar system and the theory of probability earned him the title of "the Newton of France."
- La Rochefoucauld, François, Duc de** (1613-1680), a renowned French statesman and writer of the Louis XIV. period. His *Reflections and Moral Maxims* is a classic.
- Lasker, Emanuel, Ph.D.** (1868-1941), world's chess champion, 1894-1921—defeated by Capablanca (q.v.).
- Lassalle, Ferdinand** (1825-64), German socialist. Between 1862 and 1864 he conducted an extensive campaign by oratory and pamphleteering with the object of improving the social and political status of the poor. He himself was wealthy, and lived on a lavish scale, but his sympathy with the poor was genuine, and his campaign was quickly successful. He was founder of the German Socialist movement, and as such exerted deep influence throughout Europe. His life story forms the basis of George Meredith's novel *The Tragic Comedians*.
- Laszlo de Lombos, Philip Alexius, M.V.O.** (1869-1937), the most fashionable portrait painter of modern times. President of Royal Society of British Artists, 1930.
- Latimer, Hugh** (circa 1485-1555), the English Reformer who became Bishop of Worcester under Henry VIII., but when Mary came to the throne was condemned as a heretic and burned at the stake.
- Laud, William** (1573-1645), an eminent ecclesiastic, who, after filling three minor bishoprics, was made Archbishop of Canterbury in 1633. He did much to direct the policy of Charles I. and when trouble followed, he was impeached by the Long Parliament and committed to the Tower. Was tried for treason and beheaded.
- Lauder, Sir Harry (MacLennan)** (1870-1950), famous singer of Scottish songs and ballads. Composed own songs and wrote own music. Knighted 1919 for services in raising money for war purposes.
- Loughton, Charles** (b. 1899), English actor. Has acted in such plays as *On the Spot*, *Mr. Pickwick* and *Alibi*, and later took up film work, appearing in *The Sign of the Cross*, *The Private Life of Henry VIII.*, etc.
- Laurier, Rt. Hon. Sir Wilfrid, G.C.M.G., K.C.** (1841-1919), Premier of Canada from 1896 to 1911, and the first French-Canadian to hold that position. An ardent Liberal Imperialist.
- Laval, Pierre** (1883-1945), French politician, won notoriety over the Hoare-Laval pact in 1935. During the German occupation he was the arch French collaborator, and was afterwards tried for treason and shot.
- Lavery, Sir John, R.A.** (1856-1941), was an eminent portrait painter and of classical subject pictures. Pres. of the Royal Society of Portrait Painters, 1932-41.
- Lavoisier, Antoine Laurent** (1743-1794), often called the "father of chemistry," was born in Paris, and was the first to establish the fact that combustion is a form of chemical action.
- Law, Rt. Hon. Andrew Bonar** (1858-1923), Conservative statesman. He became leader of the Opposition in 1911, joined the Coalition in 1915, and served as Prime Minister from 1922 until shortly before his death in 1923.
- Lawrence, David Herbert** (1885-1930), one of the most powerful and original of modern novelists, and as a poet ranked among the best this century has produced. Author of *The White Peacock*, *Sons and Lovers*, *The Plumed Serpent*, etc.
- Lawrence, Sir Thomas, P.R.A.** (1769-1830), one of the fashionable portrait painters of his day.
- Lawrence, Col. Thomas Edward** (1838-1935), known as "Lawrence of Arabia," British soldier, archaeologist and explorer. Organised and led the Arabs against the Turks in the war of 1914-18. Author of *The Seven Pillars of Wisdom* (1926), of which an abbreviated edition, *Revolt in the Desert*, was published in 1927.
- Lawther, Sir William** (b. 1889), President of the National Union of Mineworkers 1940-54.
- Leacock, Stephen Butler** (1869-1944), Head of Dept. of Economics, McGill University, Montreal, 1908-36; but best known throughout the world as a humorous writer.
- Lecky, Rt. Hon. William Edward Hartpole, O.M.** (1838-1903), an eminent historian. His best-known works are *The History of England in the Eighteenth Century* and *The History of European Morals*.
- Leclerc (de Hautecloque), General Jacques Philippe**, Marshal of France (1902-1947), French soldier of considerable personal popularity. Was Governor of the Cameroons in 1940, declared for the Free French and later led a Free French force from Lake Chad across the Sahara desert to join the Allied Forces in North Africa. Liberated Paris in 1944; commanded French troops in Indo China, 1946. Killed in air crash in Algeria.
- Le Corbusier**, pseudonym of Charles-Edouard Jeanneret (b. 1887), Swiss-born French architect and town-planner whose works and theories with their emphasis on organic planning have profoundly influenced contemporary architecture. Famous for his *ville radieuse* conception of a city and architect of *L'Unité d'Habitation* at Marseilles and of Chandigarh, the new capital of East Punjab. Inventor of the Modulor, a simple system of dimensions related to each other harmonically, which forms the basis of all his work.
- Lee of Fareham, Viscount, P.C., G.C.B., G.C.S.I., G.B.E.** (1868-1947), First Lord of the Admiralty 1921-22. Minister of Agriculture, 1919-21. Presented Chequers Court to the nation as a residence for British Premiers, 1917.
- Lee, Robert Edward** (1807-70), was one of the ablest Confederate generals in the American Civil War, and C-in-C. when the final surrender was made at Appomattox in 1865.
- Lee, Sir Sidney** (1859-1926), the great authority on Shakespeare, and joint editor with Sir Leslie Stephen of the *Dictionary of National Biography*, exercising undivided control over the completion of that monumental work during the last ten years of its publication.
- Leech, John** (1817-1864), perhaps the most popular of all the *Punch* artists, whose sketches and cartoons were the life and soul of the paper for many years.
- Lehar, Franz** (1870-1948), Hungarian composer, chiefly of light operas of the "Viennese" type. His works abound in charming melody, and are competently orchestrated. Besides his famous *The Merry Widow*, which was first produced in 1905, he wrote *Gipsy Love*, *The*

- Count of Luxembourg, Eva, Frasnquita, Paganini, Frederika, The Land of Smiles and Giuditia.*
- Leibnitz, Gottfried Wilhelm, Freiherr von** (1646-1716), German writer and philosopher and one of the world's supreme intellects. Propounded a new system of philosophy, in which he maintained that the ultimate elements of the universe are individual centres of force or monads. Invented the infinitesimal calculus which he published in 1684, independently of Newton whose previous work on the same subject was published in 1687.
- Leicester, Robert Dudley, Earl of** (1581-88), son of John, Duke of Northumberland (*q.v.*), was a favourite of Queen Elizabeth. He commanded the English troops in the Netherlands, 1585-87, and in England before the Armada. Married to Amy Robsart (*q.v.*).
- Leighton, Lord, P.R.A.** (1830-96), a successful English painter and sculptor who chiefly adhered to classical subjects and was renowned for his extreme delicacy of finish and splendour of colour. Among his more famous paintings are *Venus Disrobing, Clytemnestra*, and *The Garden of the Hesperides*.
- Lely, Sir Peter** (1618-80), the famous painter to whom we owe so many of the portraits of the beauties of the Court of Charles II. He was born at Soest and his proper name was Van der Faes.
- Lenin, Vladimir Ilyich Ulyanov** (1870-1924), an active worker for the Russian Revolution from 1893-1917 both "underground" in Russia and abroad. It was in this period that the revolutionary Social-Democratic party was formed. An uncompromising revolutionary group, known as the Bolsheviks, developed within this party and Lenin was its leading spirit. In April 1917 Lenin returned to Russia. In the 1917 November Revolution the Provisional Government was overthrown by the Bolsheviks and Lenin became President of the new Government, the Council of People's Commissars—the Sovnarkom. From 1917 to his death in 1924 Lenin remained the active head of the Russian Soviet Government.
- Leonardo da Vinci** (1452-1519), one of the greatest all-round geniuses the world has known, painter, sculptor, architect, scientist, engineer and musician. Famed as the painter of *The Last Supper, Mona Lisa*, and other great works.
- Leonidas** was king of Sparta at the time of the invasion of Greece by Xerxes, 480 B.C., and led the defence of the Pass of Thermopylae, where he fell.
- Lermontov, Mikhail Yurevich** (1814-41), great Russian poet and novelist, exiled to the Caucasus for the passionate, revolutionary poem addressed to Czar Nicholas I, written on the death of Pushkin. He has often been called the poet of the Caucasus, for the stern, mountainous country of his youth and exile had a great influence on his poetry. His novel *A Hero of our Time* was written while he was at St. Petersburg in 1839. Lost his life in a duel.
- Le Sage, Alain René** (1668-1747), author of the famous stories *Gil Blas* and *Le Diable Boiteux*, also a dramatist of note.
- Leslie, Charles Robert, R.A.** (1794-1859), an eminent British painter; produced many notable pictures, including *The Play-Scene from Hamlet, Sancho Panza and the Duchess*, etc.
- Lesseps, Vicomte Ferdinand de** (1805-84), an engineer of large ideas who, while Vice-Consul at Alexandria, conceived the plan of the Suez Canal, which work was completed in 1869. He afterwards projected the original Panama Canal, which failed.
- Lessing, Gotthold Ephraim** (1729-81), a noted German critic and dramatic poet, whose most celebrated work was his *Laocoon*.
- Leverhulme of the Western Isles, 1st Viscount** (1851-1925). Chairman and founder of the soapmaking firm of Lever Brothers, Port Sunlight, which later, by purchase and amalgamation, increased in size and importance to become Unilever Ltd. He was for many years prominent as a business pioneer and man of affairs and one of the most practical exponents of the industrial partnership movement. Presented Lancaster House to the nation, the home of the London Museum.
- Leverhulme, 2nd Viscount, of the Western Isles** (1888-1949). Educated at Eton and Trinity Coll., Cambridge (M.A.). Son of 1st Viscount and Governor of Lever Brothers & Unilever. Apart from his own activities in the world of business, he took great interest in public life, in education and the arts, and in furthering international relations. Wrote the standard biography of his father, *Viscount Leverhulme, by his Son* (1927).
- Leverrier, Urbain Jean Joseph** (1811-77), the French astronomer, co-discoverer with John Couch Adams of the planet Neptune.
- Lewis, Cecil Day, C.B.E., M.A.** (b. 1904), poet and critic. Prof. of Poetry, Oxford Univ., 1951-6. Besides various poetical works has published translations of *The Georgics* and *The Aeneid* of Virgil; also detective novels under pseudonym of Nicholas Blake.
- Lewis, Clive Staples, M.A., F.R.S.L.** (b. 1898), author of various books of popular theology, such as *The Screwtape Letters* and *The Great Divorce*, and of the medieval study *Allegory of Love*.
- Lewis, Sinclair** (1885-1951), an American author who secured his first great success in 1920 with his novel of provincial American life, *Main Street*. *Babbitt*, published two years later, ruthlessly satirised the 100 per cent. disciple of American *Big Business*, and added a new term, "Babbittism," to the American language. Awarded the Nobel Prize for literature, 1931.
- Liaquat Ali Khan, The Hon., M.A.** (1895-1951). Prime Minister of Pakistan and Minister of Defence, 1947-51. Educated in England, took law degree at Oxford and called to the Bar. Closely associated with Mr. Jinnah, he took leading part in the negotiations for the partitioning of India in two dominions. Assassinated at Rawalpindi, Oct., 1951. His widow the Begum Liaquat Ali Khan became Pakistan's first woman Ambassador to the Netherlands at The Hague in 1954.
- Lidgett, Rev. Dr. John Scott, C.H., M.A., D.D.** (1854-1953), founder of the Bermondsey Settlement (1891); joint editor of the *Contemporary Review*; leader of Progressive Party on L.C.C., 1918-28; a former President of the National Free Church Council.
- Lie, Trygve** (b. 1896), Sec.-Gen. of the United Nations 1946-52. Formerly a leading Norwegian politician and Foreign Minister, 1941-46.
- Liebermann, Max** (1847-1935), German impressionist painter. Among his finest pictures are *The Flax Spinner, The Woman with Goats*, and *The Net-Menders*.
- Li Hung Chang** (1823-1901), an enlightened Chinese statesman and general, who by sheer ability rose from a humble position to be Chief Minister, and exercised almost supreme control for a number of years.
- Lilburne, John** (1614-57), an English political agitator and pamphleteer, who became the leader of the Levellers, the democratic party in the English Revolution.
- Linacre, Thomas** (c. 1460-1524), humanist scholar and physician, founder of the College of Physicians. Published translations of Galen's works.
- Lincoln, Abraham** (1809-65), was a native of Kentucky; in early life he became a lawyer, and was returned to Congress in 1846 from Springfield, Illinois, and in 1861 was elected 16th President of the United States, when he delivered his famous anti-slavery pronouncement, which led to the Civil War of 1861-65. In 1864 he was re-elected, and in the following year was assassinated by John Wilkes Booth.
- Lind, Jenny** (1820-87), a famous prima donna, "the Swedish nightingale" as she was called, who made a great sensation by her wonderful voice for some seasons in Europe, London and in America, from 1837 onward.
- Lindsey of Birker, Alexander Dunlop, 1st Baron, C.B.E.** (1879-1952), Master of Balliol College, Oxford, 1924-49. Professor of Moral Philosophy, Glasgow University, 1922-24. Vice-Chancellor, Oxford University, 1935-38. Author of many books on religion and philosophy.
- Linklater, Eric, C.B.E., M.A., LL.D.** (b. 1899), Scottish novelist and playwright, whose works include the novels, *Juan in America* and *Private Angelo*, and the play, *Crisis in Heaven*.
- Linnaeus, Carl von Linne** (1707-78), a tireless Swedish doctor and scientist who became one of the most distinguished of naturalists, and the founder of modern botany. His *Systema*

- Nature* was published in 1735, and other monumental works followed. First to expound the true principles for defining genera and species.
- Lippi, Fra Filippo** (1406-69), one of the great artists of the Italian quattrocento, whose frescoes can be seen in Prato Cathedral. His son **Filippino** (1457-1504) was equally gifted and executed many great works, including frescoes in the Carmine, Florence, and the altar-piece *Virgin and Saints* in the Uffizi Gallery.
- Lippmann, Gabriel** (1845-1921), French physicist, whose more important work was in the field of colour photography. His numerous inventions include the capillary-electrometer, which bears his name, and many other delicate instruments. Awarded the Nobel Prize for Physics, 1908.
- Lippmann, Walter** (b. 1889), American journalist, whose column in the *New York Herald Tribune* has a wide influence.
- Lipton, Sir Thomas Johnstone, Bt., K.C.V.O.** (1850-1931), after an adventurous early career in America, started shopkeeping in his native Glasgow, and in course of a few years became the largest shopkeeper in the world. Was renowned for his charities, and his attempts to win the America's Yachting Cup.
- Lister, Lord, P.C., O.M., F.R.S.** (1827-1912), achieved renown for his discovery of the antiseptic treatment which has accomplished so much on behalf of surgery. Pres. of Royal Socy. 1895-1900; and of British Assn. 1896.
- Liszt, Franz** (1811-86), Hungarian pianist and composer, whose brilliant playing astonished and delighted Europe and rather overshadowed his importance as a composer. He originated the symphonic poem. His daughter Cosima married Wagner.
- Litvinov, Maxim Maximovich** (1876-1952), Russian diplomat and statesman; Soviet Diplomatic Agent to Great Britain, 1917, Commissar for Foreign Affairs, 1929-39; Soviet Ambassador to United States, 1941-43.
- Livingstone, Dr. David** (1813-73), the great Scottish explorer and missionary, whose discoveries in Africa included the course of the Zambesi, the Victoria Falls, and Lake Nyasa. He opened up Central Africa to the influences of Christianity, and stirred the public conscience to the horrors of the Slave Trade. In 1871 considerable apprehension was felt in regard to his fate, but he was discovered by H. M. Stanley at Ujiji near Lake Tanganyika.
- Lloyd, Rt. Hon. John Selwyn Brooke, Q.C., C.B.E., M.P.** (b. 1904), For. Sec. 1955-; Min. of Defence, 1955; Min. of State at Foreign Office, 1951-55.
- Lloyd, Marie** (1870-1922), English music-hall artist and genius of Cockney comedy.
- Lloyd George of Dwyvor, Earl, O.M.** (1863-1945), Chairman of the Liberal Party, 1924-31. Prime Minister, Dec. 1916-22, M.P. for Caernarvon 1890-1944. In 1905 was made President of the Board of Trade. Chancellor of the Exchequer, from 1908 to 1915. Introduced the National Insurance Bill in 1911. In financing the war up to June, 1915, he showed great capacity. On the formation of the Coalition Government he became Minister of Munitions, and, on the death of Lord Kitchener, Secretary for War. As a War Premier he displayed activity, resourcefulness, and driving power, which proved a tremendous influence in bringing about the defeat of Germany; and at the Peace Conference, in conjunction with Clemenceau and President Wilson, he was a master spirit. His daughter Lady Megan Lloyd George who was Liberal M.P. for Anglesey from 1929 to 1951 joined the Labour Party in 1955.
- Locke, John** (1632-1704), one of the great English liberal philosophers and founder of empiricism, the doctrine that all knowledge is derived from experience. His chief work in theoretical philosophy, *Essay Concerning Human Understanding*, was written just before the revolution of 1688 and published in 1690. Other writings include: *Letters on Toleration*, *Treatises on Government*, and *Education*.
- Lockspeiser, Sir Ben, K.C.B., F.R.S.** (b. 1892) Secretary to the Department of Scientific and Industrial Research, previously Chief Scientist, Min. of Supply. Designed the balloon barrage and organised Britain's Air Defences.
- Lodge, Sir Oliver Joseph, D.Sc. F.R.S.** (1851-1940), Principal of Birmingham University 1900-19. A great scientist who was interested in psychical research, and one of the first to demonstrate the possibility of wireless communication. Was Prof. of Physics in University College, Liverpool, 1881-1900. President, British Association, 1913-14. Author of *Faith and Science*, etc.
- Lombroso, Cesare, M.D.** (1836-1909), famous Italian criminologist; in 1889 published his monumental work *L'uomo delinquente*, in which he put forward the theory that there was a definite criminal type which could be distinguished from the normal type, both anatomically and psychologically. He did much by his writings to hasten prison reform.
- Lomonosov, Mikhail Vasilyevich** (1711-65), Russian poet, philosopher, and scientist, closely associated with the foundation of Moscow University in the reign of the Empress Elizabeth.
- London, John Griffith ("Jack")** (1876-1916), an American novelist who led an adventurous life on fishing and sealing vessels and in the Klondyke goldfields and as a war correspondent in Japan, Korea and Manchuria, 1904, and Mexico, 1914. He also tramped throughout U.S.A. and Canada. Wrote many popular novels and stirring books of adventure.
- Longfellow, Henry Wadsworth** (1807-82), an American poet who produced a number of volumes of poetry of great purity of thought and beauty of language. Author of *Hiawatha*.
- Lonsdale, Dame Kathleen, D.B.E., F.R.S.** (b. 1903), Professor of Chemistry and head of the Dept. of Crystallography, Univ. College, Univ. of London. Her publications include *Structure Factor Tables*, *X-Rays and Crystals*, *International Tables for X-Ray Crystallography*, Vol. I, and *Removing the Causes of War*.
- Lonsdale, 5th Earl of, K.G., G.C.V.O.** (1857-1944), was a well-known sportsman whose special interests were horse-racing, hunting and boxing, the Lonsdale belts having been founded by him.
- Lope de Vega Carpio, Félix** (1562-1635), founder of the Spanish drama, and one of the great figures of Spanish literature. He was one of the most prolific of writers, his dramatic productions alone numbering 1500 plays, of which some 450 survive.
- Loti, Pierre** (1850-1923), pseudonym of the famous French novelist Louis Marie Julien Vland, whose works are noted for their excellent prose and a charm peculiarly his own, expressing an emotional sympathy with primitive nature. His most famous books are *The Iceland Fishermen* and *Madame Chrysanthemum*.
- Louis IX.** (1214-70), St. Louis, king of France, crusader, and peace-maker, fulfilled the medieval ideal of the knightly king. Memoirs by the Sire de Joinville.
- Louis XIV.** (1638-1715) reigned over France from 1643 to his death. He was responsible for corrupting Charles II., for the persecution of the Huguenots, the repeal of the edict of Nantes, and for the war of the Spanish Succession. He was a sensual, luxury-loving king, but encouraged arts and literature.
- Louis XV.** (1710-74), called the Well-Beloved. Was the most licentious of his race, and an inveterate hater of England.
- Louis XVI.** (1754-93), was the apathetic and unfortunate French king who married Marie Antoinette, allowed his country to be swayed by first one statesman and then another, until at last he saw himself divested of every shred of power by the Revolutionists. How he and his Queen were subsequently imprisoned and sent to the guillotine all students of French history know.
- Louis, Joe** (b. 1914), world's heavyweight boxing champion. Established a record by successfully defending his title twenty-four times in the years 1937-48. Retired from the ring in 1949.
- Low, Archibald Montgomery, D.Sc.** (b. 1888), a distinguished British scientist who has many inventions to his credit connected with wireless, television, coal and petrol engines, anti-aircraft and anti-tank rocket apparatus.
- Low, David Alexander Cecil** (b. 1891), the well-known cartoonist, creator of Colonel Blimp. Joined the *Manchester Guardian* in 1953, having previously been on the staffs of the *Daily Herald* and *Evening Standard*.
- Lowell, James Russell** (1819-91), an American writer and poet of singular power and humour.

- Loyola, St. Ignatius** (1491-1556), was the founder of the order of Jesuits.
- Lucretius** (Titus Lucretius Carus) (99-55 B.C.), great Roman poet of antiquity, whose life-work was the poem *On Nature* (*De rerum natura*) in six books, the first two of which set out the atomic theory of matter as understood by Epicurus.
- Ludendorff, General Erich von** (1865-1937), was Chief of Staff, and shared with Hindenburg the military leadership of Germany during the Great War. Was largely responsible for the victory of Tannenberg and the overwhelming successes of 1915.
- Ludwig, Dr. Emil** (1881-1948), author of many historical works, including biographies of Goethe, Beethoven, Bismarck, Napoleon, and Lincoln. The Nazis publicly burned his books. Lived for several years in the U.S.A. and died at Ascona in Switzerland.
- Lugard, Frederick, Lord** (1858-1945), British colonial administrator, a man of abounding energy, initiative, tact and firmness, and possessing considerable military abilities. Helped to build up the British dominions in tropical Africa (Nyasaland, Uganda, Nigeria) and to establish the principles of British African administration, notably the system of "indirect rule" through native rulers. In 1922 published the *Dual Mandate in Tropical Africa*, which set out the thesis that Europe is in Africa for the reciprocal benefit of her own industrial classes and the native races.
- Luther, Martin** (1483-1546), the great German Reformer. Was ordained a priest in 1507. Became Professor of Theology at the University of Wittenberg and until 1517 was an orthodox Roman Catholic. His first idea of revolt occurred when he saw indulgences being sold, a practice which he openly condemned. For this he was excommunicated, and summoned before the Diet at Worms, where he made a memorable defence. He then separated himself from the Roman Catholics, and began to preach the Reformed Religion, his doctrine being formulated in the confession of Augsburg. He lived to see the principles of the Reformation widely established.
- Lutyens, Sir Edwin Landseer, O.M., K.C.I.E., R.A.** (1869-1944), was a famous architect; designer of the Cenotaph; New Delhi; new British Embassy, Washington; Roman Catholic Cathedral Liverpool, etc. One of the principal architects for the Imperial War Graves Commission. Pres. of the Royal Academy, 1938-43.
- Lycurgus**, the Spartan legislator, who flourished about 344 B.C., and drew up a series of laws which endured for 700 years.
- Lyell, Sir Charles, Bt., F.R.S.** (1797-1875), distinguished geologist and author of *Principles of Geology*. He was a supporter of the Darwinian theory.
- Lysenko, Trofim** (b. 1898), Russian biologist, who developed a successful process of scientific farming (vernalisation). His concept of genetics, that environmental experiences can change heredity, though discredited in scientific circles outside the U.S.S.R., was accepted there as an official dogma until 1953. Resigned as Pres. of the All-Union Academy of Agricultural Sciences, 1956. Pubs. include *Heredity and its Variability* (1943) and *Agrobiologia* (1948).
- Lytton, Edward George Earle Bulwer, 1st Baron, P.C., G.C.M.G.** (1803-73), a prolific novelist and dramatist, whose romantic stories made him famous, and included *Pelham*, *The Last Days of Pompeii*, and *The Caxtons*.
- Lytton, Sir Henry Alfred** (1867-1936), was a noted British actor who scored many successes, chiefly playing Gilbert and Sullivan roles.

## M

- Macadam, John Loudon** (1756-1836) was a Scottish engineer who invented the process of road-repairing which bears his name. This made a great improvement in road travel.
- MacArthur, General Douglas, Hon. G.C.B., D.S.C., D.C.M.** (b. 1880), American soldier famous for his gallant defence of the Philippines against the Japanese in 1941-42, after which he was Com.-in-Chief of Allied Forces, South-West Pacific area. Supreme Commander for Allied Powers in Japan from 1945, and for U.N. forces

- in Korea campaign, 1950-51. Relieved of his commands in the Far East by President Truman in April 1951.
- Macaulay, Rose** (b. c. 1895), an English authoress and literary critic. Among her literary successes are *Potterism*, *Dangerous Ages*, *Told by an Idiot*, *Orphan Island* and other novels noted for their keen satirical wit and devastating exposure of the follies of her time.
- Macaulay, Thomas Babington, Lord** (1800-59), the most brilliant historian of the Victorian era. His fame was assured by his *Essays and Lays of Ancient Rome*, and his *History* did more than confirm it. He was a son of Zachary Macaulay (1768-1838), the anti-slavery agitator, and sat in Parliament as member for Calne for some years, also serving for five years as a member of the Supreme Council of Calcutta. On his home-coming, he again entered Parliament as member for Edinburgh, and gained a new celebrity by his speeches. He at different times filled the offices of Paymaster-General and Secretary for War. Both Lord Macaulay and his father lie buried in Westminster Abbey.
- Macbeth**, according to Holinshed's *Chronicle*, was the usurping Scottish king who succeeded Duncan, whom he murdered. Macbeth was slain by Duncan's son Malcolm in 1056, after a reign of seventeen years. His history forms the subject of Shakespeare's celebrated tragedy.
- MacCarthy, Sir Desmond, F.R.S.L., Hon. D.Litt., Hon. LL.D.** (1877-1952), journalist and critic who became dramatic critic to *The Speaker*, 1904, and *The New Statesman*, 1913, where he soon made a reputation both for the substance and style of his writings. He edited *The New Quarterly*, 1907-10 and later *Life and Letters*. Latterly was literary critic to *The Sunday Times*.
- McCarthy, Justin** (1830-1912), Irish politician, novelist, and historian, from 1879 to 1896 was a prominent member of the Irish Party in Parliament, succeeding Mr. Parnell in 1890 in the leadership of the party.
- McCormack, (Count) John** (1884-1945), was the world famous Irish tenor who became a naturalised American citizen in 1919; received a Papal peerage as Count from Pius XI in 1928.
- Macdonald, Flora** (1722-90), attracted much romantic interest by her bravery in conducting Prince "Charlie" to the Isle of Skye, when he was pursued. She afterwards married and settled in America, but ended her days in Skye.
- Macdonald, Rt. Hon. James Ramsay** (1866-1937), Prime Minister in the first two Labour Governments, 1924, 1929-31, and in a Coalition Government dominated by Conservatives, 1931-35. His son, Malcolm (b. 1901), has been Dominions Secretary, High Commissioner in Canada, Gov.-Gen. of Malaya, Comm.-Gen. for S.E. Asia, and since 1955 High Comm. in Delhi.
- McDougall, William, F.R.S.** (1871-1938), British psychologist. Professor of Psychology at Harvard University 1920-27, and Duke University, North Carolina 1927-38. Wrote *Body and Mind*, 1911, *The Group Mind*, 1920, *Outline of Psychology*, 1923.
- Machiavelli, Niccolo** (1469-1527), a Florentine diplomatist and historian, whose book, *Il Principe*, has maintained its celebrity as a masterly exposition of the method of governing by artifice.
- Mackail, Prof. John William, O.M.** (1859-1945), British classical scholar, Prof. of Poetry at Oxford, 1906-11, and translator of the *Odyssey*. Father of Denis Mackail (b. 1892), novelist and short-story writer, and of Angela Thirkell (b. 1890), also a novelist.
- McKell, Sir William John, G.C.M.G., K.C.** (b. 1891), Gov.-Gen. of Australia 1947-1952, Previously engaged in Australian politics.
- Mackenzie, Sir (Edward Montague) Compton, O.B.E.** (b. 1883), one of the foremost of present-day British novelists; literary critic to the *Daily Mail*, 1931-35; Rector of Glasgow Univ., 1931-34.
- McMillan, Margaret, C.H., C.B.E.** (d. 1931), Scots-woman, born in America, who with her sister Rachel was a pioneer of child welfare work. Founder of open-air nursery schools. The Rachel McMillan nursery school at Deptford is a memorial to her work.
- McNaughton, Gen. Hon. Andrew George Latta, C.H., D.S.O.** (b. 1887), Canadian soldier, politician, electrical engineer, and representative on the U.N. Atomic Energy Commission.

- Macready, William Charles** (1793-1873), was the outstanding tragic actor of his time and was extremely successful in Shakespearian and other rôles.
- Maeterlinck, Count Maurice** (1882-1949), the distinguished Belgian poet and critical writer. His principal works are *La Princesse Maleine*, *Pelleas et Melisande*, *La Sagesse et la Destinée*, *The Blue Bird* and *The Burgomaster of Stilemonde*.
- Magellan, Ferdinand** (c. 1480-1521), a famous Portuguese navigator, and commander of the first expedition (1519) to sail round the world.
- Maintenon, Françoise d'Aubigné, Marquise de** (1635-1719), after being the wife of the poet Scarron, drifted into Court circles, and so fascinated Louis XIV, that he ultimately married her. At his death she retired to a convent.
- Malenkov, Georgiy Maximilianovich** (b. 1901), Chairman of the Council of Ministers (Prime Minister) of the Soviet Union from the death of M. Stalin in 1953 to 1955.
- Malibran, Marie Félicité** (1808-36), was one of the most famous operatic singers of her time.
- Malik, Yakov Alexandrovich** (b. 1906), Soviet diplomatist who has been Deputy Min. of Foreign Affairs, Permanent Rep. of U.S.S.R. to U.N., 1948-52, and since 1953 Soviet Ambassador to Great Britain.
- Malory, Sir Thomas** (c. 1430-70), compiled the *Morte d'Arthur*, which was printed by Caxton in 1485, and relates the story of King Arthur and the Knights of the Round Table.
- Malthus, Thomas Robert, F.R.S.** (1766-1834), an English clergyman and political economist who in his essay on *The Principle of Population* proposed to limit the increase of population by discouraging marriage and otherwise.
- Malvern, 1st Viscount, Godfrey Martin Huggins, C.H., K.C.M.G., F.R.C.S.**, Prime Min. of S. Rhodesia, 1933-53 and of the Fed. of Rhodesia and Nyasaland since its formation in 1953.
- Manet, Edouard** (1832-83), French Impressionist painter, who knew the melodic values of colour and harmony and the use of grey tones. His pictures *Olympia* and *Lola de Valence* have been acclaimed masterpieces.
- Mann, Thomas** (1875-1955), German writer who won immediate world recognition at the age of 25 with his novel *Buddenbrooks*. His liberal humanistic outlook had developed sufficiently by 1930 for him unerringly to expose the nature of National Socialism. Having become almost the most hated target of Nazi propaganda, he left Germany in 1933, living first in Switzerland, and then accepting Czechoslovakian and subsequently United States nationality. He spent the war years in the States, but left when the changed political climate made itself felt to return to Switzerland. Awarded the Nobel Prize for Literature in 1929; E. and W. Germany combined to honour him with the Goethe Prize in 1948. His best-known works, apart from many volumes of essays, stories, and shorter novels, are *The Magic Mountain* (1924), the *Joseph tetralogy* (1935-43), and *Dr. Faustus* (1947).
- Mann, Tom** (1856-1941), was a prominent British Labour leader for more than 50 years.
- Manning, Henry Edward, Cardinal** (1808-92), Cardinal Archbishop of Westminster 1875-92, was a prominent Anglican Churchman up to 1851, when he joined the Church of Rome.
- Mansfield, Katherine** (1890-1923), well-known short-story writer. Wife of John Middleton Murry, the author and literary critic. *Bliss* (1920), *The Garden Party* (1922), and *The Dove's Nest* (1923), contain most of her stories.
- Manson, Sir Patrick, G.C.M.G., M.D., F.R.S.** (1844-1922), an eminent physician who specialised in parasitology and became physician and medical adviser to the Colonial Office. He was the first to formulate the hypothesis that the malarial parasite was transmitted by the mosquito. The joint work of Sir Patrick Manson and Sir Ronald Ross rendered habitable vast areas of the earth hitherto closed.
- Manuzio, Aldo Pio** (1450?-1515), Italian printer, founder of the Aldine press in Venice, which for just over a century issued books famed for their beautiful type and bindings.
- Manzoni, Alessandro Francesco Tomaso Antonio** (1785-1873), Italian writer, whose romantic novel *I Promessi Sposi* ("The Betrothed") is generally regarded as the most important work in Italian literature after "The Divine Comedy."
- Mao Tse-Tung** (b. 1893), Chairman of the Chinese Communist Party since 1936 and first chairman of the Central Government of the People's Republic of China, formally established at Peking in October 1949, following the military defeat of the Nationalist forces.
- Marat, Jean Paul** (1743-93), one of the leading actors in the French Reign of Terror. Killed by Charlotte Corday.
- Marconi, Marchese Guglielmo, Hon. G.C.V.O.** (1874-1937), was an ingenious Italian electrician who was educated at Leghorn and Bologna. Coming to England, he studied with Sir William Preece and in 1896 brought forward an apparatus by which he succeeded in sending wireless messages. In 1902 succeeded in transmitting trans-oceanic messages. Established a public wireless telegraph service across the Atlantic in 1907. Awarded Nobel Prize for Physics, 1909.
- Marco Polo.** (See Polo, Marco.)
- Marcus Aurelius Antoninus** (121-180), the greatest of Roman emperors and a disciple of the stoics.
- Maria Theresa** (1717-80), a woman of remarkable strength of character and ability, succeeded her father Charles VI., as Austrian Empress. She was an enlightened ruler and has been called a "benevolent despot."
- Marie Antoinette Josephe Jeanne** (1755-93) was daughter of the Empress Maria Theresa and the Emperor Francis I. of Austria, and became wife of Louis XVI. of France. She entered with spirit into the gaiety of French Court life, and drew down upon herself much popular hatred in consequence. In the terrible events which followed the outbreak of the Revolution she was one of the chief sufferers, but bore her fate with dignity and resignation, and met her death on the scaffold with unflinching courage.
- Marie Louise** (1791-1847), daughter of Francis I. of Austria, became wife of Napoleon in 1810, and bore him a son. (See Napoleon II.)
- Marius, Caius** (b.c. 155-86), was one of the most distinguished Roman generals, a tribune of the people, praetor, and six times Consul. He was Proprietor of Spain in 114 B.C.
- Mark Antony.** (See Antonius, Marcus.)
- Marlborough, John Churchill, 1st Duke of** (1650-1722), brilliant soldier, the victor of Blenheim, Ramilies, Oudenarde, and Malplaquet. Married to Queen Anne's favourite, Sarah Jennings.
- Marlowe, Christopher** (1564-93), one of the greatest of the Elizabethan dramatists. His principal plays are *Dr. Faustus*, *Tamburlaine the Great*, *Edward II.*, and *The Jew of Malta*. He was killed in a tavern brawl at Deptford.
- Marryat, Captain Frederick** (1792-1848), an exceedingly popular writer of sea stories. Author of *Peter Simple*, *The King's Own*, *Jacob Faithful*, and *The Children of the New Forest*.
- Marshall, General George Catlett** (b. 1880), outstanding American soldier and statesman. Sec. of Defence, 1950-51; Chief of Staff of U.S. Army, 1939-45. After serving as special envoy to China 1945-47, was Sec. of State until his resignation in January 1949. Initiated the American offer of aid to Europe, which led to the European Recovery Programme. Awarded Nobel Peace Prize, 1953.
- Martial (Marcus Valerius Martialis)** (A.D. c. 40-A.D. c. 104) was born at Bilbilis in Spain, but spent the greater part of his life in Rome, where he acquired much fame as a poet and epigrammatist.
- Marvell, Andrew** (1620-78), English poet, satirist and diplomatist, friend of Milton, who was best known for his many prose satires and lampoons.
- Marx, Heinrich Karl** (1818-83), German philosopher and socialist and lifelong partner and friend of Engels with whom he collaborated in writing many important works on socialism and in developing his theories of dialectical materialism. After being expelled from the continent he settled in London where he wrote his monumental work *Das Kapital*. Communism is based on the teachings of Marx.
- Mary I.** (1516-58), daughter of Henry VIII. and Catherine of Aragon. Was Queen of England from 1553 to her death. She was a strenuous Roman Catholic, and entirely reversed the religious order of things during her brief reign, persecuting, imprisoning, and burning at the stake many of the Protestant reformers, nearly

- three hundred persons being put to death as heretics. She married Philip of Spain in 1554.
- Mary II** (1662-94), daughter of James II. Came to the English throne in 1689, having been married to her cousin, William of Orange, eleven years previously. After assenting to the "Declaration of Rights," they reigned jointly until her demise.
- Mary, H.M. Queen, K.G., K.T., G.C.V.O.** (1867-1953), Queen Consort of George V.
- Mary, Queen of Scots** (1542-87), was a daughter of James V, of Scotland, and was married to the Dauphin of France at sixteen years of age, and lived at the French Court. On the death of her husband in 1560 she returned to Scotland, and for a time was the acknowledged Queen of the Scots. In 1565 she married Lord Darnley, and thenceforward from one cause and another her entanglements increased. Jealous of Rizzio, the Queen's Italian secretary, Darnley had him murdered in Holyrood Palace, in the presence of the Queen and twelve months later Darnley himself was murdered by Bothwell, who married Mary three months afterwards. The Scottish nobles, angered by these various acts, rebelled against Mary, and she was made prisoner and confined in Loch Leven Castle, compelled to abandon Bothwell and to sign an Act of Abdication in favour of her son. Escaping to England, she sought the protection of Elizabeth, but that monarch refused to give her her freedom, and imprisoned her for the next nineteen years in various castles, and ultimately had her beheaded on a charge of conspiracy. She was buried in Peterborough Cathedral but after her son James I. of England ascended the throne her remains were removed to Westminster Abbey.
- Masaryk, Jan Garrigue** (1886-1948), son of Thomas Masaryk. Served as Czech Minister in London, 1925-38 and as Foreign Secretary, 1940-48. His sudden and tragic death removed a cultured and lovable citizen of the world.
- Masaryk, Thomas Garrigue** (1850-1937), Czech philosopher, statesman and founder and first President of Czechoslovakia, 1918-35.
- Mascagni, Pietro** (1863-1945), the Italian composer, who attained sudden celebrity by his *Cavalleria Rusticana* in 1890, and afterwards produced a number of operas of a more ambitious character, but perhaps not up to the level of his first effort.
- Masefield, John Edward, O.M.** (b. 1878), Poet Laureate since 1930. A prolific writer of notable poems as well as numerous plays.
- Maskelyne, John Nevil** (1839-1917), famous illusionist who exposed the mysteries of the Davenport spiritualistic quacks.
- Mason, Alfred Edward Woodley** (1865-1948), an English novelist, author of many popular stories of adventure including *The Four Feathers* and *Fire Over England*.
- Massenet, Jules Emile Frédéric** (1842-1912), French composer. Operas *Salome*, *Manon*, *Le Cid*, *Thaïs*.
- Massine, Leonide** (b. 1896), a famous Russian dancer who was for some years Ballet Master at the Roxy Theatre, New York. Among his more famous ballets are *The Good Humoured Ladies*, *Boutique Fantasque*, *Pas d'Acier*, *Les Matelots*, *Le Beau Danube* and *Les Présages*.
- Massingham, Harold John** (1888-1952), English author and journalist who wrote on a wide range of subjects and was an authority on bird life and ethnology. He was a noted writer on natural history and also contributed essays to most of the leading periodicals.
- Masters, Edgar Lee** (1869-1950), American poet who occupies a permanent place in American literature by the publication in 1915 of his *Silver Spoon Anthology*, a hundred poems relating the real character as opposed to the eulogistic inscriptions on their tombstones of the dead in a typical American township.
- Matisse, Henri** (1869-1954), French painter, and one of the leading representatives of the modern school of painting in France, becoming the foremost member of a group that were known as *les Fauves*. His work is remarkable for its use of pure and brilliant colour and its reliance on colour variations to express form and relief.
- Matsys or Metzys, Quintin** (1466-1530), a distinguished Flemish painter, who was originally a blacksmith. He excelled in Scriptural subjects,
- Maugham, (William) Somerset, C.H.** (b. 1874), British dramatist and novelist. Born in Paris, he qualified as a doctor, but soon abandoned medicine for literature, achieving a great success with his first novel in 1897, *Liza of Lambeth*, a study of slum life. His medical training gave him a deep insight into human nature, and in his numerous later stories he was a clever and cynical depicter of character. As a dramatist he was equally successful, his immensely popular plays being, for the most part, cynical exposures of modern conventions.
- Maupassant, Henri Rene Albert Guy de** (1850-93), the famous French author and writer of short stories, was a friend of Flaubert, Zola and Daudet. He was the greatest of all European short-story writers, standing alone in grace, wit and epigram.
- Mauriac, François** (b. 1885), French novelist whose works are regarded as among the chief literary productions of to-day. In addition to a long series of novels he has written many critical works and essays. Leader-writer for *Figaro*; Nobel Prizewinner, 1952.
- Maurice, Rev. Frederick Denison** (1805-72), a leader of religious thought and social reform, his *Theological Essays* being characterised by ideas then regarded as very advanced.
- Mauvois, André, K.B.E.** (b. 1885), one of the most brilliant and successful of modern French writers. Has written many charming essays and biographies of Shelley, Disraeli, Byron, Voltaire, etc.
- Mawson, Sir Douglas, O.B.E., D.Sc., F.R.S.** (b. 1882), leader of the Australian Antarctic expedition of 1911-14 and of the British-Australian and New Zealand Antarctic expedition 1929-31; previously a member of the Shackleton expedition. His party endured terrible sufferings in 1912; all died except himself. In 1913 he established a scientific station on the Macquarie Islands.
- Maxim, Sir Hiram Stevens** (1840-1916), the inventor of the famous automatic quick-firing gun.
- Maxton, James** (1885-1946), was a prominent Socialist politician; M.P. for the Bridgeton Divn. of Glasgow, 1922-46. Chairman of I.L.P. 1926-31 and 1934-39.
- Maxwell, James Clerk** (1831-79), Scottish physicist who wrote his first scientific paper at the age of 15. Was Professor of Natural Philosophy at Aberdeen, 1856, and for eight years held the same post at King's College, London, 1860-68. In 1871 he became the first holder of the new Professorship of Experimental Physics at Cambridge University. His best-known work is his treatise on electricity and magnetism, published in 1873. He made the discovery that founded the electro-magnetic theory of light, and to his electrical researches the advent of wireless is due.
- Mazarin, Jules** (1602-61) an Italian Cardinal who became chief Minister of State under Louis XIV., and was for a number of years the practical ruler of France. He succeeded Richelieu.
- Mazeppa-Koledinsky, Ivan Stepanovich** (1644-1709), the hero of Byron's poem, was a real personage, and a Pole, and was tied naked on the back of a wild horse, and so sent out across the Russian desert, for an intrigue with a noble's wife. He was liberated by Cossacks and afterwards attained an honourable position.
- Mazzini, Giuseppe** (1805-72), an Italian patriot, who, in his endeavours to secure the independence of Italy, incurred the disfavour of the authorities, and was compelled to leave the country. He started a newspaper called *Young Italy* at Marseilles, and in 1837 came to London, and kept up his attacks upon existing governments. In 1848 he was back in Rome, and was elected dictator of the Roman Republic. He was not allowed to hold this position long, however, for the French occupied Rome and Mazzini was driven to England again. The unification of Italy was accomplished in other ways than those advocated by Mazzini, but he lived to see Victor Emmanuel King of United Italy.
- Mehul, Etienne Nicolas** (1763-1817), French composer, known principally for his operas, which carried on the tradition laid down by Gluck. In all he composed over 40 operas, besides numerous vocal works.
- Melissomier, Jean Louis Ernest** (1815-91), an eminent French painter.

**Melba, Dame Nellie, G.B.E.** (1865-1931), the celebrated *prima donna* was born in Melbourne—her father was the late David Mitchell of Melbourne, and her mother of Spanish descent—and made her *début* in 1887 at Brussels.

**Melbourne, 2nd Viscount** (1779-1848) Queen Victoria's first premier, holding office over six years, and identified with many important Liberal measures.

**Mendel, Gregor Johann** (1822-84), Austrian botanist. After joining the Augustinian order, he moved to the monastery at Brün where he afterwards became Abbot and taught natural history in the school there. His main interest, however, was the study of inheritance, and his elaborate observations of the common garden pea resulted in the famous law of heredity which to-day bears his name. His hypothesis was published in 1866 but no attention was given to it until 1900.

**Mendeleev, Dmitry Ivanovich** (1834-1907), Russian chemist who made important contributions to physical chemistry and general chemical theory. First to discover the critical temperatures and formulated the Periodic Law of atomic weights. Element 101 is named after him.

**Mendelssohn-Bartholdy, Felix** (1809-47), the celebrated German composer, whose works are of delicate spirituality, full of melodic beauty, and in the highest sense artistic. He was the grandson of Moses Mendelssohn, the philosopher, whose writings gained for him the title of "the Socrates of the Jews," and who died in Berlin in 1786. The younger Mendelssohn was Director of Concerts in Leipzig for a time, lived in Italy several years, and was a frequent visitor to England. His two oratorios, *St. Paul* and *Elijah*, are magnificent compositions.

**Mendès-France, Pierre, LL.D.** (b. 1907), French statesman. His skilful diplomacy and energy helped to solve the many problems that faced his country when he took office as Prime Minister in June 1954. His government was overthrown in Feb. 1955.

**Menuhin, Yehudi** (b. 1916), violin virtuoso, one of the greatest musical prodigies of the 20th century. Born in New York of Jewish parentage; made his first London appearance in the San Francisco Orchestra, 1929.

**Menzies, Rt. Hon. Robert Gordon, C.H., Q.C.** (b. 1894), Australian Liberal leader; Prime Minister, 1939-41 and since 1949.

**Mercator, Gerhardus** (1612-94), the Flemish geographer who invented a celestial and a terrestrial globe, by which he introduced his famous projection, in which meridians and parallels of latitude cross each other at right angles, both being indicated by straight lines. This greatly simplified navigation.

**Meredith, George, O.M.** (1828-1909), novelist and poet, "the Grand old Man of English letters." His works are rich in imagery, poetry, wit, and characterisation, and as a delineator of womanhood he is unsurpassed. Among his great novels are *Ordeal of Richard Feverel*, *Evan Harrington*, *Rhoda Fleming*, *The Egoist*, *Diana of the Crossways*, and *The Amazing Marriage*.

**Mesmer, Friedrich Anton** (1738-1815), was a German doctor who founded the system of mesmerism or animal magnetism.

**Mestrovic, Ivan** (b. 1883), a Dalmatian sculptor, recognised as one of the leading European sculptors of the present time. The Tate Gallery and the Victoria and Albert Museum have examples of his work.

**Metchnikov, Ilya** (1845-1916), an eminent Russian biologist; Nobel Prize for Medicine, 1908.

**Meyerbeer, Giacomo** (1794-1864), was born in Germany, but spent most of his life in Paris, where he produced all his great operas, which include *Robert le Diable*, *Les Huguenots*, *Le Prophète*, and several others.

**Meynell, Alice** (1849-1922), English poet and essayist, wife of Wilfred Meynell (1852-1948), editor of the Catholic paper *Merry England*.

**Michelangelo** (Michelagnoli Buonarroti) (1475-1564), the renowned Italian painter, sculptor, architect and poet, whose genius was such a power in beautifying the churches of Rome and Florence. Was the last and in some respects the greatest of the Italian sculptors; while his large paintings, particularly *The Last Judgment*, in the Sistine Chapel, are no less famous.

**Michelot, Jules** (1798-1874), a noted French historian and author.

**Michelson, Albert Abraham** (1852-1931), American physicist, born in Poland. Designer of an interferometer for estimating the diameters of stars. Collaborated with E. W. Morley in the *Michelson-Morley* experiment to measure the velocity of the earth through the "ether" which led to the conclusion that the ether is non-existent and had great value for Einstein's theory of relativity. Was the first American scientist to win the Nobel prize for Physics, 1907, in which year he was also awarded the Copley Medal.

**Mickiewicz, Adam** (1798-1855), greatest Polish poet and revolutionary. Chief works *The Ancestors*, *Pan Tadeusz*.

**Milford Haven, Admiral of the Fleet Prince Louis Alexander Mountbatten, 1st Marquess of, P.C., G.C.B., G.C.V.O., K.C.M.G.** (1854-1921), up to July, 1917, known as Prince Louis of Battenberg, son of Prince Alexander of Hesse, and married to his cousin, Princess Victoria, daughter of Princess Alice of England and the Grand Duke of Hesse. Father of Earl Mountbatten and grandfather of H.R.H. The Duke of Edinburgh. Had a successful career in the British Navy, which he entered in 1868.

**Mill, John Stuart** (1806-73), achieved high reputation by his numerous works on philosophical questions and wrote, amongst other books, *Principles of Political Economy*, *Essay on Liberty*, and *Utilitarianism*.

**Millais, Sir John Everett, Bt., P.R.A.** (1829-96), was at one time the most prominent of the English Pre-Raphaelites, but soon cast himself free from their mannerisms, and began the production of a long series of famous pictures. Among his numerous works we have room to mention only *The Eve of St. Agnes*, *Autumn Leaves*, *The Order of Release*, *Effie Deans*, *Chill October*, and *Bubbles* (see the Frontispiece).

**Millet, Jean François** (1814-75), one of the greatest of French painters of pastoral subjects; his celebrated work *The Angelus* is universally known by its numerous reproductions.

**Millikan, Robert Andrews** (b. 1898), American physicist who is world famous for his researches on electrons, and for discovering the cosmic rays. Professor of Physics at Chicago University 1910-21, and Director of the Norman Bridge Laboratory of Physics at Pasadena, California 1921-45. Awarded Nobel Prize for Physics, 1923.

**Milne, Alan Alexander** (b. 1882), English humorist, poet, and playwright. Has written much delightful verse and stories for children.

**Milner, Alfred, Viscount** (1854-1925), imperial statesman, who served in South Africa from 1897 to 1905 and had great influence on the history of that country. Was Secretary for War in 1918 and for the Colonies, 1919-21.

**Miltiades** (d. 489 B.C.), one of the leaders of the Athenian army against the Persians at Marathon.

**Milton, John** (1608-74), England's chief epic poet, whose *Paradise Lost* is the greatest poem of the kind in the language. The best known of his other poems are probably the *Ode on the Morning of Christ's Nativity*, *L'Allegro*, *Il Penseroso*, *Lycidas*, and the sonnet *On his Blindness*. In 1652 he became totally blind, and at his death was buried in St. Giles's Church, Cripplegate, London, a monument being erected to his memory in Westminster Abbey.

**Minot, George Richards, M.D.** (1885-1950), an eminent American doctor who became Prof. of Medicine at Harvard in 1928, and famous for his researches in the pathology of the blood, and for his discovery of the curative properties of liver in pernicious anaemia. Shared the Nobel Prize for Medicine, 1934.

**Mirabeau, Gabriel, Comte de** (1749-91), one of the prominent figures of the French Revolution, and a famous orator.

**Mistral, Frédéric** (1830-1914), French poet who spent his whole life in Provence and wrote many works of great lyrical beauty; founded the *Félibrige* society (*s.v.* Gen. Inf.); completed *Lou Tresor dóu Félibrige* in 1886, a Provençal dictionary and encyclopædia of Provence. Awarded Nobel Prize for literature in 1904.

**Mithridates** (circa 132-63 B.C.), was King of Pontus

from 120-63 B.C., and showed great capacity as a commander, conquering a great part of Asia Minor and Greece.

**Moffat, James** (1870-1944), Scottish divine who translated the Bible into modern English.

**Mohammed** (570-632), the founder of Islam, the religion of the Moslems, fled from Mecca to Medina in 622, from which date the Mohammedan era opens. By his constant preaching and proclaiming of the one and only Deity Allah he gathered round him a small and loyal, hard-fighting band of followers and was able to return to Mecca eight years later, an acknowledged conqueror. The Sacred Book of Islam, the *Koran*—though presented by him as an original revelation from the Angel Gabriel—may in the main be traced to Biblical and Rabbinical sources.

**Moiseiwitsch, Benno, C.B.E.** (b. 1890), Russian-born, naturalised British pianist, especially well known for his rendering of the works of the Romantics.

**Molière** (Jean Baptiste Poquelin) (1622-73), the greatest of French comic dramatists, who, from being a poor strolling player, became the leading dramatist of his time. His greatest comedies were *Le Tartuffe*, *Le Misanthrope*, *Le Malade Imaginaire* and *Le Médecin malgré lui*.

**Molotov, Vyacheslav Mikhailovich** (Skryabin) (b. 1890), Russian diplomat. Organised student groups and worked on *Pravda* and was a member of the Petrograd Soviet Executive in 1917. His influence gradually increased, until in 1939 he succeeded Litvinov as Commissar for foreign affairs, a position he held until 1949. Member of the former Politburo and since 1953 Foreign Minister; chief representative of the Soviet Union at numerous post-war conferences.

**Moltke, Field-Marshal Count Helmuth von** (1800-91), was responsible for the Prussian strategy in the Danish, Austrian, and Franco-Prussian wars, in all of which he was outstandingly successful.

**Mond, Ludwig, Ph.D., F.R.S.** (1839-1909), German chemist who in 1867 settled in England as an alkali manufacturer and in partnership with John Brunner successfully manufactured soda by the Solvay process. Founded the Davy-Faraday laboratory.

**Monet, Claude** (1840-1926), the most representative of the French Impressionists. Exhibited in 1874 his landscape *Impression, Soleil levant*, from which the word *Impressionism* was derived. Loved painting water and atmospheric effects.

**Monier-Williams, Sir Monier, K.C.I.E., LL.D.**, Ph.D. (1819-99), a great Sanskrit scholar who laboured with distinction in bringing westward the wisdom of the Orient.

**Monk, George, 1st Duke of Albemarle** (1608-69), served with distinction as general and admiral, particularly in the Anglo-Dutch wars, and in 1660 effected the Restoration of Charles II.

**Monroe, James** (1758-1831), Fifth President of the U.S. Was appointed Governor of Virginia in 1799, and in 1803 went to France and carried through the purchase of Louisiana. Best known as the author of the Monroe Doctrine, which he outlined in his Presidential message of 1823.

**Montaigne, Michel de** (1533-92), a French essayist of world-wide celebrity, who may be regarded as the inventor of the essay form, and had a great influence on English writers.

**Montcalm, General Louis Joseph, Marquis de** (1712-59), commander of the French Army against the British in Canada in the final struggle for possession. Defeated by Wolfe in 1759 and mortally wounded.

**Montesquieu, Charles Louis de Secondat, Baron de La Brede et de** (1689-1755), French philosopher and author. His works include *Les Lettres Persanes*, a witty satire on contemporary life, and his great work *L'Esprit des Loix*, setting out his ideas on politics and law. Showed a genius for generalisation and gave to history a philosophy. Greatly admired England and her constitution, which he misunderstood, and his influence on the authors of the American constitution consequently led to the impractical separation of the executive (the President) from the law-making power (Congress).

**Montessori, Maria** (1869-1952), M.D., D.Litt., a brilliant educationist. The "Montessori" method she invented for infant education has had wide recognition. (See also Gen. Inf.)

**Monteverdi, Claudio** (1567-1643), an Italian com-

poser of importance by reason of his pioneer work in the operatic form. His most important dramatic work was *Orfeo* (1608).

**Montezuma II.** (1486-1520) was Emperor of Mexico when Cortes invaded that country, and the last Aztec ruler of Mexico.

**Montfort, Simon de, Earl of Leicester** (1206-65) was a powerful baron, with liberal views, and a hatred of kingly tyranny. It was his bold action that forced Henry III., his brother-in-law, to grant the first English Parliament. He met his death at the Battle of Evesham.

**Montgolfier, Joseph Michel** (1740-1810) and **Jacques Etienne** (1745-1799), two French brothers who, during the last twenty years of the 18th century, demonstrated the practicability of a balloon inflated by heated air, making many ascents, and may be said to be the fathers of modern aeronautics.

**Montgomery, Field-Marshal Viscount, K.G., G.C.B., D.S.O.** (b. 1887), rose to military fame as Commander of the 8th Army in the North African and Italian campaigns, 1942-44. C-in-C. British Forces in France and Germany, 1944-46; C.I.G.S., 1946-48. Permanent Military Chairman of the Western Union Defence Committee, 1948-51; Deputy Supreme Commander, NATO, 1951.

**Montrose, James Graham, Marquess of** (1612-50), brave and inspiring Scottish general who raised the Highland clansmen for Charles I. and again for Charles II. His lyric poetry included *My dear and only love*.

**Moody, Dwight Lyman** (1837-99), the American revivalist preacher, associated for many years in mission work on both sides of the Atlantic with Ira D. Sankey, the "American Singing Pilgrim."

**Moore, George** (1852-1933), a well-known Irish novelist; author of *Confessions of a Young Man*, *Esther Waters*, *Evelyn Innes*, etc. Among his later masterpieces were *The Brook Kerith* (1916) and *Heloise and Abelard* (1921).

**Moore, Henry, C.H.** (b. 1898), English sculptor, examples of whose work are to be seen in the Tate Gallery, the V. and A. Museum, and St. Matthew's Church, Northampton.

**Moore, Sir John** (1761-1809), British general, who trained the infantry for the Spanish Peninsular campaigns and conducted a brilliant retreat to Corunna, where he was mortally wounded after defeating the French under Soult.

**Moore, Thomas** (1779-1852), Ireland's greatest poet, the author of *Irish Melodies*, *Lalla Rookh*, *The Epicurean*, and many other works. He enjoyed immense popularity both in England and Ireland. Was the friend and biographer of Lord Byron.

**More, Sir Thomas** (1478-1535), succeeded Wolsey as Lord Chancellor under Henry VIII., but fell into disgrace by refusing to take the oath of Supremacy, and was ultimately executed. His *Utopia* is one of the world's most noted books. Canonised 1935.

**Morgan, Sir Henry** (c. 1635-88), Welsh buccaneer of great skill and daring, who operated in the Caribbean against the Spaniards, capturing and plundering Panama in 1671. Knighted by Charles II and made Deputy-governor of Jamaica.

**Morgan, John Pierpont** (1837-1913), one of the great financiers of his time who built the family fortunes into a vast industrial empire.

**Morland, George** (1763-1804), a painter of English rural life.

**Morley, John, Viscount, O.M.** (1838-1923), Liberal statesman and author, served as Secretary for Ireland in 1886 and 1892-95, and for India, 1905-10. Biographer of Gladstone, Voltaire, Rousseau, Burke, Walpole, Cromwell, and Cobden.

**Morris, William** (1834-96), poet and craftsman. His hatred of 19th-cent. ugliness, his belief in human equality, and in freedom and happiness for all, conspired to make him a socialist, and he accomplished much for the improvement of domestic decoration. He was a popular lecturer, founded the Socialist League and the Kilmecott Press.

**Morrison, Rt. Hon. Herbert Stanley, C.H., M.P.** (b. 1888), entered Parliament as Labour M.P. for South Hackney in 1923. Leader of the L.C.C. 1933-40. Joined the Coalition Government in 1940 and was member of the war cabinet. Dep. Prime Min. and Leader of the House of

- Commons in the Labour administration, 1945-51. His book *Government and Parliament* (1954) is an authority on the British constitution.
- Morse, Samuel Finley Breese** (1791-1872), an American artist and designer, who became the inventor of the Morse system of electric telegraphs, and of the Morse code of signals.
- Mountbatten of Burma, Admiral Earl, P.C., K.G., G.C.B., G.C.V.O., D.S.O.** (b. 1900), naval officer and statesman. At the beginning of the second world war he was a captain in command of a destroyer flotilla, served with distinction at sea until 1942 when he was made Chief of Combined Operations. In 1945 he was appointed Allied Supreme Commander, South-East Asia Command. As last Viceroy of India he carried through the transfer of power into Indian hands in 1947 and was the first Governor-General of the new Dominion of India. Resuming his naval career in 1948 he has served successively as Flag Officer Commanding the 1st Cruiser Squadron, Mediterranean, Fourth Sea Lord, C-in-C. Mediterranean, C-in-C. Allied Forces, Mediterranean, and First Sea Lord and Chief of Naval Staff, 1955.
- Mountevans, Admiral Lord, K.C.B., D.S.O.** (b. 1881), "Evans of the Broke," British sailor and explorer. Author of *South with Scott*.
- Moussorgsky, Modeste Petrovitch** (1835-81), Russian composer whose chief work, the opera *Boris Godounov*, was first performed in 1874, and first heard in England, in a revised version by his life-long friend Rimsky-Korsakov, in 1913.
- Mozart, Wolfgang Amadeus** (1756-91). The composer who bears this immortal name is universally acknowledged as the world's greatest musical genius. He was born at Salzburg, began his musical career at the age of four, toured the European courts as an infant prodigy, left the service of the Archbishop of Salzburg in his twenty-sixth year to live in Vienna, where his friendship with Haydn began and where his greatest music was written. Mozart's genius lies in the effortless outpouring of all forms of music, in the ever-flowing melodies, in the consistent beauty and symmetry of his compositions, and in the exactness of his method. Among the loveliest and grandest works in instrumental music are his three great symphonies in E flat, in G minor, and in C (called the "Jupiter"), all written in six weeks in 1788. Three of the greatest operas in musical history are his *Marriage of Figaro* (1786), *Don Giovanni* (1787), and *The Magic Flute* (1791). His last composition, written under the shadow of death, was the *Requiem Mass*, a work of tragic beauty. He died in direst poverty in his thirty-sixth year.
- Müller, Ferdinand von, Baron** (1825-96), German botanist and explorer. Director of the Botanical Gardens at Melbourne, 1857-73. Introduced the eucalyptus into the south of Europe and other regions, and took leading part in promoting Australian exploration.
- Munkacsy, Michael von** (1844-1900), a celebrated Hungarian painter of historical subjects.
- Munnings, Sir Alfred James, K.C.V.O., P.R.A.** (b. 1878), a distinguished British painter whose country scenes and pictures of horses have gained him world-wide fame. Pres. of the Royal Academy from March 1944 to Dec. 1949.
- Murdoch, William** (1754-1839), a distinguished engineer and inventor. He was one of the first to introduce gas lighting.
- Murillo, Bartolome Esteban** (1617-82), one of the greatest Spanish painters. His chief works are altar-pieces and religious subjects.
- Murray, Prof. (George) Gilbert (Aime), O.M., M.A., D.Litt., LL.D.** (b. 1866), scholar and humanist historian of Greek literature and translator of Euripides, Regius Professor of Greek, Oxford University, 1908-36, Chairman of the League of Nations Union, 1923-38.
- Mussolini, Benito** (1883-1945), Fascist dictator of Italy from October 1922 until July 1943. From 1935 an aggressive foreign policy in Abyssinia, Spain, etc., was at first successful, and in June 1940, he entered the second world war on the side of Germany. The defeat of Italian arms in North Africa and the invasion of Sicily caused the collapse of his Government, but he was rescued from imprisonment by parachutists. Executed two years later by partisans.
- Nansen, Fridtjof, G.C.V.O., D.Sc., F.R.G.S.** (1861-1930), the Norwegian explorer who, after two or three expeditions across Greenland, in 1893 started out on his famous North Polar expedition when he reached the highest latitude until then attained—86° 14'—a feat since eclipsed by the Duke of the Abruzzi and by Peary, as well as by airship or aeroplane. He published a fascinating narrative of his exploration under the title of *Farthest North*. Active in Russian famine relief, 1921. Awarded Nobel Prize for Peace, 1922.
- Napier, John** (1550-1617), mathematician, who made important contribution to the advance of astronomy and other branches of science by his invention of logarithms (published 1614).
- Napoleon I. (Bonaparte)** (1769-1821) was born at Ajaccio in Corsica. Sent to France to receive a military education and was a captain at the age of twenty. In 1794 served in Italy with such distinction that he won a generalship, and next year was appointed Commander-in-Chief. A series of most brilliant successes followed. He defeated the Austrian forces in 1797, conducted an expedition to Syria and Egypt in 1798, returned in 1799 to find himself the most popular man in France, and in November of that year he proclaimed himself First Consul. In 1800 he was again in Italy and once more victorious. In 1804 he was made Emperor, and the following year was in the field against England, Russia, and Austria, achieving a splendid series of victories at Austerlitz and elsewhere, and practically became Dictator of Europe, distributing kingships amongst his brothers in the most profuse manner, Joseph becoming King of Naples, Louis King of Holland, and Jerome King of Westphalia. His invasion of Russia was disastrous, the Peninsular War went against him, and in 1814 the Allies entered Paris and forced him to abdicate. He was sent to Elba, but made his escape in the following year, gathered his old army about him and went forth to meet the English and Prussian armies. He was finally completely defeated at Waterloo on the 18th June, 1815, and exiled to St. Helena, where he died six years later. His remains were removed to Paris in 1840, and rest in a magnificent tomb.
- Napoleon II.** (1811-32) was the son of Napoleon I. and Maria Louisa. Was born in Paris and proclaimed King of Rome, but died of consumption when only twenty-one, being known at the time of his demise as the Duke of Reichstadt.
- Napoleon III.** (1808-73) was the son of Louis Bonaparte, King of Holland, and of Hortense, daughter of the Empress Josephine. After unsuccessful attempts to secure the French throne and years of imprisonment he took advantage of the revolution of 1848 to return to France and, following the famous *coup d'état* of December 2, 1851, emerged as master of France and was proclaimed Emperor the following year. Married Eugenie de Montijo in 1853. Dictatorial and discredited at home, unsuccessful in his foreign adventures, his surrender at Sedan in the Franco-Prussian war of 1870 brought ruin to the Second Empire, and France once again became a republic. Louis Napoleon took refuge in England and died at Chislehurst in Kent.
- Nash, John** (1752-1835), architect. Planned Regent Street, laid out Regent's Park, enlarged Buckingham Palace, and designed Marble Arch and the Brighton Pavilion.
- Nash, Paul** (1889-1946), distinguished English painter and designer. Official war artist in both world wars. Best known pictures *The Menin Road* of 1918 and *Totes Meer* of 1941.
- Nasmyth, James** (1808-90), the inventor of the steam-hammer, which became indispensable in all large iron and engineering works.
- Nasser, Lt.-Col. Gamal Abdul** (b. 1917), Egyptian Premier under whose leadership the Egyptian revolution is taking shape.
- Naguib, General Mohammed** (b. 1900), Egyptian army officer, whose military *coup* in 1952 brought the abdication of King Farouk. Deposed as President of Egypt in 1954.
- Nehru, Pandit Jawaharlal** (b. 1889), Indian statesman and one of the world's great leaders; Prime Min. and Min. of Foreign Affairs since

1947. Educated at Harrow and Cambridge where he studied science and law. A leading member of the Congress Party for many years, during which he was frequently imprisoned for his political activities. Played distinguished part in the final negotiations for the independence of India. As a believer in non-violence and non-interference with other countries, has had notable success as a peacemaker in Korea and Indo-China.
- Nelson, Horatio, Viscount, K.C.B.** (1758-1805), the great English naval commander; son of a Norfolk clergyman. Went to sea at twelve years of age, and was post-captain at twenty-one. In 1793 he was captain of the *Agamemnon* and proved his capacity and daring against the French. He lost his right eye at the siege of Calvi in 1794, and his right arm at the siege of Santa Cruz in 1797. In 1798 he achieved a great victory over the French in Aboukir Bay, in recognition of which he was created a Baron and granted a pension of £2,000 a year. He was victorious at Copenhagen in 1801, after which he was promoted to the rank of Viscount. In 1805 occurred the Battle of Trafalgar, in which the French fleet was destroyed and Nelson was killed. He was buried in St. Paul's Cathedral.
- Nenni, Pietro** (b. 1883), Italian politician and Secretary-General of the Italian Socialist Party since 1944. Minister of Foreign Affairs, 1946-47.
- Nernst, Walther Hermann** (1864-1941), German scientist who established the third law of thermodynamics. Nobel Prizeman, 1920.
- Nero, Claudius Caesar** (A.D. 37-68), the notorious Roman Emperor, whose reign of fourteen years was rendered infamous by his cruelty and licentiousness.
- Newall, Marshal of the R.A.F. Lord, G.C.B., O.M.** (b. 1886), Chief of the Air Staff, 1937-40. Gov.-Gen. of New Zealand, 1941-46.
- Newbolt, Sir Henry John, C.H., M.A., D.Litt.** (1862-1938), Professor of Poetry (1911-21), and Member of Academic Committee of the Royal Society of Literature, author of some of the best sea poems of recent times and especially successful in his poems on the War. Official Naval Historian, 1923.
- Newcomen, Thomas** (1663-1729), was one of the first to put a steam-engine into practical operation, and in 1705 patented his invention, which was the pumping-engine used in Cornish mines until the adoption of Watt's engine.
- Newman, Ernest** (b. 1863), English music critic and author who has been music critic to the *Manchester Guardian*, *Birmingham Post*, and since 1919 to the *Sunday Times*. He has written many books including studies of Elgar, Beethoven, Richard Strauss, Gluck, Liszt, and a 4-vol. life of Wagner; he has also translated many of the Wagner libretti and certain standard books on music.
- Newman, John Henry, Cardinal** (1801-90). Educated at Oxford, he was incumbent of St. Mary's there from 1828 to 1843, taking an active part in the religious discussions of the time, gradually showing a tendency to adopt Roman Catholic views, and ultimately allying himself with the Romanists, resigning his living and settling at Edgbaston, Birmingham, as the head of a community of the Order of St. Philip Neri. Here he remained for the rest of his career, devoting himself to an almost monastic life, but from time to time employing his pen in the production of religious works, displaying great controversial power, beauty of thought, and charm of style. In his *Apologia pro Vita Sua* he described the development of his religious thought. The beautiful hymn *Lead, kindly Light*, and the *Dream of Gerontius* were written by him.
- Newton, Sir Isaac, F.R.S.** (1642-1727), generally acknowledged as the world's greatest man of science. Achieved immortal fame for his work on the nature of white light, the calculus and gravitation. Greatest published work, the *Principia*, was produced in 1687, revolutionising the scientific thought of his time. Was Member of Parliament for Cambridge in 1688, Master of the Mint in 1699, and President of the Royal Society from 1703 till his death. Honoured with knighthood in 1705.
- Ney, Marshal Michel** (1769-1815), was one of Napoleon's most noteworthy generals.
- Nicholas II., Ex-Czar of Russia** (1868-1918), son of the Emperor Alexander III. Came to the throne in 1894, and had a reign full of trouble, being unable to handle the difficulties by which he was beset. He avowed full harmony with the British and French in the war which opened in 1914, but the acts of the Empress and Court belied these pretensions, and a Revolution resulted in March, 1917, which overthrew the Romanoffs. Nicholas was detained a prisoner together with the Czarina and his children: all were probably shot on July 16, 1918.
- Nicholas, St., Bishop of Myra and patron saint of Russia**, flourished in the 4th century, and is popularly associated with Christmas under the corrupted name of Santa Claus.
- Nicholson, Sir William** (1872-1949), English painter, well known for his portraits, engravings and woodcuts as well as for his illustrations in the *Almanack of Twelve Sports* (with Kipling) and *London Types* (with Henley). His son, Ben Nicholson (b. 1894), also an artist, is noted for his abstract paintings.
- Nicolson, Hon. Sir Harold, K.C.V.O., C.M.G.** (b. 1886), author and critic, is a contributor to *The Observer* and has written many books, including *The Congress of Vienna* (1946) and *King George V: His Life and Reign* (1952). Served in the Diplomatic Service, 1909-29, attending the 1919 Peace Conference; was National Labour M.P., 1935-45, and joined the Labour Party in 1947. Married to the Hon. Victoria Sackville-West (b. 1892), the novelist and poet.
- Niemöller, Martin** (b. 1892), German religious leader. A pastor in the Evangelical (Protestant) Church. Actively opposed the Nazification of the German Church and was incarcerated in a concentration camp throughout the second world war.
- Nietzsche, Friedrich Wilhelm** (1844-1900), German philosopher, in his younger years greatly influenced by the work of Wagner and Schopenhauer. His "superman" philosophy is eloquently expressed in his many writings, i.e., *Thus spake Zarathustra*, *Beyond Good and Evil*, *The Will to Power*.
- Nightingale, Florence, O.M.** (1820-1910), English nurse and pioneer of hospital reform whose genius for administration was shown during the Crimean War, when she organised in face of considerable official opposition a nursing service to relieve the sufferings of the British soldiers who called her "The Lady with the Lamp." Her system was adopted and developed in all parts of the world, and she was honoured with a testimonial of £50,000, which she applied to the founding of the Nightingale Training School for Nurses, attached to St. Thomas's Hospital, London.
- Nijinsky, Vaslav** (1892-1950), Russian dancer, who was one of the famous company of dancers, which included Pavlova, Karsavina and Fokine, brought by Diaghilev to Paris and London just before the War of 1914-18, and was in some respects the most remarkable of them all. His sensational dancing in such Ballets as *Les Sylphides*, *Spectre de la Rose* and *Après-Midi d'un Faune* won him the supreme place among male dancers.
- Nikisch, Arthur** (1855-1922), famous Hungarian conductor, who appeared as a prodigy pianist at the age of eight, became chief conductor at the Leipzig Opera, 1879, conducted the Symphony Orchestra at Boston, 1889-93, afterwards paying visits to all the important cities of Europe, where he was acclaimed for his brilliance. So extraordinary was his influence over the players that he was accused of mesmerising them.
- Nimitz, Admiral of the Fleet Chester William** (b. 1885), commanded the American fleet in the Pacific, 1941-45, together with army and marine forces. Chief of Naval Operations, 1945-47.
- Nobel, Dr. Alfred Bernhard** (1833-96), the inventor of dynamite, was a Swedish engineer and chemist who amassed a large fortune from the manufacture of explosives, a great portion of which at his death in 1896 he set apart as a fund for annual prizes to such persons as during each year shall have contributed most materially to the benefit of mankind. There are five of these prizes, and they are given in the following departments: physics, chemistry, physiology or medicine, literature, and peace.

**Norrie, Lieut.-Gen. Sir (Charles) Willoughby (Moke), K.C.M.G., C.B., D.S.O., M.C.** (b. 1893). Gov.-Gen. of New Zealand, 1952; Governor South Australia, 1944-52. Professional cavalry officer.

**Northcliffe, 1st Viscount (1865-1922)**, was one of the most prominent men in modern journalism. Started *Answers* in 1883 with his brother, Cecil Harmsworth. In 1894 the Harmsworths purchased the *Evening News*, and in 1896 they started the *Daily Mail*. In 1917 was special British representative in the United States.

**Northumberland, John Dudley, Duke of (1502-53)**, an expert intriguer who dominated the Government of Edward VI. from 1549 onwards and attempted to maintain his influence when the king died by proclaiming as Queen his daughter-in-law, Lady Jane Grey, but failed and was executed.

**Nostradamus or Michel de Notre Dame (1503-66)**, French astrologer who acquired great distinction by his labours during the plague. Publ. in 1555 *Centuries*, a book of rhymed prophecies, the fulfilment of some of which greatly added to his reputation. *Centuries* was condemned by the papal court of 1781.

**Novalis, the pseudonym of Baron Friedrich von Hardenberg (1772-1801)**, a Saxon poet and novelist. A pioneer of the Romantic Movement.

**Novello, Ivor (1893-1951)**, Welsh actor, songwriter, and composer of musical comedies including *The Dancing Years* and *Perchance to Dream*. His song *Keep the Home Fires Burning* was extremely popular during the first world war.

**Noyes, Alfred, C.B.E., LL.D., Litt.D.** (b. 1880), English poet, whose first book of verse, *The Loom of Years*, was published in 1902. Visiting Prof. of English Literature at Princeton Univ., 1914-23.

**Nuffield, Viscount, G.B.E.** (b. 1877), industrialist and philanthropist and until he retired in 1952 Chairman of Morris Motors, Ltd. Established the Nuffield Foundation, endowing it with £10 million, and provided large sums for the advancement of medicine in the University of Oxford.

**Numa Pompilius** was, according to tradition, the second King of Rome and the founder of Roman Ceremonial Law.

**O**

**Oaksey, Geoffrey Lawrence, 1st Baron, P.C., Q.C., D.S.O.** (b. 1880), presided over the International Military Tribunal which tried the major war criminals at Nuremberg, 1945-46. A Lord of Appeal in Ordinary since 1947.

**Oates, Captain Lawrence Edward Grace (1880-1912)**, a British explorer who, having seen active service in the South African War, joined Capt. Scott's Antarctic Expedition in 1910. He was one of the sledge party who accompanied Scott in his final dash for the South Pole. On returning, the party became stormbound, and on March 17, 1912, Oates crippled by frost-bite, went out in the blizzard to die rather than be a burden to his starving comrades. Described in Scott's diary as a very gallant gentleman.

**Oates, Titus (1649-1705)**, a notorious informer against Roman Catholics in the reign of Charles II.

**O'Casey, Sean (b. 1883)**, Irish dramatist of remarkable powers whose plays include *Junio and the Paycock*, *The Silver Tassie*, *Red Roses for Me*, and *Oak Leaves and Lavender*.

**O'Connell, Daniel (1775-1847)**, the Irish "Liberator," as he was called, was a famous orator and politician and a highly successful barrister. In Parliament he advocated the cause of Ireland with courage and audacity.

**O'Connor, Feargus (1796-1855)**, was an Irish lawyer who became the most influential figure in the Chartist movement.

**O'Connor, Rt. Hon. Thomas Power (1848-1929)**, sat in Parliament from 1880 until 1929, being for many years father of the house, and was one of the most successful journalists and editors of his time. He founded several publications including the *Star* and originated the "Book of the Week" idea.

**Oersted, Hans Christian (1777-1851)**, the Danish philosopher and scientist, whose discoveries in

electrical research did much to help forward the invention of the electric telegraph.

**Offa** was King of Mercia from circa 757 to 796, and had a war-like career; he built an embankment from the Dee to the Wye, 100 miles long, which was called Offa's Dyke. He imposed "Peter's Pence" as a gift to the Pope for absolution.

**Offenbach, Jacques (1819-80)**, French composer, born of a Jewish family at Cologne. Was the composer of many light operas, including the posthumous *Les Contes d'Hoffmann (Tales of Hoffmann)*, the most popular of all his works.

**Ohm, Georg Simon (1787-1854)**, was the discoverer of the law of the theory of the voltaic current which is known as Ohm's Law. He was a native of Bavaria, and gained much fame as a physicist and mathematician.

**O'Kelly, Sean T. (b. 1882)**, Pres. of Republic of Ireland since 1945.

**Olivier, Sir Laurence Kerr (b. 1907)**, British actor and producer, has appeared with great success in many Shakespearian and other roles. Played in the films of *Wuthering Heights*, *Rebecca*, *Pride and Prejudice*, *49th Parallel*, *Henry V.*, and *Hamlet*. His wife is Vivien Leigh, stage and film actress.

**Oman, Sir Charles (William Chadwick), K.B.E.** (1860-1946), English historian who was Chichele Professor of Modern History at Oxford, 1905-46 and M.P. for the University from 1919 to 1935. His works include a popular *History of Greece*, *A Short History of England*, which is a familiar school book, and a *History of the Art of War in the Middle Ages*.

**Omar I. (581-644)** was second Caliph of the Mohammedans, and the first to be designated the Commander of the Faithful. He conquered Syria, Mesopotamia, Persia, Egypt, and Palestine, reigned from 634-644, and died at the hands of a slave.

**Omar Khayyám (d. c. 1123)** flourished in the 11th and 12th centuries. Was the great Persian poet whose *Rubaiyat* was made known to English readers by Edward FitzGerald in 1859.

**O'Neill, Eugene Gladstone (1888-1953)**, an American playwright who, after spending his adventurous youth in such activities as sailing, gold-prospecting, and journalism, first won success in 1914 with the one-act play, *Thirst*. His later plays include *Beyond the Horizon*, *Anna Christie*, *Strange Interlude*, and *Mourning Becomes Electra*. His daughter Oona is the wife of Charles Chaplin.

**Opie, John, R.A. (1761-1807)**, a celebrated English painter whose historical pictures were highly valued in his day.

**Orchardson, Sir William Quiller (1835-1910)**, was an eminent R.A. whose subject pictures and portraits gained him a high reputation. Among his best-known works were *Napoleon I. on board H.M.S. Bellerophon* and *Ophelia*.

**Orpen, Sir William, K.B.E., R.A.** (1878-1981), an eminent British portrait-painter; many of his celebrated war pictures were presented to the nation.

**Osler, Sir William, Bt., M.D., F.R.S.** (1849-1919), British physician, born in Canada, was an authority on diseases of the blood and spleen, and wrote on nearly every branch of medicine, his works including *Principles and Practice of Medicine*, and the *Evolution of Modern Medicine*.

**Oswald, St., King of Northumbria** from 625 to 642, established Christianity amongst his subjects.

**"Ouida" (Mlle. Marie Louise de la Ramée) (1839-1908)**, an English novelist, born at Bury St. Edmunds of French extraction, whose works have been highly popular.

**Otto, Nikolaus August (1832-91)**, German engineer and inventor of the four-stroke cycle that bears his name.

**Otto the Great, (912-973)**, son of Henry the Fowler, crowned King of the Germans in 936 and Emperor in 962. Overawed the papacy, checked the barbarian invasions, founded the East Mark (Austria), and considerably consolidated Germany.

**Ovid (43 B.C.-A.D. 18)**, the famous Latin poet (Publius Ovidius Naso) whose *Metamorphoses* and *Art of Love* are among the best-known examples of Roman literature of the lighter kind.

**Owen, Sir Richard, K.C.B., F.R.S.** (1804-92), was reckoned by many the greatest palaeontologist since Cuvier.

**Owen, Robert (1771-1858)**, socialist and philan-

thropist, devoted his life and fortune to the carrying out of his theories, and established socialistic colonies in Lanarkshire, Hampshire and America.

## P

**Pachmann, Vladimir de** (1848-1923), Russian pianist, an unrivalled interpreter of the works of Chopin.

**Paderewski, Ignace Jan** (1860-1941), himself no mean composer, by his superb technique and masterly interpretation achieved unrivalled fame as a pianist. For half a century he longed and worked for the freedom of his native Poland, and in 1919 he became her first Prime Minister. He later resumed his musical career and died in exile during the second world war.

**Paganini, Niccolò** (1782-1840), a famous violinist and one of the most expert performers on that instrument who ever lived.

**Paine, Thomas** (1737-1809), English revolutionary author, lived, wrote and held a number of positions in America from 1774 to 1787. Wrote his famous *Rights of Man* as a reply to Burke's *Reflections on the Revolution in France*. It had an enormous circulation, but the Government prosecuted him for alleged sedition, and he fled to France. In 1793 he published the *Age of Reason*.

**Palestrina, Giovanni** (1525-94), a distinguished Italian musical composer, chiefly of Church music.

**Palgrave, Sir Francis** (1788-1861), a much-esteemed historian, who wrote *The Rise and Progress of the English Commonwealth*, *A History of Normandy*, and *A History of the Anglo-Saxons*. He was knighted in 1832. His son, Francis Turner Palgrave (1824-97), was a poet of devotional instincts, who was Professor of Poetry at Oxford, and edited the much-esteemed *Golden Treasury*. Another son, William Gifford Palgrave (1828-88), was a traveller, diplomatist, and prose writer of considerable ability.

**Palissy, Bernard** (circa 1510-89), a distinguished French potter, who after years of struggle and self-denial discovered the art of producing white enamel, after which he became famous and set up a porcelain factory in Paris, which was patronised by Royalty.

**Palladio, Andrea** (1518-80), the great Italian architect, who introduced the style of architecture known as Palladian.

**Palmer, John** (1742-1818), originator of the mail-coach postal service in 1784.

**Palmerston, Henry John Temple, 3rd Viscount** (1784-1865), English statesman, was long dominant in European affairs because of his vigorous and popular policy. He spent many years of his life in office, serving as Tory Secretary for War from 1808 till 1823, as Foreign Secretary in all the Whig cabinets between 1830 and 1851, and as Prime Minister in 1855 and from 1859 until his death. He had a lofty conception of the strength and duties of England and was the irreconcilable foe of oppression and injustice.

**Pancras, St.**, the patron saint of children, was the son of a Roman noble, was baptised in Rome in the reign of Diocletian, where he was put to death at the age of fourteen for refusing to renounce Christianity.

**Pandit, Vijaya Lakshmi** (b. 1900), Indian High Commissioner in London, 1954- . India's first Ambassador to the Soviet Union (1947-49) and to the United States (1949-51), the first woman to be elected Pres. of the United Nations General Assembly (1954) and to be head of a diplomatic mission in London. Sister of Jawaharlal Nehru.

**Panizzi, Sir Anthony, K.C.B.** (1797-1879), an Italian political exile, who in 1831 was appointed to the Assistant Librarianship and Keepership of the Printed Books of the British Museum. In 1856 he became Principal Librarian, retiring in 1866. The great Reading Room was constructed from his designs.

**Pankhurst, Emmeline** (1858-1928) was a prominent and indefatigable worker for women's suffrage, together with her daughters Dame Christabel and Sylvia.

**Papin, Denis** (1647-1714), a French mathematician and scientist who settled in England. He invented the condensing pump, and was the

first to use a safety valve. His discoveries in connection with steam-power entitle him to be reckoned amongst the first to put that power to any practical test.

**Paracelsus, or Philippus Aureolus Theophrastus Bombastus von Hohenheim** (1493-1541), was a famous Swiss mystic and alchemist. He made numerous important discoveries, being the first to employ laudanum and antimony in pharmacy.

**Park, Mungo** (1771-1806), a famous British traveller who in 1799 published an account of his *Travels in the Interior of Africa*, a work which caused a considerable sensation and was highly popular.

**Parker, Rev. Joseph** (1830-1902), a popular Non-conformist preacher and author who built the City Temple, and ministered there up to the time of his death.

**Parnell, Charles Stewart** (1846-91), the Irish politician, as leader of the Nationalist Party made it more powerful than it had ever been and successfully enlisted the support of Gladstone for the policy of Home Rule. Accused by *The Times* of complicity in the crimes of the Land League on the basis of letters forged by Richard Pigott, he was completely vindicated by a Royal Commission and awarded heavy damages. Was dropped from the leadership of his party following the O'Shea divorce proceedings and died soon afterwards.

**Parry, Rear-Admiral Sir William Edward** (1790-1855), an Arctic explorer and naval commander of great distinction, who undertook several expeditions to the Polar regions and made numerous important discoveries.

**Parsons, Hon. Sir Charles Algernon, O.M., K.C.B., F.R.S.** (1854-1931), was head of the electrical and engineering works of C. A. Parsons and Co., and of the Parsons Marine Steam Turbine Co., Ltd., Newcastle-on-Tyne, and inventor of the steam turbine which has effected a remarkable improvement in the propulsion of war and mercantile vessels.

**Partridge, Sir Bernard** (1861-1945), began life as a stained glass designer, afterwards worked at book illustrations, and for a time was on the stage. Joined *Punch* staff 1891, and for many years was its principal cartoonist.

**Pascal, Blaise** (1623-62), a noted French philosopher whose *Provincial Letters* exhibit remarkable wit and genius. A distinguished mathematician, he invented an ingenious arithmetical machine, besides making many brilliant experiments in hydrostatics and pneumatics.

**Pasternak, Boris Leonidovich** (b. 1895), the greatest living poet in Russia.

**Pasteur, Louis** (1822-95), French chemist, whose work was inspired by an interest in the chemistry of life which abided with him until his death. His researches on fermentation led to the science of bacteriology and his investigations into infectious diseases and their prevention to the science of immunology. The pathological bacteriological import of Pasteur's researches came about mainly through his disciples (Lister, Roux, and others) and not directly, though all founded on his early non-medical investigations on organisms of fermentation, etc., which were of great importance in industry, and fundamental. He spent most of his life as administrator and director of scientific studies at the École Normale at Paris, where he was appointed in 1857. The Institut Pasteur was founded in 1888.

**Pattmore, Coventry** (1823-96), poet of the Victorian era, and author of *The Angel in the House*.

**Paton, Sir (Joseph) Noel, R.S.A., LL.D.** (1821-1901), sculptor, historical artist, archaeologist, and poet.

**Patrick, St. (c. 387-c. 463)**, the patron saint and Apostle of Ireland, was for many years a great and successful Christian missionary in that country. Few authentic facts about his life are known, but many miraculous stories, such as his alleged extermination of serpents in the island, have been associated with him.

**Patti, Adelina Juana Maria** (Baroness Cederström) (1843-1919), Italian soprano singer, was born in Madrid. Her marvellous voice and brilliant execution made her immediately famous.

**Pattison, Dorothy Wyndlow** (1832-78), a sister of Mark Pattison, who devoted a great part of her

- life to hospital work in Walsall, where, as "Sister Dora," she is revered for her saintly life and devotion to the sick poor.
- Pattison, Mark** (1813-84), scholar and critic, rector of Lincoln College, Oxford. His wife was Emilia Francis Strong (afterwards Lady Dilke), well known as a French art historian and for her work in promoting trade unionism among women workers.
- Pavlov, Prof. Ivan Petrovich** (1849-1936), an eminent Russian physiologist: Director of the Physiological Institute. Foreign member of the Royal Society and Nobel Prize-winner.
- Pavlova, Anna** (1885-1931), a Russian ballet dancer, who by her genius became world-renowned.
- Peabody, George** (1795-1869), an American merchant who lived for the greater part of his life in London, and, acquiring a large fortune, bequeathed immense sums for philanthropic purposes in England and the United States.
- Peacock, Thomas Love** (1785-1866), English satirist, whose novels include *Headlong Hall* and *Nightmare Abbey*, and who will always rank high in English literature for the wit and grace of his style.
- Pearson, Sir Cyril Arthur, Bt.** (1866-1921), journalist and newspaper proprietor, who founded *Pearson's Weekly*, *The Daily Express*, and other publications. Later retired from business because of blindness and devoted himself to the welfare of other blind people, particularly ex-servicemen, being the founder of St. Dunstan's.
- Pearson, Lester Bowles, O.B.E., M.A.** (b. 1897), Canada's Secretary of State for External Affairs.
- Pearry, Rear-Admiral Robert Edwin** (1856-1920), an American Arctic explorer who, in 1891-92, conducted a sledging expedition towards the Pole. In 1893, 1895, and 1898 was again in the Arctic regions; and in 1900-02 reached the highest latitude hitherto attained. In the spring of 1906 he touched 87 degs. 6 min. N. latitude. On April 6, 1909, making the journey by sledge over sea-ice and accompanied by only his native servant, he succeeded in reaching the Pole.
- Peel, Rt. Hon. Sir Robert, 2nd Bt.** (1788-1850), a prominent British statesman who entered Parliament at twenty-one years of age, and immediately exhibited great capacity, being appointed Under-Secretary for the Colonies in the following year. From 1812 to 1818 he was Secretary for Ireland; and in 1822 he became Home Secretary, introducing, whilst fulfilling that office, the new police service associated with his name. In 1834, Peel was for four months Prime Minister, and in 1841 again occupied the same exalted position. It was then that the Anti-Corn Law agitation became formidable, and Peel abandoned his former Protectionist attitude, and carried his Repeal measure eventually in 1846. He was thrown from his horse in Hyde Park on June 25th, 1850, and succumbed to his injuries three days later.
- Penfield, Wilder Graves, O.M., M.A., D.Sc.** (b. 1890), brain surgeon. Dir. Montreal Neurological Inst., Prof. of Neuro-Surgery in Univ. of McGill.
- Penn, William** (1644-1718), became a Quaker, and wrote some powerful pamphlets supporting his new faith. He devoted himself to good works, and in 1682, having obtained a special grant from King Charles II., went to America and founded Pennsylvania.
- Penney, Sir William George, K.B.E., D.Sc., Ph.D., F.R.S.** (b. 1909), Director of the Atomic Research Establishment, Aldermaston, Berkshire; responsible for the design of the British atom bomb and in charge of the technical side of the tests at Monte Belle Is. (1952) and Woomera (1953).
- Pepys, Samuel, F.R.S.** (1633-1703), naval administrator, sometimes called the "Father of the British Civil Service." The *Diary* was written while he was a comparatively young man and is a unique revelation of a man and his age, besides including eye-witness descriptions of the Great Plague and Fire of London.
- Perciles** (590-429 B.C.), the distinguished Athenian statesman, general, and orator, who raised Athens to the point of its fullest prosperity.
- Perkin, Sir William Henry, F.R.S., D.Sc.** (1838-1907), discoverer of the mauve dye-stuff, and founder of the industry in coal-tar colours.
- Perkin, William Henry (junior)** (1860-1929), foremost organic chemist of his day; Professor of Organic Chemistry at Manchester University, 1892-1912 and later at Oxford. His researches led to important industrial results.
- Persius Flaccus, Aulus** (A.D. 34-62), a famous Stoic philosopher.
- Perugino, Pietro** (1446-1524), a great Italian artist, excelling in religious subjects, and the painter of numerous fine frescoes including some in the Sistine Chapel at Rome. Raphael was his pupil.
- Pestalozzi, Johann Heinrich** (1746-1827), was a rich Swiss reformer and writer, who devoted his fortune to benevolent works, especially in connection with the education of poor children.
- Pétain, Marshal Henri Philippe** (1856-1951), became a French national hero after the successful defence of Verdun in 1916 and was made C.-in-C. of all the French armies. In 1940 he became Prime Minister, signed an armistice with Germany, and set up a quasi-independent administration at Vichy. In 1945 he was sentenced to death for treason, the sentence being commuted to life imprisonment.
- Peter I, called The Great** (1672-1725). Czar of Russia, showed great ability and energy of character, devoting himself largely to the reorganisation of his army and navy. He spent some months at Deptford studying shipbuilding. He founded St. Petersburg (1703), which was his "window on to Europe," and gained control in the war with Sweden of Karelia, Ingermanland, and Livonia. Among the prisoners taken by him at the Battle of Poltava (1709) was Catherine Skavronsky, daughter of a Lithuanian peasant, whom he later married. By her care and understanding she did much to strengthen his power. Peter died without naming an heir, and Catherine became Empress of Russia (1725-27).
- Peter, the Hermit** (c. 1050-1115), was the main instrument of the agitation which brought about the first Crusade. He was a French monk, of great eloquence and earnestness, and lived to see Jerusalem in the hands of the Christians.
- Petrarch, Francesco** (1304-74), Italian poet and scholar, whose odes and sonnets *To Laura* are unmatched for their lyrical beauty and passion.
- Petrie, Sir (William Matthew) Flinders, F.R.S.** (1853-1942), British Egyptologist who became interested in archaeological research at a very early age. He carried out excavations in Britain (1875-90), Egypt (1880-1924), and Palestine (1927-38), and wrote many books on the prehistoric civilisation of Egypt. Edwards Professor of Egyptology at University College, London, 1893-1935.
- Phidias, the greatest of Greek sculptors**, flourished from about 500 to 432 B.C., was specially famous for his work in gold, ivory and bronze. Nothing now remains to attest his genius except the sculptures in the British Museum, widely known as the *Elgin Marbles*.
- Philip II. of France** (1180-1223), was a prominent figure in the third Crusade, in which for a time he associated himself with our Richard I. Victor over a strong coalition at the momentous battle of Bouvines in 1214.
- Philip II. of Macedonia** (382-336 B.C.), trained in military arts in Greece, when he came to the throne instilled martial ideas into his subjects, and entered upon a career of conquest that did not end until he had become master of Greece. Father of Alexander the Great.
- Philip II. of Spain** (1527-98), succeeded his father the Emperor Charles V. in half his dominions. The Revolt of the Netherlands, the annexation of Portugal in 1580, and the unsuccessful attempt to subdue England by the Armada, were outstanding events of his troubled reign. He was a devout Roman Catholic, strongly supported the Counter-Reformation, built the strange Escorial, and was four times married, his second wife being Mary Tudor.
- Philip V. of Spain** (1683-1746) founded the Bourbon dynasty in Spain, and was the son of the Dauphin of Louis XIV. and Maria Theresa of Spain. His uncle, Charles II. of Spain, bequeathed the kingdom to him, and this led to the war of the Spanish Succession, which ultimately confirmed him in his kingship.
- Phillips, Stephen** (1868-1915), dramatist and poet

- of distinction. Wrote popular verse dramas, including *Paolo and Francesca*, *Herod*, and *Ulysses*.
- Piasts**, first Polish dynasty in Poland until 14th century and until 17th century in Silesia.
- Piazzi, Giuseppe** (1746-1826), an Italian astronomer. He was the discoverer of the planet Ceres, the first known of the asteroids.
- Picasso, Pablo Ruiz** (b. 1881), Spanish painter who received his early training in Catalonia and settled in Paris in 1903. His influence over contemporary art is comparable with that exercised by Cezanne (*q.v.*) over the artists of his time. His work is to be found in public galleries and private collections all over the world and is represented by *Femme Nue dans un Fauteuil Rouge* in the Tate Gallery. His genius has also found scope in sculpture and etchings and he has designed decor costumes for the ballet.
- Picard, August** (b. 1884), Swiss physicist, professor of physics at Brussels until the German invasion in 1940. Noted for his ascents into the stratosphere by a special balloon in 1931 and 1932 and for his more recent attempts to study deep-sea life.
- Pickford, Mary** (b. 1893), was the leading film actress of the silent days and affectionately known as "the world's sweetheart."
- Pilsudski, Marshal Joseph Clemens** (1867-1935), wielded despotic power as the virtual Dictator of Poland for most of the time from 1920 until his death.
- Pindar** (522-443 B.C.), the eminent lyric poet of ancient Greece.
- Pinero, Sir Arthur Wing** (1855-1934), was an able English dramatist and former actor, of Portuguese descent. *Dandy Dick*, *The Second Mrs. Tanqueray* and *Mid-Channel* are among his plays.
- Pirandello, Luigi** (1867-1936), was a prominent Italian dramatist and novelist, many of whose works have been translated into English. Awarded Nobel Prize for Literature, 1934.
- Pissarro, Camille** (1830-1903), French Impressionist painter of landscapes; studied under Corot.
- Pitman, Sir Isaac** (1813-97), founded the Pitman system of phonographic shorthand.
- Pitt, William** (1759-1806), was the second son of the Earl of Chatham. Entered Parliament at twenty-one, and by his brilliant oratory captivated the House of Commons. In 1782, when only twenty-three, he became Chancellor of the Exchequer, and in the following year was made Premier, and held that office for seventeen years, through the trying period of the French Revolution, when war with France was almost continuous. He was undoubtedly one of the most brilliant statesmen that England has produced, and his death at the early age of forty-six was a great loss to the country. He was buried in Westminster Abbey.
- Pius XII.**, Cardinal Eugenio Pacelli (b. 1876), Elected Pope, March 2, 1939. A brilliant diplomat, scholar, and linguist. As Papal Secretary of State, 1930-39, was outspoken in his condemnation of those aspects of the policy of the Totalitarian States which he considered anti-Christian. Was for many years Papal Nuncio in Germany. In 1936 visited the U.S.A., where he was the guest of President Roosevelt.
- Pizarro, Francisco** (c. 1471-1541), was an adventurous Spaniard who, after Columbus's discoveries in the New World, set out for South America, conquering Peru for the Emperor Charles V. Pizarro's career in Peru was characterised by excessive cruelty, and in the end he was killed by his own soldiers.
- Planck, Prof. Dr. Max** (1858-1947), German physicist, whose investigations into radiation of energy culminated in 1901 in his law of radiation, which laid the foundation of the quantum theory. Awarded Nobel Prize for Physics, 1918.
- Plato** (427-347 B.C.), the renowned Greek philosopher who taught at Athens, and greatly distinguished himself by his lectures and writings. His *Dialogues* and his *Republic* are among the greatest works of the ancients, and embody a philosophical system which has served for admiration and discussion in all succeeding ages. His real name was Aristocles. He was Socrates' disciple and Aristotle's teacher.
- Playfair, Sir Nigel** (1847-1934), English actor, theatrical manager and producer. Made his professional debut in 1902 in *A Pair of Knickerbockers*. In 1918 became lessee of the Lyric Theatre, Hammersmith, and made a brilliant beginning with *Abraham Lincoln* and *The Beggar's Opera*, which was a remarkably popular and artistic success and ran for nearly 1,500 performances.
- Plimsoil, Samuel** (1824-98), was a native of Bristol, and while M.P. for Derby got up an agitation on behalf of merchant sailors, procuring the passing of the Merchant Shipping Act of 1876, which by defining a line above which no ship must sink in the water when loaded has ever since made the overloading of ships illegal. The line is known as the Plimsoil Mark.
- Pliny**: Pliny the elder was a naturalist of high reputation; Pliny the younger, his nephew, achieved renown by a series of historical *Letters* and died A.D. 113.
- Plotinus** (c. 203-c. 262), Greek philosopher, was the founder of Neoplatonism, which had considerable influence on early Christian thought.
- Plutarch** (c. 46-120) a pagan Hellenic writer, a contemporary of the authors of the two gospels according to St. Matthew and St. Luke. His *Lives of Agis and Cleomenes* form one of the world's most famous literary productions.
- Poe, Edgar Allan** (1809-49), was an American poet of unique genius, author of *The Raven*, *The Bells*, and other poems of haunting melody and dainty fancy. Poe's *Tales of Mystery* are thrilling examples of their class.
- Poincaré, Raymond Nicolas Landry** (1860-1934), was President of France from 1913 to 1920 and won the confidence and admiration of the French people and their Allies by his services during the first world war. He was Prime Minister in 1912, 1922-24, and 1926-29.
- Pollard, Professor Albert Frederick**, F.B.A. (1869-1948), English historian and first director of the Institute of Historical Research. His books include *Factors in Modern History*, *The Evolution of Parliament*, and many authoritative works on the Tudor period, such as his *Henry VIII*, *Wolsey*, and *Somerset*.
- Pollitt, Harry** (b. 1890), Leader of the British Communist Party.
- Polo, Marco** (1256-1323), the famous Venetian traveller and explorer, who made journeys through China, India, and other eastern countries, and published the record of his various wanderings, recounting the many wonders and marvels he had seen—a record which seemed for the most part beyond credence to his contemporaries, but now largely confirmed.
- Pompadour, Jeanne Antoine Poisson, Marquise de**, otherwise known as Madame de Pompadour (1721-64), was for a long time the favourite of Louis XV. of France, over whom she exercised great influence.
- Pompey the Great** (106-48 B.C.), distinguished himself as a general while young, clearing the Mediterranean of pirates, and ultimately became, with Caesar and Crassus, triumvir.
- Pons, Lily** (b. 1904), French coloratura-soprano, who made her debut at the Metropolitan Opera House, New York, in 1930, and toured widely. Became U.S. citizen in 1940.
- Pope, Alexander** (1688-1744), the celebrated 18th century poet and translator of *Homer*. Author of *The Rape of the Lock*, *Essay on Criticism*, and *Essay on Man*.
- Portal of Hungerford**, Marshal of the R.A.F. Charles Frederick Algernon, 1st Viscount, K.G., G.C.B., O.M., D.S.O. (b. 1893), Chief of the Air Staff, 1940-45.
- Pound, Ezra Loomis** (b. 1885), American poet and scholar, founder of the Imagist school of poetry, famous both for the beauty of his individual verse and for his excellent translations of Provencal, Latin, Chinese, French and Italian poets. A scholar with a remarkable knowledge of medieval literature and a master of rhythmic invention in poetry.
- Poussin, Nicolas** (1593-1665), an eminent French painter patronised by Louis XIII.
- Poynter, Sir Edward John**, Bt., G.C.V.O., P.R.A. (1836-1919), President of the Royal Academy, 1896-1919. Had a highly successful career as a painter. At first his work was mainly of a decorative character, but gradually he developed exceptional talent as a painter of classical subjects. His *Perseus and Andromeda*, *Atalanta's Race*, *Nausicaa and Her Maidens*, are all great

pictures. Director of the National Gallery from 1894 to 1905.

**Frasad, Dr. Rajendra** (b. 1884), first President of the Indian Union, 1950; re-elected for 5 years, 1952.

**Praxiteles**, a great Greek sculptor who lived in the 4th century B.C.

**Preece, Sir William Henry, K.C.B., F.R.S.** (1834-1913), a Welsh electrician, connected with the Electric Telegraph Service from 1853, and conspicuously successful in his experiments which led to the later developments in telegraphy. He was associated with Marconi in his wireless-telegraphic schemes and introduced the block system into England.

**Prescott, William Hickling** (1796-1859), one of the best known of American historians.

**Prichard, James Cowles, M.D., F.R.S.** (1786-1848). British ethnologist and physician, whose knowledge of anatomy, psychology, and of languages enabled him to grasp the principle that people should be studied as a whole. He paved the way for future anthropological research.

**Priestley, John Boynton, M.A.** (b. 1894), novelist, playwright and broadcaster, whose work has received great praise and includes the novels *The Good Companions*, *Angel Pavement* and the plays *Dangerous Corner*, *Time and the Conways*, *I have been here before*, and *The Linden Tree*.

**Priestley, Joseph, F.R.S.** (1733-1804), was the discoverer of oxygen and other gases, and wrote *A History of Electricity*. He was also a great advocate of freedom and progress.

**Priestley, Sir Raymond, M.A., D.Sc.** (b. 1886), geologist; Principal and Vice-Chancellor of Birmingham Univ., 1938-52. Took part in the Shackleton Antarctic Expedition of 1907-9 and Scott's Antarctic Expedition 1910-13. President of the British Association, 1956.

**Prior, Matthew** (1664-1721), a well-known poet and wit who acquired celebrity by writing *The City Mouse and Country Mouse*.

**Prokofiev, Serge Sergeyevich** (1891-1953), celebrated Russian composer, whose music has a strong folk-song element, rich in melody and invention. He has written operas: *The Love of Three Oranges*, *The Betrothal in a Nunnery*, *War and Peace*, ballets: *Romeo and Juliet*, *Cinderella*, symphonies, chamber music and the music for Eisenstein's films *Alexander Nevsky*, *Ivan the Terrible*, etc.

**Protagoras** (c. 480-411 B.C.), a Greek philosopher, chief of the Sophists, famous for his scepticism and disbelief in objective truth.

**Proudhon, Pierre Joseph** (1809-65), a French political economist.

**Proust, Marcel** (1871-1922), French psychological novelist; author of a series of 15 novels known under the title of *A la Recherche du Temps Perdu*. Proust's works have been admirably translated into English by C. K. Scott Moncrieff.

**Pruhon, Pierre Paul** (1758-1823), a French historical and portrait painter.

**Ptolemy, Claudius Ptolemæus**, a famous astronomer and geographer of Alexandria, who flourished from c. A.D. 90-168. He founded the Ptolemæic system, which taught that the earth was stationary and the heavenly bodies revolved around it.

**Puccini, Giacomo** (1858-1924), famous Italian operatic composer whose works include *La Bohème*, *Madame Butterfly*, *Manon Lescaut*, and his posthumous *Turandot*.

**Purcell, Henry** (1658-95), was a celebrated organist and composer, who did much to improve the musical service of the Church. Was organist of Westminster Abbey, and the most famous member of a family of notable musicians.

**Pusey, Edward Bouverie** (1800-82), a famous Anglican cleric; he published *Tracts for the Times*, which inaugurated the Tractarian movement that developed into what became known as Puseyism.

**Pushkin, Alexander** (1799-1837), the national poet of Russia, several times exiled for his liberal views and held in high honour by contemporary Russia. Died of wounds received in a duel. His poetical tales are full of dramatic power. *Eugene Onegin* is generally considered his masterpiece and *Boris Godunov* is a fine tragedy.

**Pym, John** (1584-1643), a prominent statesman in the reign of Charles I. A leader of the Puritan opposition in Parliament.

**Pythagoras** (circa 582-500 B.C.), a great Greek philosopher, who taught the doctrine of the transmigration of souls, and also a system of astronomy similar to that of Copernicus.

## Q

**Quaritch, Bernard** (1819-99), a famous dealer in rare books, who was a native of Germany but settled in London, and became naturalised in 1847. His knowledge of scarce and valuable books was unique. His shop in Piccadilly was a storehouse of literary treasures.

**Quiller-Couch, Sir Arthur Thomas** (1863-1944) was a well-known novelist and essayist, who as "Q" published many delightful stories, including *Dead Man's Rock*, *Troy Town*, and *The Splendid Spur*. Edited the *Oxford Book of English Verse*. Professor of English Literature, Cambridge University, 1912-44.

## R

**Rabelais, François** (c. 1495-1553), the great French satirist, first adopted the career of a monk, then studied medicine, and settled at Lyons as a doctor, and it was there that he published his *Gargantua and Pantagruel*, among the wittiest though coarsest books in any language.

**Rachel, Madame** (Elizabeth Félix) (1821-58), the most famous French actress of her time; achieved success in Racine's *Phèdre* in 1843.

**Rachmaninoff, Sergei Vassilievitch** (1873-1943), was a Russian composer, and pianist of great distinction. His first important work, the opera *Aleko*, was produced at Moscow in 1893. In 1899 appeared in London with great success both as a pianist and conductor of his own works. Became a naturalised American citizen in Feb. 1943.

**Racine, Jean** (1639-99), a distinguished French tragic dramatist, best known by his *Andromaque*, *Phèdre*, and *Athalie*.

**Rackham, Arthur, R. W. S.** (1867-1939), a noted English artist who excelled in the illustration of books such as *Peter Pan*, *Alice in Wonderland*, Wagner's *Ring Librettos*, *Mother Goose*, Grimm's and Andersen's *Fairy Tales*.

**Radcliffe, Mrs. Anne** (1764-1823), wrote some highly sensational novels in which mystery and horror were combined with great effect. Her most famous book is *The Mysteries of Udolpho*.

**Radford, Admiral Arthur William** (b. 1896), succeeded Gen. Bradley as Chairman Joint Chiefs of Staff, 1953; formerly C-in-C. in Pacific.

**Radhakrishnan, Sir Sarvepalli, Kt., M.A.** (b. 1888). Vice-President of the Indian Union, 1952; formerly Spalding Professor of Eastern Religions and Ethics at Oxford.

**Raeburn, Sir Henry, R.A.** (1756-1823), was a famous Scottish portrait painter, and friend and pupil of Sir Joshua Reynolds.

**Raemakers, Louis** (b. 1869), famous Dutch cartoonist. He was famous for his scathing satires on the Germans during the first world war, and published *Cartoon History of the War*, 1919.

**Raffles, Sir Thomas Stamford** (1781-1826), an eminent naturalist. He was the founder and first President of the Zoological Society of London. Founded Singapore, 1819.

**Raikes, Robert** (1785-1811), a practical propounder of the Sunday School system.

**Raleigh, Sir Walter** (1552-1618), a scholar, courtier, soldier, sailor, and statesman. In 1584 Queen Elizabeth granted him a patent for the discovery and settlement of unknown countries in the far West. The colonisation of Virginia followed. He is said to have introduced into this country both the potato plant and tobacco. At one time he was in great favour at Court, but quarrelled with the Queen, and suffered in fortune in consequence. When James I. came to the throne, Raleigh was supposed to be implicated in a conspiracy against that monarch, and was sentenced to death. After that he was a prisoner in the Tower of London for twelve years, and there he wrote his *History of the World*, and other works. In 1615 James set him at liberty in order to head an expedition to Guiana in the hope of finding gold, but being unsuccessful he was again imprisoned on his return, and finally beheaded in Old Palace Yard.

**Raleigh, Sir Walter, M.A.** (1861-1922), Professor of English Literature at Oxford, and author of many volumes on eminent men of letters,

- including books on Milton, Wordsworth, and others. His work on Shakespeare, 1907, is his highest achievement.
- Raman, Sir (Chandrasekhara) Venkata, F.R.S.** (b. 1888), Indian physicist whose main work has been in spectroscopy. For his research on the diffusion of light and for the discovery of the "Raman Effect" he was awarded the 1930 Nobel Prize in Physics.
- Rameau, Jean Philippe (1683-1764)**, French composer, who was a church organist at Lille and Clermont-Ferrand before settling in Paris in 1722. He immediately attracted attention by his *Treatise on Harmony*, 1722, which was followed by four other important works on musical theory. These works profoundly influenced musical development in the 18th century. He also composed a number of operas.
- Ramon y Cajal, Santiago (1852-1934)**, Spanish histologist who made many discoveries in the structure of the nervous system. Nobel Prize-man, 1906.
- Ramsay, Sir William, K.C.B., F.R.S. (1852-1916)**, chemist and discoverer with Lord Rayleigh of the hitherto unknown constituent of air, argon. Later discovered helium and detected other inert gases, which he called neon, krypton, and xenon. With F. Soddy carried out research on radium emanation. Awarded Nobel Prize in Chemistry, 1904. President of the British Association, 1911.
- Rank, Joseph Arthur (b. 1888)**, film magnate, who turned his attention from the family flour-milling business to the cinema and has built up a large and powerful organisation.
- Ranke, Leopold von (1795-1886)**, the painstaking and thorough German historian who laid the basis of modern historical research and demonstrated many of its methods.
- Raphael Santi (1483-1520)**, the distinguished Italian painter whose works excel all others in their beauty of expression and inspired treatment. He lived a considerable period in Rome, where he painted his famous frescoes for the Vatican and St. Peter's and also the celebrated cartoons designed for the tapestries of the Papal chapel, which afterwards were brought to England, and are now at the Victoria and Albert Museum. His last painting was *The Transfiguration*. Examples of his work are to be found in most of the great European collections, including our own National Gallery.
- Rasputin, Grigori Yefimovich (1871-1916)**, Russian monk who lived quietly in his native village until 1904, when he became notorious for his extravagant teachings, which gave him a Messianic-like position, and advocated sin in order to obtain repentance and salvation. In 1907 he was presented to the Court, where he soon became all-powerful. A seeming miracle which improved the health of the Tsarevitch Alexis increased his influence with the Czar and Czarina, although he was hated by the bulk of the nation, and most of the nobility.
- Rathbone, Eleanor (1872-1946)**, social reformer, humanitarian, and independent politician. Championed widows' pensions and family allowances and laboured for political refugees, particularly children.
- Ravel, Maurice (1875-1937)**, was one of the foremost French composers. Famous for his piano compositions, chamber music and orchestral compositions.
- Raven-Hill, Leonard (1867-1942)**, English artist and cartoonist, was well known for his drawings and cartoons in *Punch*, 1896-1935.
- Rawlinson, Sir Henry Creswicke, Bt., G.C.B., F.R.S. (1810-95)**, diplomatist, soldier and Orientalist. For a number of years he superintended explorations in Assyria and Babylon, accumulating a valuable collection of antiquities now in the British Museum.
- Ray, John (1627-1705)**, an English naturalist. Was famous for his contributions to science of botany. Has been called the "father" of English natural history.
- Rayleigh, 3rd Baron, O.M., F.R.S. (1842-1919)**, one of the most eminent of British physicists; an authority on sound vibrations, and the co-discoverer with Sir William Ramsay of argon. In 1904 was awarded the Nobel Prize for physics.
- Read, Sir Herbert, Kt., D.S.O., M.C. (b. 1893)**, English poet and critic. He was assistant keeper at the Victoria and Albert Museum (1922-31), professor of fine art at Edinburgh (1931-33), and edited the *Burlington Magazine* (1933-39). His writings include *Poems 1914-1934*, *In Retreat*, *Reason and Romanticism*, *Education through Art*.
- Reade, Charles (1814-84)**, holds high rank amongst the Victorian novelists. His first story, *Peg Woffington*, was published in 1852. *It's Never too Late to Mend*, *Griffith Gault*, and *The Cloister and the Hearth* are his best-known novels.
- Reading, Rufus Daniel Isaacs, 1st Marquess of, P.C., G.C.B., G.C.S.I., G.C.I.E., G.C.V.O. (1860-1935)**, Liberal statesman, who became Attorney-General in 1910 and Lord Chief Justice in 1913, served as Viceroy of India from 1921 to 1926, and was Foreign Secretary in the National Government of 1931.
- Reaumur, René Antoine Ferchault de (1683-1757)**, an eminent French chemist, who invented the thermometer which bears his name.
- Récamier, Madame Jeanne Françoise Julie Adélaïde Bernard (1777-1849)**, a noted society woman of the days of Napoleon.
- Reeves, (John) Sims (1818-1900)**, was the most celebrated English tenor of his time.
- Regnault, Henri Victor (1810-78)**, a French scientist who made highly successful experiments in regard to the physical properties of bodies and their relation to heat.
- Regnault, Jean Baptiste, Baron (1754-1829)**, a talented French genre painter.
- Reith, John Charles Walsham Reith, 1st Baron (b. 1889)**, British civil engineer, the first Director-General of the British Broadcasting Corporation, 1927-38. Recognised as a man of great organising ability, he has served successively as Chairman of Imperial Airways (1938-39), Chairman of B.O.A.C. (1939-40), Min. of Information (Jan.-May 1940), Min. of Transport (May-Oct. 1940), Min. of Works and Buildings (Oct. 1940-Feb. 1942), Dir. of the Admiralty's Combined Operations Material Dept. (1943-45), Chairman Commonwealth Telecommunications Conference (1945), Chairman Commonwealth Communications Council (1946), and Chairman of the Colonial Development Corporation.
- Rembrandt, Harmens van Rijn (1606-69)**, one of the greatest of the Dutch school of painters who produced many remarkably successful portraits, as well as numerous figure subjects, all of them distinguished by their masterly qualities. He was an etcher of high ability also, and a number of his works are in the British national collections.
- Renan, Ernest (1823-92)**, a noted French author who wrote much upon religious subjects, and won special fame by his *Life of Jesus*, published 1863.
- Renl, Guido.** (See Guido Renl.)
- Rennie, John F.R.S. (1781-1821)**, a Scottish civil engineer. He was the constructor of the Waterloo and Southwark and new London bridges over the Thames, the London Docks, the East and West India Docks, the Plymouth breakwater, and many other works at Liverpool, Leith, Dublin, Hull, and elsewhere.
- Renoir, Auguste (1841-1919)**, great French artist of the Impressionist school, whose vision was carefree and romantic. Some of his greatest achievements were in still-life and landscape. *La Loge*, *Les Parapluies*, *La Première Sortie*, *Grandes Baigneuses* are famous pictures.
- Reuter, Baron Paul Julius de (1821-99)**, was the pioneer of telegraphic press services.
- Reymont, Vladislav Stanislaw (1868-1925)**, Polish novelist; Nobel Prize 1924. (*The Peasants*).
- Reynolds, Sir Joshua, P.R.A. (1723-92)**, was the first President of the R.A. from 1768 till his death, and the most eminent English portrait painter of his time.
- Rhodes, Rt. Hon. Cecil John (1853-1902)**, born at Bishop's Stortford. Went to South Africa in 1871, entered upon a diamond-mining enterprise at Kimberley, and acquired a considerable fortune. Was a member of the Cape Legislature in 1881, and became Premier in 1890. He was at the head of the British South Africa Chartered Company, for which a vast amount of territory was annexed, the holding obtaining the name of Rhodesia. Mr. Rhodes was Cape Premier again in 1896; then followed the Jameson Raid and his retirement from political life. During the Boer War he was detained in

- Kimberley and did not live to see the campaign closed. He left the bulk of his fortune for the founding of scholarships at Oxford.
- Ricardo, David** (1772-1823), a celebrated English political economist of Hebrew descent, whose *Principles of Political Economy* gained him a high place among the exponents of the science.
- Richard I.** (1157-99) was King of England from 1189 to his death. He laid heavy burdens upon the people in order to equip an army for the third Crusade. At first he was victorious and did such valiant deeds that he received the name of "Cœur de Lion." Being ultimately defeated, he signed a truce with Saladin, and on his way back to England was shipwrecked. Disguised as a pilgrim, he was identified in Austria, and handed over to the Emperor of Germany, who imprisoned him in a remote castle. A large sum was demanded and paid for his ransom, and after over a year of durance he returned to England, and was crowned at Winchester. Later he was engaged in a war with France, and was mortally wounded by a bolt from a crossbow while besieging the castle of Chalus in the province of Limousin.
- Richard II.** (1367-1400), son of the "Black Prince," succeeded his grandfather, Edward III., in 1377, when but ten years old, a Regency being appointed during his minority. In the Wat Tyler rising of 1381 the King confronted the rioters and promised them redress, an undertaking which he did not fulfil. For a time he was greatly under the influence of his uncle, Thomas, Duke of Gloucester, but on coming of age dismissed him, and ruled with some approach to dignity for the next seven years. After 1396 he developed a highly tyrannical disposition and banished or put to death many of the leading statesmen, practically freeing himself from Parliamentary control. The opposition against him came to a head in 1399, when Bolingbroke defeated him, and he was made prisoner and died—probably by violence—in Pontefract Castle.
- Richard III.** (1452-85) last Plantagenet king of England who usurped the throne on the death of his brother Edward IV in 1483, murdering his two young nephews in the Tower. This led to a rebellion in favour of the Earl of Richmond (later Henry VII) and he was slain on Bosworth Field. His character has been the subject of dissension among historians but there is no doubt that despite his unscrupulousness he was a brave soldier and able administrator.
- Richards, Sir Gordon** (b. 1904), British jockey who had one of the most successful riding records in the history of the British Turf: 21,834 mounts, 4870 winners, including the Derby (1953). Retired, 1954.
- Richardson, Sir Albert Edward**, K.C.V.O., P.R.A., F.S.A., F.R.I.B.A. (b. 1880), British architect and Pres. of the Royal Academy since 1954.
- Richardson, Sir Owen Williams**, D.Sc., F.R.S. (b. 1879), distinguished English physicist. Awarded Nobel Prize in 1928 for his researches on the emission of electricity from hot bodies.
- Richardson, Sir Ralph David** (b. 1902), actor who has made many appearances on stage, screen, and radio. Among his films are *South Riding*, *Anna Karenina*, and *The Fallen Idol*.
- Richardson, Samuel** (1689-1761), author of *Pamela*, *Clarissa Harlowe*, and *Sir Charles Grandison*, exercised considerable influence on the development of the novel in England.
- Richelieu, Armand Jean du Plessis, Cardinal Duc de** (1585-1642), the eminent French ecclesiast and statesman, who was Minister to Louis XIII. for eighteen years. He was practically Master of France during the best part of his Cardinalate.
- Ridley, Nicholas** (1500-55), was Bishop of Rochester in 1547 and Bishop of London in 1550. He took an active part in the Reformation. He was burned at the stake along with Latimer.
- Rienzi, Cola di** (1313-54), a Roman patriot of humble birth who inflamed the people against their rulers, and aroused such enthusiasm that they proclaimed him "Tribune." During the seven months that he was permitted to exercise supreme power, he proved himself the true friend of the poor. Ultimately, however, his enemies proved too strong for him and he was imprisoned for three years at Avignon. Later murdered in a popular uprising.
- Rilke, Rainer Maria** (1875-1926), German lyric poet, born in Prague. His work, marked by great beauty of style, culminated in the *Duinese Elegies*.
- Rimbaud, Jean Nicolas Arthur** (1854-91), French poet of great originality and friend of Paul Verlaine. All his poems were written between his sixteenth and nineteenth years.
- Rimsky-Korsakov, Nicolas Andreievich** (1844-1908), an eminent nationalist Russian composer whose works include *Le Coq d'Or*, *Scheherazade* and many orchestral suites, overtures, songs, and piano pieces.
- Rizzio, David** (c. 1540-66), was the Italian secretary of Mary Queen of Scots and an accomplished musician. Suspected of a too great attachment to Mary, he was murdered by Darnley and his friends in the Queen's presence in the Palace of Holyrood.
- Robbia, Luca Della** (1400-1482), a famous Florentine sculptor. He was the introducer of enamelled terra-cotta work.
- Roberts, Field-Marshal Earl**, V.C., K.G., P.C., K.P., G.C.B., O.M., G.C.S.I., G.C.I.E. (1832-1914), the distinguished soldier, first saw service in the Indian Mutiny, when he won the V.C. In 1880 during the Afghanistan campaign made his historic march from Kabul to Kandahar where he won a complete victory. After serving as C.-in-C., India, 1885-93, and as C.-in-C., Ireland, 1895-99, took over in South Africa in December, 1899, and entirely reversed the unhappy military situation before handing over to Kitchener a year later. C.-in-C. from 1901 until the office was abolished in 1904, and was latterly an ardent advocate of conscription.
- Robertson, Sir Charles Grant**, C.V.O. (1869-1948), English historian who was Vice-Chancellor of Birmingham University, 1927-38, and Principal 1920-38. His works include *The Rise of the English Nation*, 1895, *England under the Hanoverians* 1911, and *Bismarck*, 1918.
- Robertson, Field-Marshal Sir William**, Bt., G.C.B., G.C.M.G., G.C.V.O., D.S.O. (1860-1933), the only British soldier to rise from Private to Field-Marshal, served as C.I.G.S., 1915-18. His son, General Sir Brian Hubert, G.C.B. (b. 1892), has had a distinguished military career and was appointed Chairman of the British Transport Commission in 1953.
- Robeson, Paul Le Roy** (b. 1898), the famous negro singer and actor, who through his singing of spirituals has increased our knowledge and understanding of the negro. Was a great success in London in 1930 playing *Othello*.
- Robespierre, Maximilien François Marie Isidore de** (1758-94), was a country advocate until the outbreak of the French Revolution, when he went to Paris, became an enthusiastic leader of the Jacobin Party, and was made a Member of the Assembly. In the Reign of Terror as President of the Committee of Public Safety he sent vast numbers to the guillotine. Then a counter-movement was set on foot and he was denounced in the Assembly, and, trying to escape, was shot and subsequently guillotined.
- Robey, Sir George**, C.B.E. (George Edward Wade), (1809-1954), famous British comedian of the music-hall. His greatest success was in the revue *The Bing Boys Are Here* during the First World War. Knighted in 1953.
- Robinson, Sir Robert**, O.M., F.R.S., D.Sc. (b. 1886), British scientist of outstanding brilliance in the field of organic chemistry; Pres. of Royal Society, 1945-50; Pres. of British Association, 1955; Prof. of Organic Chemistry at the Universities of Sydney, Liverpool, St. Andrews, Manchester, University College, London, and Wayneite Prof. of Chemistry at Oxford, 1931-55. Nobel Prizewinner, 1947. Awarded the Priestley medal in 1953, the highest honour in American chemistry.
- Robinson, William Heath** (1872-1944), was an English artist who soon made his mark as an illustrator of books, but was even better known by his humorous drawings in *The Sketch* and other British and American periodicals.
- Rob Roy** (the traditional nickname of Robert McGregor) (1671-1734), a noted Highland outlaw who levied blackmail on the farmers and rich people of the country-side in return for certain protective services. He belonged to the clan McGregor.

**Roberts, Amy** (1532-1560), daughter of Sir John Roberts, and wife of Robert Dudley, afterwards Earl of Leicester. While living in seclusion at Cumnor Place under the charge of Anthony Forster, she met her death either by accident or foul play, by the latter according to common belief, Elizabeth's favourite having reason to wish her out of the way. She was discovered dead at the bottom of an old staircase.

**Rockefeller, John Davison** (1839-1937) was said to be the richest man in the world. Was born on a small farm in New York State, and there worked until sixteen. Migrated to Cleveland, and found employment in an office for a few years. About this time the oil trade was in a disorganised condition, owing to the reckless trading and crude methods of refining. Rockefeller saw what was wrong, and resolved upon trying to remedy it. Later he began oil-refining, and entered into the business with such vigour of purpose, and made so many improvements, that he became a millionaire in a very few years. From the exertions of himself and associates grew the Standard Oil Trust, beginning with a capital of £200,000 in 1870, and extending at such a rate that in 1892 the capital had reached twenty-two millions sterling. During his life-time he gave some 750 million dollars to education and charity.

**Rodin, Auguste** (1841-1917), the most celebrated French sculptor of recent days, who possessed a bold and original genius. His numerous statues and his fine historic monuments, especially that for Calais commemorating the bravery of Eustache de Saint-Pierre, brought Rodin well-deserved fame.

**Rodney, 1st Baron, K.B.** (1719-92), a famous English admiral who, having gained numerous victories, routed the French fleet under the Comte de Grasse, whom he took prisoner, the result of this crowning success being the Peace of Versailles, 1783.

**Rogers, William Penn Adair** ("Will") (1879-1935), was America's foremost humorist and a famous stage and film actor; was killed with Wiley Post on a holiday flight to Alaska Aug. 15, 1935.

**Roland de la Platière, Madame Manon Jeanne** (1754-93), was one of the leading figures of the French Revolution. Her husband, Jean Marie Roland de la Platière (1734-93), who was one of the Ministers during the Girondist period, escaped from Paris on the disruption of his Party, but his wife remained behind, and was sent to the guillotine. During her incarceration she wrote an *Appeal to Posterity*, remarkable for its beauty of sentiment and patriotic enthusiasm. Her husband committed suicide on receiving the news of her execution.

**Rolland, Romain** (1866-1944), an eminent French author whose finest work, *Jean-Christophe*, in ten vols., gained him the Nobel Prize for Literature, 1915.

**Romilly, Sir Samuel, K.C.** (1757-1818), a famous English lawyer who was Solicitor-General in 1806 and for many years had a distinguished career both in Parliament and at the Bar. He effected many improvements in the Criminal Law.

**Rommel, Field-Marshal Erwin** (1891-1944), was probably the ablest German general engaged in the second world war. His conduct of the war during the North African campaign won high praise and brought the redoubtable Afrika Corps nearly to Alexandria. He was also engaged in the campaigns in Western Europe in 1940 and 1944.

**Romney, George** (1734-1802), was born in North Lancashire, studied portrait painting with a Kendal artist, and for a few years obtained a living by local portrait painting. Going to London in 1762, his talent gained him speedy recognition; and after studying for a couple of years in Rome, he set up as a portrait-painter in Cavendish Square, and became highly successful. His portraits are among the finest examples of that kind of art that England has produced, and to-day realise large prices.

**Röntgen, Professor Wilhelm Konrad** (1845-1923), the eminent German scientist who discovered the Röntgen rays in 1895. He made other important laboratory investigations, resulting in the solution of difficult chemical problems.

**Roosevelt, President Franklin Delano** (1882-1945), great American statesman. Was Assistant

Secretary to the Navy under Wilson and unsuccessful Democratic candidate for the vice-presidency in 1920. In 1921 was stricken with infantile paralysis, but recovered sufficiently to re-enter public life and become Governor of New York in 1929. From 1933 until his death served as President of the U.S.A., being the first American to be elected for more than two terms. His New Deal programme (see Gen. Information Section) was outstanding in its domestic policy. His "good neighbor" attitude towards the other American countries, his hamstrung efforts to restrain Axis aggression in the 1930s, his inspired and generous adoption of Lend-Lease, his war-time meetings with Churchill and Stalin, and his energetic prosecution of the war after Pearl Harbour, were the more important features of his foreign policy. His "fireside" talks on the radio brought him into close contact with the American people and his passing in the hour of victory was mourned all over the world. In 1905 married his distant cousin, Eleanor Roosevelt (b. 1884), who has become known on her own account as a sociologist and newspaper columnist. She became Chairwoman of the U.N. Human Rights Commission in 1947.

**Roosevelt, Theodore** (1858-1919), Republican President of the U.S.A., 1901-9, and unsuccessful third party candidate in 1912 following a dispute with Taft. His daring exploits in the Spanish-American war won him wide popularity and he was elected vice-president in 1900 becoming president on McKinley's assassination. For his efforts in promoting peace, notably between Russia and Japan, was awarded the Nobel Prize in 1906. The great struggle with the Trusts marked his years of office.

**Rops, Felicien** (1833-98), Belgian artist, famous for drawings, etchings and illustrations. His work is highly original, spirited, humorous and a valued commentary on the life at the time. Was an engraver of magnificent technical skill and a painter of merit.

**Rosa, Salvator** (1615-73), a great Italian painter, who first attracted notice by selling pictures in the streets of Naples. Being encouraged by Lanfranco, he went from Naples to Rome, and quickly became one of the most noted artists of his time. His pictures were chiefly landscapes and battle-pieces.

**Rosebery, Earl of, K.G., K.T., F.R.S.** (1847-1929), prominent Liberal politician and statesman. Was Foreign Secretary 1886 and 1892, and Prime Minister 1894-5.

**Ross, Sir James Clark, F.R.S.** (1800-62), most experienced polar explorer of the century. He accompanied his uncle, Sir John Ross, and Captain Parry on their expeditions. In the *Victory* commanded by his uncle he located the north magnetic pole in 1831. He commanded the expedition of the *Erebus* and the *Terror* to the antarctic (1839-43), discovering Victoria Land, Mounts Erebus and Terror, and the Ross ice barrier.

**Ross, Rear Admiral Sir John, K.C.B.** (1777-1856), the eminent explorer who made several voyages to the arctic and searched for the North-west Passage. He discovered Boothia peninsula, and his nephew reached the magnetic pole.

**Ross, Colonel Sir Ronald, K.C.B., K.C.M.G., F.R.S.** (1857-1932), professor of tropical sanitation and a leading authority on tropical diseases generally, was for many years in the Indian Medical Service, and was awarded the Nobel Prize for Medicine in 1902. Discovered the malaria parasite.

**Rosse, William Parsons, 3rd Earl of, K.P., F.R.S.** (1800-67), was an astronomer of considerable note who contributed greatly to the advancement of science by erecting in his Irish park at Birr Castle, King's County, the largest telescope that had up to that time been constructed. It cost £30,000, and afforded the means of discovering and defining the spiral nebulae. From 1849 to 1854 was President of the Royal Society.

**Rossetti, Dante Gabriel** (1828-82), was the son of Gabriele Rossetti (1783-1852), an exiled Italian author who settled in London in 1824. Dante showed great talent as a painter from boyhood, and became one of the Pre-Raphaelite Brotherhood, formed in 1848. From about 1850 he

- produced a great number of pictures remarkable for their extreme beauty of drawing, splendour of colouring, and poetic force. Among his best-known paintings are his *Ecce Ancilla Domini*, *Sons of Solomon*, *Beatrice*, *Lullih*, and *Dante's Dream*. He also distinguished himself as a poet: his two volumes published in 1870 and 1881 reflect many of the characteristics of his paintings. His sister, Christina Georgina Rossetti (1830-94), was also noted as a poet.
- Rossini, Gioachino Antonio** (1792-1868), one of the most brilliant of modern Italian composers, who devoted his genius principally to opera. His first opera, *Tancredi*, was produced at Venice when he was twenty-one. It was followed after a short interval by *Il Barbiere di Siviglia*, *La Cenerentola*, *Otello*, *Mosè in Egitto*—this latter an oratorio—*La Donna del Lago*, *Semiramide*, and *Guillaume Tell*. All these appeared between 1816 and 1820. He also wrote a *Stabat Mater* in 1842, and a *Messe Solennelle* in 1864.
- Rostand, Edmond Eugene Alexs** (1868-1918), dramatist and member of the French Academy, jumped into fame by his *Cyrano de Bergerac*, 1898.
- Rothenstein, Sir William** (1872-1945), was a distinguished English painter and writer. Was Prof. of Civic Art in Sheffield University, 1917-26; Principal of Royal College of Art, 1920-35; Trustee, Tate Gallery, 1927-33. His paintings include *Doll's House*, *Aliens at Prayers*, *Jews Mourning in a Synagogue*. His son, Sir John Rothenstein, C.B.E. (b. 1901), is Director and Keeper of the Tate Gallery.
- Rothschild, Anselm Meyer** (1743-1812), the founder of the famous financial family was born at Frankfurt-on-Main. After some experience in a bank as clerk, set up for himself first as a moneylender, then as a banker and displaying a genius for finance acquired a large fortune. His son, Nathan Meyer Rothschild (1777-1836), took charge of the London house, and conducted its affairs with great success, and was made an Austrian Baron in 1822. He was succeeded by his eldest son, Baron Lionel de Rothschild (1808-1879), who was the first Jewish member of the House of Commons.
- Roubillac, Louis François** (1695-1762), a French sculptor who contributed many monuments to Westminster Abbey.
- Rouget de Lisle, Claude Joseph** (1760-1836), a French poet who was the author of the words and the music of the *Marseillaise*, the revolutionary song and national anthem of France.
- Rousseau, Jean-Jacques** (1712-78), was born at Geneva, and after a hard and wandering life made the acquaintance of Madame de Warens, with whom he resided for ten years as secretary and companion. In 1745 he proceeded to Paris, where, after a time, he made the acquaintance of Diderot, and wrote under his encouragement. Meanwhile Rousseau had been studying social questions with great ardour, and in 1759 published his romance, *Jouliu, ou la Nouvelle Héloïse*, which was followed in 1762 by *Emile*. These two works contained so much that was at variance with convention, and so opposed to all ideas of moral restraint, that they called forth the condemnation of the orthodox, and Rousseau was obliged to leave France for a time. It was while in England that he wrote his remarkable *Confessions*, and his celebrated *Le Contrat Social*. He gave to France a new field of thought, and laid down principles of government and conduct which bore fruit in the French Revolution.
- Royden, (Agnes) Maude, C.H. (Mrs. Shaw), (b. 1876)**, noted woman preacher, Assistant preacher at the City Temple, 1917-20.
- Rubens, Sir Peter Paul** (1577-1640), one of the most notable of Flemish painters. In 1629 he painted for Charles I., who knighted him.
- Rubinstein, Anton Grigorovich** (1829-94), a famous Russian pianist and composer and founder of the Conservatory at St. Petersburg.
- Rupert, Prince** (1619-82), the brilliant Royalist cavalry general and an admiral opposing Cromwell and later the Dutch, was also an early mezzotinter, an experimental scientist, and the first governor of Hudson's Bay Company.
- Ruskin, John** (1819-1900), writer and art critic, the son of a wealthy London wine merchant. His *Modern Painters* exhibited a masterly perception of the principles of art and a boundless gift of literary expression. Other volumes appeared at intervals including *The Seven Lamps of Architecture* and *The Stones of Venice*, two memorable works which considerably enhanced the author's fame. His writings undoubtedly hastened the recognition of Turner and the Pre-Raphaelite painters. Always taking a deep interest in economic questions, Ruskin delivered and published numerous lectures on a wide range of subjects—art, pleasure, religion, war, work and so forth; and he was acknowledged to be one of the greatest thinkers of the time. Often his views were impracticable and even eccentric, but behind them there was always evident a sincere desire to promote the well-being of the people.
- Russell, Bertrand (Arthur William) 3rd Earl, O.M., F.R.S., M.A., (b. 1872)**, great English philosopher and mathematician, whose vigorous and sceptical writings are having a profound effect on present-day thought. He writes and speaks in a clear and elegant style and regards the task of the philosopher as one of clarification rather than of speculation. *The Principles of Mathematics* (1903), *Principia Mathematica* (1910), written in collaboration with A. N. Whitehead, *Problems of Philosophy* (1911), *Marriage and Morals* (1929), *History of Western Philosophy* (1945), *Human Knowledge* (1948) are among his many works. Nobel Prize for Literature, 1950.
- Russell, Sir (Edward) John, O.B.E., D.Sc., F.R.S. (b. 1872)**. A leading expert on soil chemistry, he has visited most countries of the Commonwealth, the U.S.A., U.S.S.R., and many European countries lecturing and advising on agricultural problems. President of the British Association, 1949.
- Russell, Mary Annette (pseudonym Elizabeth), Countess** (1866-1941). English writer who became famous as the author of *Elizabeth and her German Garden* (1898). Married Count von Arnim in 1890; the 2nd Earl Russell in 1916.
- Russell, George William** (1867-1935), Irish poet generally known by his pen name of A.E. or Æ. Widely known as a leader in co-operative enterprise and a pioneer of Abbey Theatre, Dublin.
- Russell, John, 1st Earl, K.G., P.C. (1792-1878)**, third son of the 6th Duke of Bedford. Entered Parliament as Lord John Russell on attaining his majority, and, ranging himself on the Liberal side, showed great capacity for affairs. Introduced first great measure of Reform, which was passed in 1832. Held several offices before succeeding Peel as Prime Minister in 1846. Remained in power until 1852 and was again Prime Minister from 1865 to 1866, resigning when he failed to carry a further reform bill. He also wrote lives of Thomas Moore and Charles James Fox.
- Russell of Killowen, Baron, P.C., G.C.M.G. (1832-1900)**, Lord Justice of England 1894-98. Was one of the greatest British judges and advocates of the 19th century.
- Rutherford, Lord, O.M., F.R.S. (1871-1937)**, of New Zealand birth. Physicist, pre-eminent in the field of atomic research. Conducted his experiments at Montreal, Manchester, and at the famous Cavendish Laboratory at Cambridge, which attracted brilliant young scientists from all over the world. In 1911 announced his nuclear theory of the atom, and in 1918 succeeded in splitting the atom for the first time. His work paved the way for future nuclear research.
- Ruysdael, Jacob van (c. 1628-82)**, great Dutch landscape painter, some of whose pictures are in the National Gallery.
- Ruyter, Admiral Michiel Adriaanszoon de (1607-76)**, the Dutch admiral who in 1667 invaded England with a fleet of Dutch war vessels, advancing up the Thames and Medway and setting fire to considerable shipping. He soon saw fit to retreat, and more serious trouble was averted.

## S

**Sachs, Hans** (1494-1576), the German shoemaker-poet of Reformation times, was an earnest worker in the Protestant cause, and wrote over 5,000 different pieces, poetry and prose.

**Sadi, or Saadi (Munsh-Uddin) (c. 1184-1292)**, the Persian poet who flourished in the 13th century, and won national fame by his poems *The Garden of Roses* and *The Orchard*.

**Saint-Just, Antoine** (1767-94), one of the later leaders of the French Revolution closely associated with Robespierre.

**St.-Laurent, Rt. Hon. Louis Stephen, Q.C.** (b. 1882), Prime Minister of Canada since 1948.

**Sainte-Saëns, Charles Camille** (1835-1921), a distinguished French composer whose works include the operas of *Samson et Delilah* and *Henri VIII*.

**Saint-Simon, Claude, Comte de** (1760-1825), a French scientist and socialist who had great influence upon the thought of his time.

**Salisbury, George Edward Bateman** (1845-1933), Professor of Rhetoric and English Literature, Edinburgh University, 1895-1915. Author of numerous critical works on literary subjects, on which he was a leading authority.

**Saladin** (circa 1137-93) was Sultan of Egypt, a conquering general, and a deadly foe of Christianity. He swept over Syria and Macedonia, and captured Jerusalem after a great victory at Tiberias. It was against Saladin that the Third Crusade was undertaken, and after his defeat by Richard I. in 1191 his power was shattered.

**Salazar, Antonio d' Oliveira** (b. 1889), Prime Minister and virtual dictator of Portugal since 1932 and responsible for drafting the Portuguese constitution of 1933. Foreign Minister, 1936-47.

**Salisbury, Robert Arthur Talbot Gascoyne Cecil, 3rd Marquess of, K.G.** (1830-1903), led the Conservative Governments of 1885-86, 1886-92, and 1895-1902. Has been considered one of the best Foreign Secretaries England has ever had, holding the office from 1878 to 1880, when he attended the Congress of Berlin, and for much of his premiership. Retired from political life after peace was declared in South Africa. His grandson, Robert Arthur James Cecil, 5th Marquess of Salisbury, K.G. (b. 1893), is Leader of the House of Lords and since 1951 has served successively as Lord Privy Seal, Sec. of State for Commonwealth Relations, Lord Pres. of the Council, and Acting For. Sec. As Viscount Cranborne served as Sec. of State for the Dominions and for the Colonies.

**Salter, James Arthur, 1st Baron, P.C., K.C.B., G.B.E.** (b. 1881), British economist. Successively Min. of State for Econ. Affairs, 1951-52, and Min. of Materials, 1952-53. Assisted the Government in the direction of shipping in both world wars. Independent member for Oxford University 1937-50.

**Sammons, Albert, C.B.E.** (b. 1886), one of the most popular of British violinists. Has been at various times leader of the London String Quartette, the Chamber Players, and the Russian Ballet. Famous as a solo violinist at the Sir Thomas Beecham, B.B.C., London Symphony, Philharmonic, Hallé, and Scottish orchestral concerts and leading Festivals.

**Samuel, 1st Viscount, P.C., G.C.B., G.B.E.** (b. 1870), High Commissioner for Palestine, 1920-25; Postmaster-General, 1910-14, and again May to Dec. 1915; Home Secretary, 1916, and again 1931-32. M.P. for Cleveland Division (N. Riding, Yorks), 1902-18, and Darwen Div. of Lancs., 1929-35. Was Under-Sec. to the Home Dept., 1905-9; Chancellor of the Duchy of Lancaster, 1909-10 and 1915-16. Leader of the Liberal Party in the Commons, 1931-35, and in the Lords, 1941-55.

**Sand, George** (1804-76) the leading French authoress of her time—proper name, Armandine Lucile Aurore Dupin, baronne Dudevant—who, both as novelist and dramatist, achieved the highest success. A friend of men of such singular power as Alfred de Musset, Chopin and Sandeau.

**Sankey, Ira David** (1840-1908), the celebrated American evangelist, singer, and composer, associated with Dwight L. Moody, the revivalist (1837-1899), in mission-work in America and Great Britain for many years.

**Sankey, Viscount, P.C., G.B.E.** (1866-1943). Was a Judge of the King's Bench Division, 1914-23, and a Lord Justice of Appeal, 1928-29. Then Lord Chancellor to 1935. He presided over many important committees, and was Chairman of the Coal Mines Commission, 1919, when he declared for the nationalisation of the mines.

**Santayana, George** (1863-1952), philosopher and poet, born in Madrid of Spanish parentage. He was Professor of Philosophy at Harvard University (where he graduated in 1886) from 1907-12, when he moved to France and thereafter spent

his time wandering from country to country. His books include *The Life of Reason* (1905-6), the four volumes of *Realms of Being* (1923-40), *Persons and Places* (1945), and *The Middle Span* (1948).

**Santos-Dumont, Alberto** (1873-1932), a successful experimenter in aerial navigation, his most notable flights being made in Paris, and at Monte Carlo. He visited London in 1903.

**Sappho** (flourished 611-592 B.C.) was the famous lyric poetess of ancient Greece, whose romantic story of *Unrequited Love* is better known than her poetry, of which only a few samples survive.

**Sardou, Victorien** (1831-1908), began writing plays in 1854, but was at first unsuccessful. Later he obtained an introduction to Mlle. Dejazet, the famous actress, for whom he wrote some plays that proved highly popular and placed him at the head of French dramatists. Then followed a long series of successes—*Nos Intimes*, *Séraphine*, *Rabagas*, *Divorcés*, *Fédora*, and so on, from triumph to triumph. Later he turned his attention to historic subjects, and in *Theodora*, *Patrie*, *La Tosca*, *Madame Sans-Gêne*, *Robespierre*, and *Dante*, the last-named written specially for Sir Henry Irving, achieved further fame. He was elected to the French Academy in 1877.

**Sargent, Sir Harold Malcolm Watts, A.R.C.O., F.R.C.M., F.R.S.A.** (b. 1895), one of the best known modern British conductors. Succeeded Sir Adrian Boult as permanent conductor of the B.B.C. Symphony Orchestra, 1950.

**Sargent, John Singer, R.A.** (1856-1925). He was of American parentage and received his art education in Paris. As a portrait-painter he had few equals.

**Sarolea, Charles, D.Ph., D.Litt., LL.D.** (b. 1870), a great scholar and authority on literature. Belgian by birth, but now a naturalised Englishman.

**Sartre, Jean-Paul** (b. 1905), French philosopher, dramatist, and novelist. Founder of the French *Existentialist* school of philosophy. Imprisoned by the Germans 1940-41, and joined Resistance Movement after his release. Author of the plays *Huis Clos*, *La Putain Respectueuse*, *Crime Passimel*.

**Sassoon, Siegfried (Lorraine), C.B.E.** (b. 1886), an English poet and writer of outstanding ability who received the Hawthornden Prize, 1929, for *The Memoirs of a Foxhunting Man*. Became widely known in 1918 after the publication of his *Counter Attack*, which is a condemnation of war, and has since published a series of other notable works.

**Savonarola, Fra Girolamo** (1452-98), the great Florentine preacher and reformer, a monk of the Dominican order who denounced the follies and luxuries of his time, especially attacking Pope Alexander VI., who dealt out vengeance upon him. He was excommunicated, imprisoned, and put to a dreadful death. Savonarola was one of the most learned men of his time, and his works have been translated into nearly all languages. George Eliot's *Romola* contains a fine estimate of his character, and his life by Villari is a great biography.

**Sayce, Prof. Archibald Henry, D.Litt., LL.D., D.D.** (1845-1933), a distinguished Assyriologist and philologist who was Prof. of Assyriology at Oxford University, 1891-1919. His most important works are *Introduction to the Science of Language* 1879, *Ancient Empires of the East*, 1884, *The Principles of Comparative Philology*, 1874, and *Egypt and Babylonian Religion*, 1903.

**Sayers, Dorothy Leigh** (b. 1893), English authoress who has become famous as a writer of detective fiction.

**Scarlatti, Alessandro** (1659-1725), Italian musician whose influence on the history of opera has been great, founded the Neapolitan school. He composed over 100 operas, 200 masses, and over 700 cantatas and oratorios. His son Domenico (1685-1757) was a harpsichord virtuoso and his work has had an important influence in the evolution of the sonata. The chief years of his life were spent at the Spanish Court in Madrid.

**Schiaparelli, Giovanni Virginio** (1835-1910), famous Italian astronomer who was Director of the Milan Observatory, 1862-1900, and did valuable work on meteors and double stars, but is best known for his discovery of so-called canals on Mars.

- Schiller, Johann Christoph Friedrich** (1759-1805), the famous German dramatist and poet. Was born at Marbach in Württemberg. Educated at the Military Academy at Stuttgart, and intended for a soldier, he evinced an irresistible desire for literary fame, and in 1782 had his first play, *The Robbers*, successfully produced at the Mannheim Theatre, to which he was subsequently appointed dramatic composer. He left Mannheim for Leipzig in 1785. Later he proceeded to Dresden, where he completed his *Don Carlos*; and in 1789 he was at the University of Jena as Professor of History. While engaged in this capacity he wrote his *History of the Thirty Years' War*, and made the acquaintance of Goethe, at whose suggestion he removed to Weimar, and during the next ten years produced his greatest works—*Wallenstein*, *Mary Stuart*, *The Maid of Orleans*, and *William Tell*. He died at the early age of forty-six.
- Schlegel, August Wilhelm von** (1767-1845), was a famous German critic who for a number of years held the post of Professor of History in the University of Bonn. He is best known in this country by translations of his *Lectures on Dramatic Art and Literature*, which are remarkable for their appreciation of Shakespeare and their scholarly handling of the drama in all its leading phases. He spent many years with Madame de Staël.
- Schnabel, Artur** (1882-1951), American pianist of Austrian birth, regarded as the greatest exponent of Beethoven's pianoforte sonatas.
- Schönberg, Professor Arnold** (b. 1874), Austrian composer who emigrated to the United States during the Nazi regime. Among his works are the choral orchestral *Gurre-Lieder* and *Pierrot Lunaire*, a cycle of 21 poems for voice and chamber music.
- Schopenhauer, Arthur** (1788-1860), was a German philosopher of a pessimistic cast of mind. His mysticism partakes somewhat of the higher Buddhism. His chief works are *The World Considered as Will and Idea* and *The Two Fundamental Problems of Ethics*.
- Schreiner, Olive**, pen name of Mrs. Cronwright Schreiner (1855-1920), a noted South African novelist, born in Basutoland. She first attracted attention with her successful *Story of an African Farm* (1883) by which work she is best known. She excelled in depicting veldt scenery and Dutch character.
- Schubert, Franz Peter** (1797-1828), one of the most eminent of Austrian musical composers, whose songs and symphonies are among the most inspired of musical compositions, full of melodic beauty, and instinct with emotional power. He also wrote operas, Masses, and cantatas, all of which reached a high level of merit.
- Schumann, Robert Alexander** (1810-56), a famous German composer and musical critic, who did much to help forward the advanced school of German music. He was the author of numerous fantasias, songs, and orchestral compositions, and attained a prominent position among modern composers. His wife, Clara Schumann (1819-96), was a noted pianist and interpreter of Chopin, and a composer of meritorious music.
- Schweitzer, Albert, D.Theol., Dr. Phil., Dr. Med.** (b. 1875), missionary in Lambaréné, a musical critic and authority on Bach's music, a famous organist, and a noted biblical critic who became a Doctor of Medicine in order to devote his life to missionary work in Equatorial Africa. Awarded 1952 Nobel Prize for Peace and Hon. O.M. in 1955.
- Scipio, Publius Cornelius** (circa 232-183 B.C.), the greatest of the Scipios known as *Scipio Africanus the elder*. A distinguished Roman general in the 2nd Punic War.
- Scott, Charles Prestwich** (1846-1931), English journalist who was editor of the *Manchester Guardian* from 1872 to 1929, which under his editorship became one of the leading journals of the country.
- Scott, Sir George Gilbert, R.A.** (1811-78), an eminent architect who gained special fame for his restorations of Gothic churches; designer of the Albert Memorial and the Martyrs' Memorial at Oxford.
- Scott, Sir Giles Gilbert, O.M., R.A., F.R.I.B.A.** (b. 1880), eminent architect. Architect for the Liverpool (Anglican) Cathedral. Grandson of Sir George Gilbert Scott (q.v.).
- Scott, Peter Markham, M.B.E., D.S.C. (b. 1909)**, son of Captain Scott, is known as yachtsman, broadcaster, author of *The Battle of the Narrow Seas*, and bird-arist.
- Scott, Captain Robert Falcon, C.V.O.** (1868-1912), commanded the National Antarctic Expeditions in 1901-4 and in 1910. His ship, the *Terra Nova*, left England on June 1, 1910. In Jan. 1911, winter quarters were established at Cape Evans, and in the following November Scott and a select party left Hut Point for the South Pole, which they reached on Jan. 18, 1912, finding there the Amundsen records. On the return journey every member of the party perished. Seaman Edgar Evans died from concussion of the brain on Feb. 17; Capt. Oates from exposure on March 17; and on March 29 the rest of the party (Scott, Wilson and Bowers) died from starvation and exposure in a blizzard when only 11 miles from One Ton Depot.
- Scott, Sir Walter, Bart.** (1771-1832), one of the greatest of British novelists and a distinguished poet. He was educated for the Bar. His *Minstrelsy of the Scottish Border* was published in 1802. This was followed in 1805 by *The Lay of the Last Minstrel*, in 1808 by *Marmion*; *The Lady of the Lake*, *Rokeby*, and *The Lord of the Isles* coming afterwards in quick succession. In 1814 he published *Waverley* anonymously, which obtained instant success. Other stories followed and the *Waverley* novels and their author, "The great Unknown," were everywhere the subject of discussion. *Guy Mannering*, *The Antiquary*, *Old Mortality*, *Rob Roy*, and *The Heart of Midlothian* were all published before the secret of their authorship was disclosed. Scott made large sums of money by his writings, purchased Abbotsford, and was in the full tide of success when the failure in 1826 of his publisher, Constable, and with him Ballantyne and Co., his printers, involved him in financial ruin. Scott, who was fifty-five, placed himself in the hands of trustees and set himself to pay off the combined debts of over £120,000. The last outstanding debts were cleared after his death on the security of copyrights. His chief works produced in these last painful years were *Woodstock*, *Life of Napoleon*, and *Tales of a Grandfather*. He died at Abbotsford. Created a baronet in 1820.
- Scott-Paine, Hubert** (1891-1954), pioneer in the design and construction of aircraft and sea craft, in particular flying-boats and high-speed motor-boats.
- Scriabin, Alexander Nikolaevich** (1872-1915), a Russian musical composer who invented a new tonality to express his own philosophical ideas. His big orchestral compositions include *The Divine Poem* and *The Poem of Fire*.
- Seaman, Sir Owen, Bt.** (1861-1935), English author and humorist who joined the staff of *Punch* in 1897, and was its editor, 1906-32. His many volumes of verse were characterised by a remarkable gift for humour and parody, combining scholarship with wit that always glittered, and satire with a sting that was never in bad taste.
- Seeley, Sir John Robert, K.C.M.G.** (1834-95), was an historian of note, but acquired his chief fame as a writer by his *Ecce Homo* and *Natural Religion*.
- Selfridge, Harry Gordon** (1858-1947), the American who revolutionised the British department store when he opened the famous shop of Selfridges in Oxford Street in 1909. Noted for his ambitious advertising and lavish entertaining.
- Selous, Capt. Frederick Courtenay, D.S.O.** (1851-1917), a famous English big-game hunter, who in 1871 went to South Africa, where for nearly 20 years he hunted big-game and engaged in scientific exploration. His fine collection of trophies was presented by his widow to the Natural History Museum.
- Senanayake, Rt. Hon. Don Stephen** (1884-1952), First Prime Min. of Ceylon, 1947. Did much to improve the island's agricultural economy.
- Seneca, Lucius Annaeus** (circa 4 B.C.-A.D. 56), the famous stoic philosopher, who was tutor to Nero, and one of that emperor's most influential advisers; he was sentenced to end his own life, a sentence which he courageously carried out.
- Senefelder, Alois** (1772-1834), was the son of an actor at Munich, and himself engaged in dramatic composition. Being too poor to bear

the cost of having his works printed, he turned his attention to inventing lithography, the main feature of the invention being discovered by accident.

**Service, Robert William** (b. 1874), Canadian poet and novelist whose best known works are *Songs of a Sourdough*, *Ballads of a Cheechako*, and *Rhymes of a Rolling Stone*.

**Severus, Lucius Septimius** (146-211), was Roman Emperor from 193 to his death. After many victories in the East he passed over to Britain with an army, subjugated the Caledonians, and repaired and partly rebuilt the famous Hadrian's wall from the Solway Firth to the mouth of the Tyne. He died at York.

**Shackleton, Sir Ernest** (Henry), C.V.O., O.B.E. (1874-1922), commander of the Nimrod Farthest South expedition of 1907-9, reached within 100 miles of the South Pole, and embarked on a new expedition in 1914. He died whilst on a scientific voyage to the Antarctic.

**Shaftesbury, Anthony Ashley-Cooper, 7th Earl of** (1801-85), a distinguished philanthropist, identified himself with the Ten-Hours Bill, connected with the Ragged School Union, Reformatories, Refuges, and Christian Associations of many kinds.

**Shakespeare, William** (1564-1616), England's greatest poet and dramatist, was born at Stratford-on-Avon, and was the son of a tradesman of that town who must have been at one time fairly well-off, seeing that he was made an alderman, and afterwards served as High Bailiff. Later on, however, he appears to have been unfortunate and fallen into straitened circumstances. William was the eldest son, and was probably educated at the Stratford Grammar School, but very little is known of his career up to his eighteenth year, when we have it on record that he married Anne Hathaway, who was eight years his senior. Five years after his marriage he went to London, and the next we hear of him is that he was connected with the Globe Theatre and appeared in sundry small parts. He first appeared before the public as a poet in 1593, with his *Venus and Adonis*, following this in 1594 with *The Rape of Lucrece*. Shortly afterwards he was proprietor of the Globe Theatre, and also had an interest in the Blackfriars Theatre. Then he began that remarkable career of play-writing which has since been the wonder of the world. It is impossible to name the thirty-five plays that he wrote in the exact order in which they were produced, but *Love's Labour's Lost* and *The Comedy of Errors* seem to have been among the earliest, being followed by *The Two Gentlemen of Verona*, and *Romeo and Juliet*. Then followed *Henry VI*, *Richard III*, *Richard II*, *Titus Andronicus*, *The Taming of the Shrew*, *King John*, *The Merchant of Venice*, *A Midsummer Night's Dream*, *All's Well that Ends Well*, *Henry IV*, *The Merry Wives of Windsor*, *Henry V*, *Much Ado about Nothing*, *As You Like It*, *Twelfth Night*. Then came some of his greatest plays, *Julius Caesar*, *Hamlet*, *Troilus and Cressida*, *Othello*, *Measure for Measure*, *Macbeth*, *King Lear*, *Timon of Athens*, *Pericles*, *Antony and Cleopatra*, *Coriolanus*, *Cymbeline*, *A Winter's Tale*, *The Tempest*, *Henry VIII* (part only). It was evident that his plays were remunerative, inasmuch as in a few years he was able to purchase property at Stratford, and when he retired from his profession (about 1610 or 1612) he returned to his native town to live in a house which he had himself built. He died at Stratford at fifty-two, and was buried in Stratford Church.

**Sharp, Granville** (1735-1813), slavery abolitionist and founder of the colony of Sierra Leone.

**Shaw, George Bernard** (1856-1950), brilliant Irish dramatist who conquered England by his pungent wit and devastating exposure of hypocrisy, cant and national weaknesses, and persistently expressed a highly individual opinion whether in his musical criticisms, socialist pamphlets or plays. He wrote many plays including *Man and Superman*, *Heartbreak House*, *Back to Methuselah*, *Saint Joan*, *The Apple Cart*, *Buoyant Billions*, most of which have important prefaces, sometimes equalling the play in length. Was music critic (1888-94) successively to the London *Star* and *World* and during this period wrote *The Quintessence*

of *Ibsenism* and *The Perfect Wagnerite*. Joined the Fabian Society in 1884 and was awarded Nobel Prize for Literature in 1925. He was greatly interested in the reform of the alphabet to save time and labour, and left on trust part of his estate for the carrying out of his ideas. His house at Ayot St. Lawrence was taken over by the National Trust.

**Shelley, Percy Bysshe** (1792-1822), one of the most brilliant poetic geniuses of the 19th century, renowned for the daring and unorthodox opinions which he held. His *Queen Mab* (written when he was nineteen), his *Alastor*, *The Revolt of Islam*, *The Witch of Atlas*, and *Adonais* all breathe the true spirit of poetry, securing him a place in the first rank of British poets. He showed fine dramatic gifts in the *Cenci* and *Prometheus Unbound*, almost reaching sublimity in the latter masterpiece. His *Adonais* was a splendid tribute to the genius of Keats. His first wife, whom he married while very young, committed suicide. He afterwards married Mary Wollstonecraft Godwin, and formed other attachments of a complicating nature. Was always at war with his family, and finally, after spending some time with Byron and Leigh Hunt and other friends in various parts of Italy, was drowned in the Gulf of Spezia by the capsizing of his boat in a storm.

**Shepard, Ernest Howard** (b. 1879), chief cartoonist of *Punch* since 1945. Illustrator of *Winnie-the-Pooh* and other books by A. A. Milne.

**Sheppard, Very Rev. Hugh Richard Lawrie** (Dick), C.H., D.D. (1880-1937), Vicar of St. Martin-in-the-Fields, London, 1914-27, where he established a reputation by his broadcast sermons and attracted large crowds of listeners. Dean of Canterbury, 1929-31; Canon of St. Paul's, 1934-37. Buried in Canterbury Cathedral.

**Sheraton, Thomas** (1751-1806), was the last of the great English cabinet-makers of the 18th century. The Sheraton style which he introduced marks a reaction against Chippendale (*q.v.*).

**Sheridan, Rt. Hon. Richard Brinsley Butler** (1751-1816), one of the greatest of English playwrights, whose comedies are frequently revived. Was born in Dublin, and educated partly at Harrow. Showing considerable capacity for dramatic composition he obtained an introduction to the Covent Garden management, and it was at the Covent Garden Theatre in 1775 that his first comedy, *The Rivals*, was produced, with such a gratifying result that Garrick, who was then at Drury Lane, opened up negotiations with the dramatist which ended in Sheridan becoming part (and ultimately sole) proprietor of Drury Lane. *The Duenna*, a musical comedy, was produced in 1775, and ran through the winter. From 1777 Sheridan managed Drury Lane, opening with an adaptation of Vanbrugh's *Relapse*. This was followed by the production of the greatest of his comedies, *The School for Scandal*, which had a wonderful success. In 1779 *The Critic* was given, and after that Sheridan wrote no more plays until 1789, when *Pizarro* was produced. In the meantime he had gained a high reputation in another sphere. In 1780 he obtained a seat in Parliament and although he only spoke on certain set occasions, he acquired a reputation for oratory which stood him in very good stead, and he filled one or two minor Ministerial offices, remaining in Parliament until 1812.

**Sherman, General William Tecumseh** (1820-91), a famous American soldier who, after taking part in the War with Mexico (1846-48), volunteered at the outbreak of the Civil War (1861). He took part in the battles of Bull Run and Shiloh, and was placed in command of the Army of the Tennessee (1863) and of the military division of the Mississippi with a force of 100,000. In 1864 there occurred the famous 300-mile march across Georgia to the sea. In 1865 his second march, through the Carolinas, culminated in the defeat of Johnston, which led directly to the termination of the war.

**Sherrington, Sir Charles Scott, O.M., G.B.E., F.R.S., M.D., D.Sc.** (1857-1952), one of the greatest of British scientists, and a leading authority on the physiology of the nervous system, whose research work over many years led to great advances in the surgery of the brain. Pres. of the British Association 1920,

- and of the Royal Society, 1920-25. Awarded Nobel Prize for Medicine, 1932.
- Shirley, James** (1596-1666), was an eminent dramatist and poet, imbued with the Elizabethan traditions. He and his wife are said to have died from shock after the Great Fire.
- Shostakovich, Dmitry Dmitriyevich** (b. 1906), one of the most celebrated of present-day Russian composers. His music is complex, profound, and deeply significant of the Soviet age in which he lives. His works include operas, ballets, symphonies, chamber music, and music for films.
- Sibelius, Jean Julian Christian** (b. 1865), Finnish composer, generally acknowledged as the greatest of the century. Works include seven symphonies, violin concerto, several tone poems, about 200 pianoforte compositions and songs.
- Sickert, (Walter) Richard** (1860-1942), British painter and etcher; became President of Royal Society of British Artists, 1928.
- Siddons, Sarah** (1755-1831), the daughter of Roger Kemble, a theatrical manager. The greatest tragic actress of her time.
- Sidgwick, Henry** (1838-1900), Professor of Moral Philosophy at Cambridge, and besides being an eminent educationist in the broader sense, devoted himself with special success to the cause of women's education. Newnham and Girton being largely the outcome of his efforts.
- Sidney, Sir Philip** (1554-86), statesman, poet and soldier; was one of Queen Elizabeth's favourites, and a man of singular ability and bravery. While living in temporary retirement he composed his famous *Arcadia*, but did not allow it to be published in his lifetime. He did not lack for literary fame, however, his *Apology for Poetry and Defence of Poesy*, as well as numerous miscellaneous pieces all distinguished for their beauty of expression and tender sentiment, having won much favour, especially in the circle of the Court. In 1586 he was given a command in the Netherlands and was killed at Zutphen.
- Siemens, Sir William, F.R.S.** (1823-83), a German-born scientist and inventor, chiefly in the field of heat and electricity. Constructed many overland and submarine telegraphs. Brother of Werner v. Siemens, founder of the famous firm of Siemens-Halske.
- Slenskiewicz, Henryk** (1846-1916), famous Polish novelist; Nobel prizewinner, 1905 (*Quo Vadis*).
- Skorski, Vladislav** (1881-1943), Polish general and statesman; Prime Minister during second world war.
- Simon, 1st Viscount, P.C., G.C.S.I., G.C.V.O.** (1873-1954), M.P. for the Walthamstow Div., 1906-18, and Spen Valley, 1922-40; Solicitor-General, 1910-13; Attorney-General, 1913-15; Home Secretary, 1915-16 and again 1935-37; Foreign Secretary, 1931-35. Chancellor of the Exchequer, 1937-40; Lord Chancellor, 1940-45.
- Simonds, Viscount (Gavin Turnbull Simonds), P.C., Q.C.** (b. 1881), Lord High Chancellor of Gt. Britain, 1951-54; Lord of Appeal in Ordinary, 1944-51; Chairman Nat. Arbitration Tribunal, 1940-44.
- Simpson, Sir James Young, Bt., F.R.S.** (1811-70), the discoverer of the utility of chloroform as an anæsthetic, was a native of Scotland, and was a most accomplished experimental surgeon.
- Stclair, Upton** (b. 1878), whose fame as a writer was established when he wrote *The Jungle* in 1906. Made a bold bid for election as Democratic candidate for the Governorship of California in 1934, but was defeated.
- Singer, Isaac Meritt** (1811-75), American mechanical engineer who devoted himself to the improvement of the early forms of the sewing-machine and patented a single-thread and chain-stitch machine.
- Sisley, Alfred** (1839-1899), French Impressionist painter of English origin. Painted with great delicacy and sensitivity, landscapes, villages, trees and rivers. Influenced by Corot and Manet.
- Sitwell, Edith (Louisa), D.B.E.** (b. 1887), English poet whose works include *Eucolic Comedies*, *Gold Coast Customs* and *Collected Poems*. Her two brothers are Osbert (b. 1892), a well-known poet and novelist, and Sacheverell (b. 1900), a poet and critic.
- Sitwell, Sir Osbert, Bt., C.B.E., LL.D., F.R.S.L.** (b. 1892), English writer who made a reputation for bitter, satire drawing his inspiration in the first place from his War experience. His works include several books of poems, short stories, novels, and a family history. He is the leader, with his sister, of a literary group.
- Slm, Field-Marshal Sir William J., G.C.B., G.C.M.G., G.C.V.O., G.B.E., D.S.O., M.C.** (b. 1891), Gov.-Gen. of Australia 1953-. In 1943 took command of the 14th Army in Burma, later becoming commander of the Allied Land Forces, S.E.A.C., and then Commandant of the Imperial Defence College. In 1947 joined the Railway Executive, but left a year later to succeed Lord Montgomery as Chief of the Imperial General Staff (1948-52).
- Sloane, Sir Hans, Bt., F.R.S.** (1660-1753), was born in County Down, Ireland, but settled in London, and became famed as a physician and naturalist. For some years he held the office of President of the Royal College of Physicians, and was elected President of the Royal Society in succession to Sir Isaac Newton. His Library of 50,000 vols., and treasures in natural history and MSS., worth from £50,000 to £80,000, were offered by his will to, and bought by the nation for £20,000, and with that nucleus the British Museum was founded.
- Slowacki, Julius** (1809-49), Polish romantic poet. He was a revolutionary, lived in exile and died in Paris. His tragedies include *Kordian*, *Belladonna* and *Lilli Weneda*.
- Smeaton, John** (1724-92), who rebuilt Eddystone Lighthouse, which had been burned down; he subsequently constructed many important works in connection with harbours and canals. He was also the inventor of an improved blowing apparatus for iron-smelting.
- Smetana, Bedich** (1824-84), was the first important Czech composer and the first conductor of the Prague National Theatre, for which he wrote most of his operas, including *The Bartered Bride* and *Libus*. He wrote much fine choral and piano music. In 1874 he became completely deaf and ten years later died in an asylum. He was the founder of the modern Czech School of Music.
- Smiles, Dr. Samuel** (1812-1904), was in early life a medical practitioner; achieved wide popularity by his *Self Help*, a book that has had an enormous sale.
- Smith, Adam, F.R.S.** (1723-90), the father of the science of political economy. Author of *Theory of Moral Sentiments* and *Wealth of Nations*, which immediately obtained the admiration of the leading men of the day, and secured him the friendship of Gibbon, Hume, Burke, Reynolds, and Dugald Stewart.
- Smith, Sir (Charles) Aubrey** (1863-1948), was not only an outstanding British stage and screen actor for many years but also an accomplished cricketer and a charming and well-loved Hollywood character.
- Smith, Sir Grafton Elliot, M.A., Litt.D., D.Sc., F.R.S.** (1871-1937), a distinguished Australian anatomist and archaeologist who was successively Professor of Anatomy in the University of Manchester, in the Egyptian Government School of Medicine, Cairo, in University College, London, and from 1933 until his death in Jan. 1937 Fulleren Professor of Physiology at the Royal Institution. He conducted brilliant researches on the structure of the mammalian brain, and stood in the front rank of comparative anatomists. His works include *The Royal Mummies* (1912), *Tutankhamen* (1923), *The Evolution of Man* (1924), and *The Diffusion of Culture* (1933).
- Smith, Captain John** (1580-1631), the noted seafarer and adventurer who in 1605 was the leading spirit of an expedition to Virginia, and founded Jamestown.
- Smith, Joseph** (1805-44), founder of Mormonism, son of a Vermont farmer. Claimed to have been granted revelation of the *Book of Mormon*, which came to be held as equal in authority and as a necessary supplement to the Scriptures. Smith, who was murdered, was not a polygamist; Brigham Young, who succeeded him, was. See Mormonism, Gen. Inf.
- Smith, Sydney** (1771-1845), an Anglican divine, who enjoyed a great reputation as a wit and writer. Founder of and contributor to the *Edinburgh Review* and author of *Peter Plymley's Letters*, supporting Catholic Emancipation.
- Smollett, Tobias George** (1721-71), a famous English novelist and humorist, whose *Roderick Random*, *Peregrine Pickle*, *Count Fathom* and

*Humphrey Clinker* abound in fun and genial characterisation, while their pictures of sea-life are inimitable.

**Smuts, Field-Marshal Rt. Hon. Jan Christiaan, O.M., C.H., K.C.** (1870-1950). South African soldier and statesman, one of the dominating political figures of our century. Born in Cape Colony, studied at Cambridge University, and called to the Bar. Was an outstanding Boer commando leader during the South African War, but afterwards worked for friendship with the British and took office in Botha's Government when the Union was set up in 1910. In the first world war joined the Imperial War Cabinet. As Prime Minister, 1912-24, helped to launch the League of Nations, and more recently was associated with the United Nations. Prime Minister, Foreign Minister and Minister of Defence from 1939 to 1948 when he was defeated at the General Election by the Nationalists under Dr. Malan. He was a keen botanist; Pres. of British Association, 1931. His book *Holism and Evolution*, published in 1926, was widely discussed in the scientific world.

**Smyth, Dame Ethel Mary, D.B.E., Mus. Doc., D.Litt.** (1858-1944), the most notable of British women musicians and conductors. Operas *The Wreckers* and *The Boatswain's Mate*.

**Snowden, Viscount, P.C.** (1864-1937), Chancellor of the Exchequer in the first Labour Government, 1924, and again, 1929-31; Socialist M.P. for Blackburn, 1906-18; Colne Valley, 1922-31; Lord Privy Seal, 1931-32.

**Snyders, Frans** (1597-1657), a great Flemish still-life and animal painter who studied under Breughel.

**Soane, Sir John, R.A.** (1753-1837), an eminent architect who designed numerous public buildings. By his will he left his museum, library, pictures, etc., for the use of the public, and the house in which he lived at Lincoln's Inn Fields still constitutes the Sir John Soane Museum.

**Sobieski, John III.** (1624-96), King of Poland from 1674, and heroic defender of his country from Cossacks, Tartars, and Turks.

**Socinus, Lælius** (1525-62), an Italian Protestant thinker and anti-Trinitarian, founder with his nephew Faustus Socinus (1539-1604), of the Socinian system of theology.

**Socrates** (469-399 B.C.), the distinguished Greek philosopher, was the son of a sculptor and for some time followed that calling himself, but, having other ambitions, joined the army, and was present at the battle of Potidæa, and also at the battle of Delium, saving the life of Alcibiades in the first, and of Xenophon in the second. Returning to Athens he devoted himself to study and began to exhort the people on public questions and the conduct of life. In 406 B.C. he was made one of the Senate of Five Hundred, and had other honours accorded him, continuing his teaching alternately with his public duties. Not long afterwards Anytus charged him with impiety and he was found guilty and sentenced to death. When the fatal day came he calmly drank the poison which terminated his career.

**Soddy, Prof. Sir Frederick, M.A., LL.D., F.R.S.** (b. 1877), Prof. of Inorganic and Physical Chemistry, Univ. of Oxford, 1919-36. Nobel Laureate in Chemistry 1921. The foundation of the isotope theory was laid by him in Glasgow about 1912 before the physicists became prominent in that field.

**Sokolovsky, Marshal Vasilij Danilovich, C.-in-C.** of Soviet occupation forces in Germany, 1946-49, First Dep. Min. of Armed Forces, 1949-.

**Solon** (638-558 B.C.) was one of the Seven Sages of Greece, and became an eminent legislator, after having made a reputation as a poet. Solon's Laws were so highly esteemed that they were adopted by the Romans in their Twelve Tables.

**Solyman** (1490-1566), the celebrated Ottoman Sultan known as "the Magnificent," who won fame as a conqueror, law-giver, administrator and patron of learning.

**Somerset, 1st Duke of** (1506-52), was Protector of England in the early part of the reign of Edward VI., but was deposed from power, tried for felony, and executed. A liberal and tolerant ruler who opposed enclosures and pursued a moderate religious policy.

**Sophocles** (495-406 B.C.), the famous Athenian dramatist who enjoyed the highest popularity

at Athens, and in a contest with Æschylus was crowned the victor. Of the 100-odd plays of Sophocles only seven have survived: *Antigone*, *Electra*, *Edipus*, *Ajax*, *Trachinice*, *Philoctetes*, and *Edipus at Colonus*.

**Soult, Marshal Nicolas Jean de Dieu, Duke of Dalmatia** (1769-1851), was one of Napoleon's favourite and most capable generals, distinguishing himself in the Swiss and Italian campaigns, and also in the Peninsular War, where he was Wellington's bravest opponent.

**Southey, Robert** (1774-1843), poet and author. In 1803 he went to live near Keswick to be near Coleridge where he resided until his death. In 1813 he was made Pct Laureate. In poetry he was overshadowed by the greater genius of Byron and Shelley, but in prose he was eminently successful, his *Life of Nelson*, his *Doctor, Commonplace Book*, and other works being as strong and vigorous as his verse was tame.

**Southwell, Robert** (1561-95), a famous Jesuit and religious poet of Elizabethan times. Beatified in 1929.

**Spaak, Paul-Henri** (b. 1899), Belgian statesman; Prime Minister 1946-49; first President of the U.N. General Assembly in 1946 and of the Assembly of the Council of Europe during its first session in 1949.

**Spaatz, General Carl Andrew** (b. 1891), held high commands in Europe, North Africa, and the Pacific, 1942-46; Commanding Gen. of U.S. Army Air Forces, 1946; Chief of Staff, U.S. Air Force, 1947-48.

**Spartacus, a Thracian** who became a Roman slave and gladiator in Capua, and headed an insurrection in Italy in 73 B.C. The slaves he raised routed several Roman armies, but he was eventually defeated by Crassus in 71 B.C. and slain.

**Speke, Capt. John Hanning** (1827-64), was the discoverer, along with Lt.-Col. J. A. Grant, of the Kagera, the main source of the White Nile, in 1862. In 1856 he discovered Lake Tanganyika and in 1858 Victoria Nyanza.

**Spencer, Herbert** (1820-1903), was the son of a Derby schoolmaster. For some time followed the profession of civil engineer. His first book was published in 1851, under the title of *Social Statics*, when he was filling the position of sub-editor of the *Economist*. In 1855 his *Principles of Psychology* appeared, in which he seems to have anticipated Darwin's theory of Evolution. The *System of Synthetic Philosophy* began to appear in 1860, and the last of its ten volumes was issued in 1896.

**Spencer, Stanley, C.B.E., R.A.** (b. 1891), British artist whose work shows great visionary and spiritual power. His paintings include the Resurrection pictures and the Cockham Regatta series.

**Spenser, Edmund** (1552-99), was born in London, educated at Cambridge, and early attracted notice by his poetic writings. After the publication of his *Shepherd's Calendar*, he was made known to Queen Elizabeth, and in 1580 received the appointment of Secretary to the Lord Deputy of Ireland, and in the division of confiscated lands that afterwards took place, Spenser received Kilcolman Castle and 3,000 acres of land. Here he wrote his *Faerie Queene*. In 1598 a rebellion broke out, and Spenser's castle was burned to the ground. He then returned to London, and there died.

**Spinoza, Baruch** (1632-77), the greatest modern pantheist, was born in Amsterdam of a Jewish family, but, having expounded philosophical doctrines antagonistic to Judaism, was excommunicated by the rabbis as a heretic. In 1663 he published his era-marking work on the Cartesian philosophy, from which he widely differed, and set forth a system of Pantheism which makes God the cause and substance of the universe, abolishes free-will, and establishes the necessity of the Divine nature. His *Ethics* was not published until after his death.

**Spurgeon, Rev. Charles Haddon** (1834-92), a renowned Baptist preacher.

**Squire, Sir John Collings** (b. 1884), English man of letters. He engaged in journalism, and edited the *New Statesman* 1913-18, and was the founder and editor of the *London Mercury*, 1919-34, with which his name is inseparably connected. A prolific writer, he published among other works *Grub Street Nights*, *Steps*

- to *Parnassus, Collected Parodies, American and other Poems, Outside Eden*, also many volumes of collected criticism.
- Stacpoole, Henry de Vere (1863-1951), novelist of Irish origin. Published several very successful stories, including *The Blue Lagoon*, a delightful romance of life on a South Sea island.
- Staël, Madame de (Anne Louise Germaine Necker, Baronne de Staël-Holstein) (1766-1817), the daughter of Necker, the famous Finance Minister under Louis XVI., was married to Baron de Staël (Swedish Minister) at twenty. She was a brilliant woman, deeply imbued with philosophical sentiments. Two years after her marriage she made a considerable impression by her *Letters on Rousseau*, and was regarded as in sympathy with the Revolution. Later on, however, she was in disfavour, first with the Revolutionary leaders, and then with Napoleon, and was in turn exiled by both and during this time wrote *Corinne* and other able works.
- Stalin, Generalissimo Joseph Vissarionovich (Djugushvili) (1879-1953), Soviet statesman who for nearly thirty years was leader of the Russian people. Studied for the priesthood at the Tiflis theological seminary. From the age of 17 was an active revolutionary and took important part in the civil war after 1917. After the death of Lenin became the outstanding figure in Russia and his aim to make Russia a great industrial power was carried into effect by modernizing agriculture on socialist lines and by a series of five-year plans, the first of which was introduced in 1929. Defended his country against the German invasion. Attended the allied war conferences at Teheran, Yalta and Potsdam. His published works in English include *Leninism, Problems of Leninism, The Great Patriotic War of the Soviet Union*.
- Stanford, Sir Charles Villiers, Mus. D. (1852-1924), Professor of Music at Cambridge University, and Professor of Composition and Orchestral Playing in the Royal College of Music. An organist and conductor of remarkable ability, and a composer of much fine instrumental, choral, operatic, and other music.
- Stanley, Sir Henry Morton, G.C.B. (1841-1904), English explorer, after an adventurous early career during which he fought for the Confederates in the American Civil War, joined the *New York Herald* as a correspondent in 1867 and was commissioned by Gordon Bennett to search for Livingstone. In 1871 he discovered the great missionary at Ujiji and with him explored the northern end of Lake Tanganyika. After further exploration he founded the Congo Free State in 1879. Among his books were *How I found Livingstone, Through the Dark Continent, In Darkest Africa*, and an *Autobiography*.
- Stanley, Colonel the Rt. Hon. Oliver Frederick George, M.C., M.P. (1896-1950), a leading Conservative politician. Colonial Secretary 1942-45.
- Stead, William Thomas (1849-1912), a famous English journalist and publicist, who founded the *Review of Reviews*, 1890. Was particularly famous for his anti-vice crusade in the *Pall Mall Gazette*, which led to his being imprisoned for three months in 1885. He wrote on an encyclopaedic range of subjects in attractive style. Was drowned in the *Titanic* disaster.
- Steele, Sir Richard (1672-1729). Born in Dublin, he was the son of a lawyer, who died while Steele was a child. Through family influence he was sent to the Charterhouse School (where he made Addison's acquaintance) and to Oxford and afterwards entered the Army and rose to be a captain in the Horse Guards. Then he drifted into literature, and wrote poems and pieces for the stage, but his first real success came when, in 1709, he began the publication of the *Tatler*, which made a great hit, Addison contributing many papers. Two years later he and Addison were associated in *The Spectator*. Addison, however, being the leading contributor; the *Guardian* was another of Steele's ventures. He sat in Parliament for some time, and was knighted by George I.
- Steer, Philip Wilson, O.M. (1860-1942), was the most distinguished of British landscape painters, and a fine portraitist.
- Stefansson, Vilhjalmur (b. 1879), a famous Arctic explorer, born in Manitoba of Icelandic parents. Studied Theology and Anthropology at Harvard.
- Took part in the Anglo-American Arctic expedition 1908-12 and led the Canadian Arctic Expedition 1913-18.
- Stein, Sir Aurel, K.C.I.E. (1862-1943), was a famous British archaeologist who conducted expeditions, chiefly to Chinese Turkestan, resulting in priceless additions to the British Museum and the Delhi Central Indian Museum. Explored Baluchistan, 1926-28, and South Iran, 1932-33. Was Superintendent of Archaeological Survey, North-West Frontier Circle, India, 1910-29.
- Stendhal, pseudonym of the French novelist, Marie Henri Beyle (1783-1842); *Le Rouge et le Noir, La Chartreuse de Parme*.
- Stephen (1105-54) was King of England from 1135 to his death, usurping the crown that belonged to Matilda, the daughter of Henry I.
- Stephen, Sir Leslie, K.C.B. (1832-1904), an eminent writer, critic and biographer. Edited the *Cornhill Magazine* (1871-82), and the *Dictionary of National Biography* (1882-91). Wrote *Hours in a Library*. Was the father of Mrs. Virginia Woolf (q.v.).
- Stephenson, George (1781-1848), was born at Wylam, near Newcastle, and up to 1804 was mainly engaged in ordinary colliery occupations. In 1804, however, an engagement as brakesman at Killingworth colliery brought him in touch with the working of Watt's steam engine, and his first efforts in invention were in improving one of those engines, showing so much ability that he was offered an engine-wright's position at Killingham, which he held for some time. Then it was that he began to think seriously of producing a locomotive engine, and managed to construct an engine that would draw coal trucks at the rate of four miles an hour. In 1821, when the Stockton and Darlington Railway was undertaken, he was appointed engineer, and when the railway was opened in 1825, as a line for the transport of coal only, Stephenson won his first great triumph, by putting a locomotive on the line that was able to draw a train of thirty-eight carriages, laden with goods and passengers, at a rate of twelve miles an hour. George Stephenson, subsequently, assisted by his son Robert, constructed the Liverpool and Manchester line, and after that the railway era commenced.
- Stephenson, Robert, F.R.S. (1803-59), the only son of George Stephenson, attained great eminence as a civil engineer, constructing numerous important railways and bridges, being designer and contractor for the High Level Bridge at Newcastle, the Menai and Conway Tubular Bridges, the Victoria Bridge across the St. Lawrence at Montreal, and two notable bridges over the Nile.
- Sterne, Laurence (1713-68), one of Britain's greatest humorists. His great work *Tristram Shandy*, the first two volumes of which were published in 1759, and the last in 1767, was so unique in character and so sparkling with wit and high spirits that, despite a certain coarseness, it made him famous. He also wrote *The Sentimental Journey*, and published some volumes of sermons.
- Stevenson, Robert, F.R.S.E. (1772-1850), a native of Glasgow, and famed as a builder of light-houses, including that on Bell Rock. He also invented the "flashing" system of throwing light at sea.
- Stevenson, Robert Louis (1850-94), was the Scottish author of a remarkable series of essays, stories, and poems, including *Travels with a Donkey, Virginibus Puerisque, Treasure Island, Kidnapped, Dr. Jekyll and Mr. Hyde, and A Child's Garden of Verse*. He always suffered from delicate health and travelled extensively, finally settling in Samoa with his Californian wife, formerly Mrs. Osbourne. His literary influence was considerable, particularly on the generation which followed him.
- Stinnes, Hugo (1870-1924), German industrialist who built up a huge coal-mining, iron and steel, and transport business, and also developed a large shipping concern. His group controlled the greater part of Germany's coal, iron and steel supply. In 1920 he entered the Reichstag, and later became a newspaper proprietor.
- Stokes, Sir George Gabriel, LL.D., F.R.S. (1819-1903), a distinguished Irish mathematician and physicist who became Lucasian Professor of Mathematics at Cambridge, 1849;

- Secretary of the Royal Society, 1854-85 (President 1885-90) and was President of the British Association, 1869. To him is due the modern theory of viscous fluids, while in optics his theory of diffraction opened up hitherto unexplored fields of research. Was the practical founder of the science of geodesy; the discoverer of the nature of fluorescence, and an original and brilliant investigator.
- Stopes, Marie Carmichael, D.Sc., Ph.D., F.L.S., F.R.L.S. (b. 1880),** an eminent woman scientist. Has published many works on birth control.
- Stowe, Harriet Elizabeth Beecher (1811-96),** the famous authoress of *Uncle Tom's Cabin*. Written to expose the horrors of slavery, it did much to advance the cause of abolition which the Civil War finally effected.
- Strachey, Rt. Hon. Evelyn John St. Loe (b. 1901),** Labour M.P. for Dundee West. Writer of lucid and vigorous books on socialist economics.
- Stradivari, Antonio (1644-1750),** an Italian maker of violins, first in his art in the world of all time.
- Stratford, Thomas Wentworth, Earl of (1593-1641),** the distinguished statesman, sent by Charles I. to Ireland as Lord Deputy in 1631. Was the founder of the Irish linen manufacture. He obtained the name of "Thorough" by his sweeping measures for asserting the King's authority, but was ultimately impeached on a variety of charges, found guilty, and executed.
- Strauss, David Friedrich (1808-74),** German theological writer, who made a great stir in the religious world by his *Life of Jesus*, published in 1835, which attempted to prove that the evangelical history mainly rested on a series of myths.
- Strauss, Johann (1804-49),** an Austrian composer and conductor, famous for his dance music, of which he produced some 250 pieces, many of them of a very high level. His son, Johann (1825-99), was even more distinguished in the same line as the composer of the *Blue Danube* waltz and nearly 400 other dance tunes; while a younger son, Eduard (1835-1916), became conductor of the Court balls at Vienna in 1870, and was responsible for well over 200 compositions; and yet another son, Joseph (1827-1870) composed some 270 dances. The famous Strauss band compelled the admiration of generations of music lovers in this country as well as in the capitals of the Continent.
- Strauss, Richard (1864-1949),** the son of a horn player in the Court Opera House at Munich, where he himself became conductor in due course, later being given the baton at the Royal Opera House, Berlin. He composed many charming songs, and won great distinction in the writing of elaborate instrumental music, operas, symphonies, etc.
- Stravinsky, Igor Fyodorovich (b. 1882),** a Russian composer; his compositions are highly original in structure; *Firebird* (1910), *Petroushka* (1912), *Les Noces* (1923). U.S. citizen, 1945.
- Stresemann, Gustav (1878-1929),** German statesman who was notable under the Weimar Republic. His conciliatory foreign policy was directed towards peace, and culminated in the Locarno Pact.
- Strindberg, Johan August (1849-1912),** Swedish dramatist, novelist, and poet of intense creative energy. His work is subjective and reflects his personal conflicts. He married three times but never happily. *Lucky Peter*, *Gustav Adolf*, *Till Damascus*, *The Father*, *Miss Julie* are among his works.
- Strong, Leonard Alfred George (b. 1896),** poet, novelist, short story writer, and critic. Author, among other books, of *Dublin Days*, *The Brothers*, and *The Last Enemy*, and with Cecil D. Lewis editor of *A New Anthology of Modern Verse*.
- Strydom, Johannes Gerhardus (b. 1893),** succeeded Dr. Malan as leader of the Nationalist Party and Prime Min. of South Africa, Dec. 1954.
- Stuart, Arabella (1575-1615),** daughter of the Earl of Lennox and cousin of James I., whose next heir she was both to the English and Scottish thrones. In 1610 she married William Seymour, afterwards Earl of Hertford and Duke of Somerset, and thereby incurring the king's displeasure, she was incarcerated in the Tower of London, where she died insane.
- Suckling, Sir John (1609-42),** wit, courtier, and poet; served under Gustavus Adolphus and in Charles I's first Scottish war (1639). Being concerned in a plot to rescue the Earl of Strafford from the Tower, he fled to France, where he may have killed himself. He wrote poems, ballads, songs, and prose work and is said to have invented cribbage.
- Sudermann, Hermann (1857-1928),** German dramatist, poet and novelist. His brilliant novel, *Frau Sorge* (1887), translated into English as *Dame Care* (1892), reached its 125th edition in 1912. From 1890 he produced a succession of realistic plays and novels.
- Sullivan, Sir Arthur Seymour, C.V.O. (1842-1900),** gifted composer, gained his first musical experiences as choir-boy at the Chapel Royal, and later studied at Leipzig. He composed oratorios but at the same time cultivated a lighter vein with pronounced success. Became famous for the light operas written in collaboration with W. S. Gilbert, which include *Trial by Jury*, *The Sorcerer*, *H.M.S. Pinafore*, *Pirates of Penzance*, *Patience*, *The Mikado*, *The Yeoman of the Guard*, *The Gondoliers*.
- Sully, Maximilien de Bethune, Duc de (1560-1641),** a French Protestant statesman, a friend and companion of Henry of Navarre. His *Memoirs* made notable reading.
- Sun Yat Sen, Dr. (1867-1925),** the founder and first President of the Chinese Republic, 1912, resigning almost immediately in favour of Yuan Shih Kai. Was the first graduate of medicine at Hongkong, 1891. Founded in 1905 the China Revolutionary League in Europe and Japan, and played a large part in the revolution of 1911, being elected President of the Southern provinces by the Nanking Convention in 1912.
- Sutro, Alfred (1863-1933),** author and dramatist. His most successful plays were *The Walls of Jericho* (1904) and *John Gayde's Honour* (1907).
- Swan, Sir Joseph Wilson, F.R.S. (1823-1914),** was born at Sunderland, and first became known as an inventor in photography, being the discoverer of the autotype process, and of the art of making rapid dry plates. Turning his attention to electric lighting he invented the incandescent electric lamp.
- Swedenborg, Emanuel (1689-1772),** Swedish philosopher, scientist, mystic. In later life he announced that Divine authority had been given him to explain natural and spiritual evidences. He published in quick succession *Arcana Celestia*, *The Apocalypse Revealed*, *Four Preliminary Doctrines*, and *The True Christian Religion*. He also claimed that his soul had been permitted to travel into hell, purgatory and heaven. His works became the scriptures of the sect named Swedenborgians.
- Swift, Jonathan, Dean (1667-1745),** was born at Dublin, educated at Trinity College at the expense of an uncle, became secretary to Sir William Temple, and looked for political preferment, but it did not come. Entering the Church, he was made Dean of St. Patrick's in 1713. Getting entangled in political controversy, and changing his views from the Whig to the Tory side, he lost favour with the popular party, but consoled himself with a devotion to literature, which he greatly enriched by some powerful satires, poems and discourses. *Gulliver's Travels*, *A Tale of a Tub* and *The Battle of the Books* are among the best-known works. His romantic attachment to "Stella" (Hester Johnson, whom he is believed to have married privately) and "Vanessa" (Esther Vanhomrigh), and their devotion to him, are familiar stories.
- Swinburne, Algernon Charles (1837-1909),** was educated at Oxford, and in the early 'sixties of last century gave to the world a number of poems of singular poetic beauty and musical charm, which procured him a high rank among English poets. Mr. Swinburne's most famous productions include *Atalanta in Calydon*, *Songs before Sunrise*, *Bothwell*, and *Mary Stuart*. Perhaps the best of his writings is his essay on William Blake.
- Swithin, St. (circa 800-862),** Bishop of Winchester in 852, and on the translation of his remains to a shrine in the interior of the cathedral from the graveyard, fixed for July 15th, 971, violent rain intervened, and, it is said, continued for forty days; hence the superstition as to rain upon St. Swithin's Day.
- Symonds, John Addington (1840-93),** acquired

fame as a poet and writer on *The Renaissance Period in Italy*.

**Synge, John Millington** (1871-1909), Irish poet and playwright. His best known work, *The Playboy of The Western World*, met with a hostile reception when first produced in Dublin in 1907, but English audiences were at once enthusiastic.

**Szigeti, Joseph** (b. 1892), famous Hungarian violinist, who made his debut in 1905, toured through Europe and settled for some years in England. He made an immense reputation on the Continent, and was Prof. at the Geneva Conservatorium, 1917-24.

**Szymanowski, Karol** (1833-1937), Polish composer and director of the Conservatoire at Warsaw.

## T

**Tacitus, Caius Cornelius** (55-circa 120). His chief claim to remembrance is that he was one of the ablest of Roman historians, and left behind him a number of works; among them a life of Agricola and his *Annales*, which have formed the ground-work of much that has since been written on the period he covered.

**Tacitus, Marcus Claudius** (205-276), the Roman Emperor who succeeded Aurelian in A.D. 275. His short reign was wise and marked by moderation.

**Taft, Wm. Howard** (1857-1930), Chief Justice United States 1921-30. President of the United States 1903-12.

**Tagore, Rabindranath** (1861-1941), a Bengal poet who won the Nobel Literature Prize in 1913.

**Talbot, William Henry Fox, F.R.S.** (1800-1877), English scientist who first discovered the principles of photography in 1833. Inventor of the calotype or Talbot-type process of which modern photography is a development.

**Talleyrand-Perigord, Charles Maurice de** (1754-1838), French politician and diplomat, led a mission to England in 1792 and was Foreign Minister from 1797 until 1807. He represented France at the Congress of Vienna.

**Tallis, Thomas** (c. 1510-85), a distinguished musician, who was, as organist, attached to the Chapel Royal under Henry VIII., Edward VI., Mary, and Elizabeth, and was the composer of some of the finest of our Church music.

**Tamerlane, or Timūr the Tartar** (1335-1405), descendant of a follower of Jenghiz Khan, and founder of the Mogul Dynasty in India. He succeeded as chief of the Berlas Turks in 1361, and in turn conquered Turkestan, Persia, and Syria. He was a masterful warrior, and a terrible butcher, the scourge of the East in his day, and, after establishing himself in India, died whilst preparing for the invasion of China. His familiar name is a corruption of Timūr-lenk = "Timūr the Lame."

**Tannhäuser, a mythical German minnesinger** of the 13th century, who belonged, according to the legend handled so romantically in Wagner's opera, to the Salzburg family of Tanhusen, and was the beloved of Lisaura.

**Tarkington, (Newton) Booth** (1869-1946), a leading American novelist, author of a wide variety of books, of which probably the best known is *Monsieur Beaucaire*, a sentimental romance, the dramatic version, in which he collaborated, achieving a great success.

**Tarquin Superbus** (or "the Proud"), the last King of Rome. Was banished 510 B.C. After his deposition came the Consuls.

**Tarquin the Elder, 5th King of Rome**, succeeded Ancius Mastius 615 B.C., reformed the laws, embellished the city, and was assassinated.

**Tasman, Abel Janszoon** (circa 1602-59), a famous Dutch navigator; in 1642 he discovered the island of Tasmania and New Zealand shortly thereafter.

**Tassigny, Jean de Latre de, Marshal of France**, Hon. G.C.B. (1890-1952), outstanding commander of the Free French Movement in Second World War; High Commissioner and C-in-C. Indo-China, 1950-52. C-in-C. Land Forces, Western Europe, 1948-50.

**Tasso, Torquato** (1544-95), was one of the great Italian poets of the 16th century.

**Tauber, Richard** (1893-1948), Austrian tenor, sang Mozart and German Lieder impeccably; made first appearance in England, 1931, in

Lehar's *The Land of Smiles* which brought him world-wide fame.

**Taylor, Brook, LL.D., F.R.S.** (1685-1731), an English mathematician of high attainments, who solved the problem of the centre of oscillation, and is best known as the discoverer of "Taylor's theorem."

**Taylor, James Henry** (b. 1873), one of the greatest golfers of all time, was five times Open Champion and founder and first chairman of the British Professional Golfers Association.

**Taylor, Jeremy** (1613-87), an English divine of great influence. The most famous of his works was his *Holy Living and Holy Dying*.

**Tedder, Marshal of the R.A.F., Arthur William**, 1st Baron, G.C.B., B.A. (b. 1890), was Deputy Supreme Commander under Eisenhower for the invasion of Europe, Chief of the Air Staff, 1946-48; Chairman, Western Europe Chiefs of Staff committee, 1948-50; Chancellor of Cambridge Univ. and Vice Chairman of the Governors of the B.B.C., 1952-54.

**Telford, Thomas** (1757-1834), was a Scottish working stone-mason who became a great engineer and attained special fame as a builder of bridges, the Menai Suspension Bridge being, perhaps, his greatest work. He constructed the Ellesmere Canal, made many hundreds of miles of difficult mountain roads, was chief engineer of the Caledonian Canal, and altogether did an immense amount of public work.

**Tell, William**, a legendary figure in Swiss folk-lore. The story of his having been compelled to shoot an apple from the head of his boy by Gessler and his dramatic revenge is regarded as a legendary feat which had been attributed on English territory to William of Clouesley, and had become a common Teutonic tradition before Tell's time. The Switzer hero of the Uri had, however, a great part in the strenuous struggle for Swiss independence in the early 14th century.

**Temple, Most Rev. Frederick** (1821-1902), a famous Anglican Churchman who became Headmaster of Rugby in 1858; in 1860 attained notoriety as the author of the first of the much-controverted *Essays and Reviews*, advocated the disestablishment of the Irish Church in 1868, was appointed Bishop of Exeter in 1869, translated to London in 1885, and in 1890 was raised to the Primacy. He made a strong Archbishop, and dominated the Church with his vigorous personality.

**Temple, Most Rev. William, P.C., D.Litt., D.D.** (1881-1944), one of the outstanding Christian leaders of his time and the son of Frederick Temple, was Archbishop of Canterbury, 1942-44, after being Headmaster of Repton, 1910-14, Bishop of Manchester, 1921-29, and Archbishop of York, 1929-42. His influence was felt among Christians of all denominations, and he strove for the unity of the Churches.

**Temple, Rt. Hon. Sir William, Bt.** (1628-99), English statesman and author; was Ambassador to The Hague in Charles II.'s time, and is understood to have been instrumental in bringing about the marriage between William of Orange and the Princess Mary. William III. twice offered him the position of Secretary of State, but he declined the honour, spending the years of his retirement at Moor Park (where Swift served him for a time as private secretary). Married Dorothy Osborne (1627-95), the letter-writer.

**Templer, Gen. Sir Gerald Walter Robert, G.C.B., G.C.M.G., K.B.E., D.S.O.**, Chief of the Imperial General Staff since Nov. 1955, formerly High Commissioner and Director of Operations in Malaya.

**Templewood, Samuel John Gurney Hoare, 1st Viscount, P.C., G.C.S.I., G.B.E., C.M.G.** (b. 1880), Conservative politician; Sec. of State for Air, 1922-29; Sec. of State for India, 1931-35; Foreign Sec., June-Dec. 1935; Home Sec., 1937-39; Special Ambassador to Spain, 1940-44.

**Teniers, David (the younger)** (1610-94), was born at Antwerp, and his paintings of the old rustic Flemish life are unsurpassed in their humour and fidelity. He died at Brussels. His father, David Teniers the elder (1582-1649), was also one of the leading landscape painters of the time.

**Tenniel, Sir John** (1820-1914), for over fifty years leading artist of *Punch*, illustrated numerous books, including *Alice in Wonderland*.

**Tennyson, Alfred Lord** (1809-92), was Poet

- Laureate from 1850 to his death. Born at Somersby, in Lincolnshire, he showed poetic gifts while quite young, and in 1827, joined his brother Charles in the publication of *Poems by Two Brothers*. In 1830 and 1832 he again appeared before the public, the two small volumes of those years, written entirely by himself, serving to mark him out as one of the coming men in poetry. It was not until 1842 that he was again attracting attention with two volumes; but these more than confirmed previous promise. In 1847 he published *The Princess*; in 1850 *In Memoriam*, a poem of great beauty and depth of thought, in which he enshrined his affection for the memory of his dead friend Arthur Hallam; and in 1855 *Maud* appeared. His other works include *The Idylls of the King*, *Enoch Arden*, *Queen Mary*, *Harold*, and *Becket*.
- Terence, Publius Terentius Afer (circa 194-158 B.C.), a Roman poet and dramatist, who rose from the position of a slave to that of one of the most honoured men in Rome.
- Teresa, St., or Theresa (1515-82), a Spanish saint and author, born at Avila, entered the Carmelite order in 1534, established a reformed order in 1562, became famous for her ascetic life and mystic visions, and died at Alba de Liste. Her religious writings include *The Way of Perfection* and *The Castle of the Soul*. She was canonised by Pope Gregory XV.
- Terry, Dame Ellen, G.B.E. (Mrs. James Carew) (1848-1928), one of the most distinguished of English actresses. Played Shakespeare with Sir Henry Irving at the Lyceum and later appeared in plays of Bernard Shaw, who was her friend.
- Tertullian, Quintus (circa 150-230), a Father and writer of the Latin Church. His chief work was his *Apologeticus*, a defence of Christianity.
- Tetrazzini, Luisa (1871-1940), was an Italian prima donna who sprang into sudden prominence in 1907 by her wonderful singing at Covent Garden. She was hailed as a second Patti, and achieved a brilliant success.
- Tetzl, John (c. 1460-1519), the German Dominican monk and Inquisitor, the scandal of whose sale of indulgences roused Luther to publish his memorable ninety-five theses at Wittenberg in 1517, and led up to the Reformation.
- Thackeray, William Makepeace (1811-63). His first ambition was to be an artist, he seriously proposed to be an illustrator of Dickens's works, but he never got much beyond the amateur stage in pictorial work, the drawings he made to illustrate some of his own novels being crude and inefficient. As a humorist and novelist he, however, attained high rank. To *Fraser's Magazine* and to *Punch* he contributed a large number of burlesques, sketches, poems, etc., all full of spirit and fun; but it was not until later life that his greatest successes were won. *Vanity Fair*, which was issued in monthly parts between 1846 and 1848, proclaimed him a master in the realm of fiction. *Pendennis*, *Esmond*, *The Newcomes*, *The Virginians*, *Philip and Love* the *Widower* make up the main of his finished stories, and English literature is all the richer for them. He edited the *Cornhill Magazine* from the first number, January, 1860, for a few years his most notable contributions being his *Roundabout Papers*. His *Yellowplush Papers* and *The Book of Snobs* (republished under *Punch*) were widely read and admired; and the lectures he delivered in America on *The Four Georges* were pungently powerful.
- Thales of Miletus (circa 640-546 B.C.), a geometer, astronomer, and philosopher, and one of the seven wise men of ancient Greece. The earliest of the Ionian philosophers, he created a sensation by the pre-calculation and prediction of an eclipse of the sun, which took place 585 B.C., and he looked upon water as the basis of all material things.
- Themistocles (c. 514-449 B.C.), Athenian soldier and statesman. By fortifying the harbour of Piræus as the port of Athens, by the remission of taxes on aliens, and by the creation of the Athenian navy, he established Athenian prosperity and made possible the later Athenian empire. Defeated the Persian fleet at Salamis in 480 B.C.
- Theocritus (285-247 B.C.), one of the great Greek poets. Thirty *Idylls* have come down to us and a number of *Epigrams*.
- Theodoric the Great (455-526), a celebrated King of the East Goths, born at Pannonia. In mediæval German romance he is known as "Diëtrich von Bern," and had a reputation for good government, akin to that ascribed in England to King Alfred. He was the founder of the Gothic Kingdom of Italy.
- Theodosius the Great (346-95) was Roman Emperor of the East for nearly twenty years. He gained victories over the Goths, and the year before his death became sole Emperor. Noted in ecclesiastical history for his conversion to Christianity, and for his submission to the penance imposed by St. Ambrose.
- Theophrastus (circa 372-287 B.C.), succeeded Aristotle as President of the Lyceum at Athens. His *History of Plants* and his *Moral Characters* are the best known of his writings.
- Thibaud, Jacques (b. 1880), famous French violinist.
- Thierry, Jacques Nicolas Augustin (1795-1856), a distinguished French historian, known by his *History of the Norman Conquest*.
- Thiers, Louis Adolphe (1797-1887), a French statesman and man of letters, author of *History of the French Revolution*.
- Thomas, Dylan (1914-53), Welsh poet whose *Eighteen Poems* (1934) brought him instant recognition as an original and gifted artist. Other works include *Twenty-five Poems* (1936) and *Deaths and Entrances* (1945).
- Thomson, James (1834-82), a Scottish poet who wrote *The City of Dreadful Night*.
- Thomson, Sir (John) Arthur (1861-1933), was a well-known biologist.
- Thomson, Sir Joseph (John), O.M., D.Sc., F.R.S. (1856-1940), physicist and mathematician; Master of Trinity College, Cambridge, 1918-40; Cavendish Prof. of Experimental Physics, Cambridge, 1884-1919. Awarded Nobel Prize in 1906 for his work on conduction of electricity through gases; also discovered the electron. Wrote learnedly on electricity, magnetism, radio-activity, etc. His son, Sir George Paget Thomson, F.R.S., is also a physicist and Nobel Prizeman; Master of Corpus Christi College, Cambridge.
- Thoreau, Henry David (1817-62) was a natural philosopher and nature-worshipper, who forsook trade and devoted himself to a primitive kind of existence in the American woods. He was the friend of, and for a time lived with, Emerson, but in 1845 adopted his career of solitude, and pursued those studies of nature which afterwards gained him a high reputation. His *Walden*, or *Life in the Woods*, is a unique book.
- Thorez, Maurice (b. 1900), Secretary General of the French Communist Party.
- Thorncliffe, Dame Sybil, D.B.E., LL.D. (b. 1885), a celebrated British actress. She had a great success in *Macbeth*, also in G. B. Shaw's *St. Joan* and in several Greek tragedies. Wife of Sir Lewis Casson, the actor.
- Thornycroft, Sir John Isaac, LL.D., F.R.S. (1843-1928), founded the well-known Thornycroft shipbuilding works at Chiswick in 1866, where he built many noted high-speed vessels, and in later years devoted much attention to the improvement of motor vehicles.
- Thornycroft, Sir William Hamo, R.A. (1850-1925), English sculptor whose works include the Gladstone Memorial, the statue of General Gordon in Trafalgar Square, of Queen Alexandra in the Royal Exchange, Lord Granville in the Houses of Parliament, Cromwell at Westminster, and John Bright in Rochdale.
- Thorpe, Sir (Thomas) Edward, C.B., Ph.D., D.Sc., F.R.S. (1845-1925), a noted English chemist. His chief research work was done on paraffin hydrocarbons, and the derivatives of fluorine and phosphorus. Was the author of a standard *Dictionary of Applied Chemistry* and a *History of Chemistry*.
- Thorwaldsen, Bertel (1770-1844), a famous Danish sculptor.
- Thucydides (c. 460-399 B.C.), the first scientific historian, was an Athenian and took part in the Peloponnesian War, about which he wrote his *History*. Attempted an impartial account, weighing the testimony of eye-witnesses and keeping to carefully verified facts. The

- History* is a graphic narrative, but Thucydides was not merely a chronicler; he saw the general significance of particular events and wished to pass on the political lessons of the past to the future. The speeches which he put into the mouths of the various actors reveal the political ideas and climate of opinion of contemporary Greece, and include the famous Funeral Oration of Pericles.
- Tiberius, Claudius** (42 B.C.-A.D. 37), the second Emperor of Rome, had an evil reputation but was an able ruler and successful soldier. Spent his later years in Capri.
- Tiffin, Arthur Ernest** (1896-1955), succeeded Arthur Deakin as general secretary of the Transport and General Workers' Union in 1955.
- Tillett, Benjamin** (1860-1943), M.P. for North Salford 1917-24 and again 1929-31, came into prominence in the great dock strike of 1889. He was the organiser and secretary of the Dockers' Union; for several years alderman of the L.C.C.; and an active labour leader. Chairman of the General Council T.U.C. 1928-29.
- Tillotson, John** (1630-94), a celebrated preacher at Lincoln's Inn, "Popery" and "Atheism" being the main objects of his attacks: in 1691 became Archbishop of Canterbury.
- Tindal, Matthew** (c. 1653-1733), noted English Deist.
- Tintoretto (Jacopo Robusti)** (1518-94), the famous Venetian painter, whose numerous religious pictures are of great value and interest. His real name was Jacopo Robusti, and he received the cognomen of Tintoret, or Tintoretto, from his father's avocation, that of a dyer.
- Titian, or Tiziano Vecelli** (1477-1576), one of the greatest of painters. He studied under the Bellinis, and made his first essays in painting for the public in conjunction with Giorgione, whom he soon surpassed. In 1511 he was at Padua, where he painted some notable frescoes; in 1512 he was back in Venice, with a studio on the Grand Canal, employed on important commissions. From this time forward he was in great demand, and exercised his marvellous powers almost to the end of his life, dying of the plague at ninety-nine.
- Titians (or Tietjens), Teresa** (1831-77), a famous German operatic prima donna and concert-room singer.
- Titu, Marshal (Josif Broz)** (b. 1892), Prime Minister of the Federal People's Republic of Yugoslavia since 1945. Leader of the partisan forces which successfully fought against German occupation. President National Liberation Committee, 1943.
- Titus** (40-81), the Roman Emperor, and son of Vespasian. Attained great renown by his successful part in the Jewish war which terminated in the capture and destruction of Jerusalem: he was deemed a profligate and a tyrant, but no sooner was he in sole power than he exerted himself to the utmost to please the people, completed the Colosseum, gave plenty of exhibitions, built splendid baths, and otherwise made himself popular.
- Tizard, Sir Henry Thomas, G.C.B., F.R.S.** (b. 1885), scientist and administrator. President of the British Association, 1948. Played important part in the higher scientific direction of the second world war.
- Tocqueville, Alexis, Comte de** (1805-59), author of *De La Démocratie en Amérique* and *De L'Ancien Régime*, which set out nineteenth-century liberal ideas and are also useful historical sources.
- Tolstoy, Count Leo Nikolayevitch** (1828-1910), was the most distinguished personality in modern Russian literature. Born of a good family, he was for a time in the army, but was so greatly moved by the trials and sufferings of the people that, out of pure sympathy of heart, he was impelled "to take up his pen and write." At twenty-four he published his *Childhood*, and in 1854, while in camp in the Crimea, wrote his *Tales from Sebastopol*, which procured him considerable literary fame. Later on he was a persistent advocate of progressive ideas, and, before the Emancipation Act for freeing all Russian serfs was enforced, he himself had given the serfs on his own estate their freedom. In 1862 he married, and settled down to a quiet country life, shortly afterwards publishing his *War and Peace* and *Anna Karenina*. In his latter years Tolstoy developed a sort of religious mysticism. Among his later works are *The Power of Darkness*, *The Kreutzer Sonata*, *The Cossacks*, *Resurrection*, and *The End of the Age*.
- Tone, Theobald Wolfe** (1763-98), the Nationalist agitator who founded the Society of United Irish men in 1791. Being refused death by shooting, he escaped hanging by cutting his throat.
- Tooke, John Horne** (1736-1812), English politician and pamphleteer, was a supporter of Wilkes and later of Pitt. His tracts advocated reform. After the French Revolution was tried for high treason, but was acquitted.
- Toole, John Lawrence** (1832-1906), for half a century a popular English comedian.
- Torquemada, Tomas de** (1420-98), the chief officer of the Spanish Inquisition.
- Torricelli, Evangelista** (1608-47), Galileo's pupil. He invented the barometer and improved both the microscope and the telescope.
- Toscanini, Arturo** (b. 1867), famous Italian conductor, La Scala Theatre, Milan, 1898-1908 and 1920-29; at the Metropolitan Opera House, New York, 1908-15; and of the Philharmonic Symphony Society of New York, 1926-36. Returned to Milan in 1946 after a ten-year exile. Retired, 1954.
- Tosti, Sir (Francesco) Paolo, K.C.V.O.** (1847-1916), a famous Anglo-Italian composer and song writer. *Good-Bye, Ask Me No More*, and *For Ever*.
- Toulouse-Lautrec, Henri de** (1864-1901), French painter, whose pictures portray with stark realism certain aspects of Parisian life in the nineties.
- Tovey, Sir Donald Francis, Mus. Doc.** (1875-1940), was a noted British musician, who as a child showed remarkable ability both as a pianist and in his mental grasp of the art of music. His chief composition is Concerto in A for piano and orchestra.
- Toynbee, Arnold** (1852-83), after graduating at Oxford, devoted himself to practical philanthropy and social reform. From his self-denying efforts sprang the settlement in East London—Toynbee Hall.
- Toynbee, Arnold Joseph, Hon. D.Litt** (Oxford, Cambridge, and Birmingham) (b. 1889), eminent scholar and historian, nephew of above. Dir. of Studies Royal Inst. of Int. Affairs, 1925-55. Major work *A Study of History* (10 vols.) was completed in 1954.
- Trajan (circa 52-117)** was Roman Emperor from 98 to his death. His rule was enlightened, and he was esteemed by the people.
- Tree, Sir Herbert Beerbohm** (1852-1917), the London actor-manager who scored successes at the Haymarket and His Majesty's Theatres.
- Trenchard, Marshal of the R.A.F., Viscount, G.C.B., O.M., G.C.V.O., D.S.O.** (1873-1956). Chief of Air Staff, 1918-29; Chief Commissioner of Police, 1931-35; often known as the father of the Air Force and largely responsible for the establishment of the R.A.F. College at Cranwell and the Hendon Police College.
- Trent, 1st Baron, of Nottingham (Jesse Boot)** (1850-1931), founder of Boots Cash Chemists, Ltd.; a great benefactor of Nottingham, especially of the University of Nottingham.
- Trevelyan, George Macaulay, O.M., C.B.E.** (b. 1876), English historian, son of Sir George Otto Trevelyan and great nephew of Thomas Babbington Macaulay. Regius Professor of Modern History at Cambridge 1927-40; Master of Trinity College, 1940. Chancellor of Durham University, 1949. His chief works are: *History of England*; a trilogy of books on *Gari-baldi*; *England under the Stuarts*; *England under Queen Anne*; *Grey of Palladoon*; *English Social History*; *An Autobiography and other Essays*.
- Trevelyan, Rt. Hon. Sir George Otto, 1st Bt., O.M.** (1838-1928), Liberal statesman and historian. Became Chief Secretary for Ireland in 1882, and was later Secretary of State for Scotland. Wrote a biography of his uncle, Lord Macaulay, which was highly praised. Father of Professor G. M. Trevelyan.
- Trevithick, Richard** (1771-1833), a Cornish mine-manager's son, who invented the road-locomotive, putting upon the highway on Christmas Eve, 1801, the first steam-propelled vehicle for passengers.
- Trollope, Anthony** (1815-81), author of many

- novels. His Barchester series depicts a number of scenes of higher clerical life with great fidelity and success.
- Trotsky, Leon**, name assumed by Lev Davidovich Bronstein (1879-1940), one of the leaders of the Bolshevik revolution. War Minister of the Bolshevik Government and its leading representative at the Brest-Litovsk conference of 1917-18. He differed from the Communist Party on policy and was dismissed from office in 1925. In 1929 took up exile in Mexico where he was assassinated.
- Truman, Harry S.** (b. 1884), President of the United States, 1945-52. Inherited the Presidency on the death of Roosevelt in 1945 and won the Pres. election in 1948. Outspoken supporter of the New Deal and the rights of Labour. He took the historic decision to enter Korea in 1950, dismissed Gen. MacArthur in 1951, and will perhaps best be remembered for his "Point Four" programme of raising levels of living in backward and under-developed countries.
- Tschaikovsky, Peter Ilyich** (1840-93), a Russian musical composer of great force and originality. He excelled in several branches of composition, and many of his works are well known in Britain. They include operas, ballets, symphonies, piano concertos, and other orchestral works.
- Turenne, Henri de la Tour d'Auvergne, Vicomte de** (1611-75), a famous French commander and Marshal of France, who was highly successful in the Thirty Years' War.
- Turgenev, Ivan Sergeyevich** (1818-83), was a friend of Gogol and Tolstoy (*qq.v.*), and a famous Russian novelist and short-story writer, the first of his country to achieve international fame. His works were frequently satirical and directed against the oppression of the peasants by the nobles. Was the inventor of the term "nihilist" to describe the Russian anarchist movement.
- Turner, Joseph Mallord William, R.A.** (1775-1851), was the son of a London barber, but while quite a child showed the possession of artistic genius. In 1789, after some miscellaneous schooling, he entered the Royal Academy classes, and soon began to make headway. Of his larger pictures may be mentioned *The Sun Rising through Vapour*, *Crossing the Brook*, *Dido Building Carthage*, *The Fighting Temeraire*, and *Calais Pier*. Ruskin, in his *Modern Painters*, wrote with great eloquence and critical insight regarding Turner's work, and brought about a fuller appreciation of his genius. He never married, and took little interest in anything outside his art. He left the oil paintings and drawings he had preserved to the National Gallery.
- Tussaud, Madame Marie** (1760-1850), a Swiss who, while practising the art of modelling wax in Paris at the time of the French Revolution, made her escape to England and set up a small exhibition of wax figures in the Strand, later carried on by her son, grandson and great-grandson at Baker Street and in 1884 transferred to Marylebone Road.
- Tut-ankh-amen** (circa 1350 B.C.), an Egyptian Pharaoh of the 18th dynasty, whose tomb was discovered by Howard Carter in 1922, with the mummy intact. The magnificence of the coffins and ornaments, together with large quantities of furniture, etc., of that time, caused world-wide interest. Died at age of about 18 years.
- Twain, Mark.** (*See Clemens, Samuel L.*)
- Tweedsmuir, John Buchan, 1st Baron, C.H.** (1875-1940), Gov.-Gen. of Canada 1935-40, journalist, politician, and author, wrote numerous biographies, historical novels, and adventure stories, including *Montrose*, *The Path of the King*, *Greenmantle*, and *Sick-Heart River*, and an autobiography *Memory Hold the Door*. Under the pen name "O. Douglas," his sister, **Anna** (d. 1948), published some charming tales of domestic life.
- Tyler, Wat** (d. 1381), the leader of the peasants' revolt of Richard II.'s time against the iniquitous poll-tax. Over 100,000 peasants followed Tyler into London in June 1381, and the king met them in Smithfield and made promises of redress that were never fulfilled. It was at this meeting that Sir William Walworth, Lord Mayor of London, stabbed Tyler with a dagger, and afterwards handed him over to his followers to kill outright.
- Tyndale, William** (c. 1492-1536), was educated at Oxford, and conceived a strong desire to be the medium of presenting the Bible to his countrymen in their own language. He completed the translation of the New Testament at Wittenburg, where he was associated with Luther. This version was first published at Antwerp, and then found its way to England, where it was publicly burnt at St. Paul's Cross. Tyndale afterwards was associated with Miles Coverdale in a translation of the Old Testament, but only completed the Pentateuch and the book of Jonah. Antwerp was Tyndale's retreat during this later period, and in 1535 he was arrested for heresy and put to death by strangling and burning.
- Tyndall, Prof. John, F.R.S.** (1820-93), was an eminent scientist. His books on light, sound, and heat are well-known text-books.

## U

**Ulanova, Galina**, Russian ballet dancer, made her debut in 1928 and is the world's greatest living exponent of the art. She danced in Florence in 1951.

**Undset, Sigrid** (1882-1949), a Norwegian novelist who established her reputation after the publication of her novel *Jenny* in 1912 as one of the most outstanding Scandinavian writers of her time and is known by her principal study of Scandinavian life in the Middle Ages. Was awarded the Nobel Prize for Literature, 1928.

**Unwin, Sir Raymond** (1863-1940), English architect and expert on Town Planning, who became known as the architect of the first garden city at Letchworth, and of the Hampstead Garden Suburb.

**Ursula, St.**, is said to have been an English princess, who with 11,000 virgins set out on a pilgrimage, but compelled by a fierce storm to take refuge in Cologne, was there put to death with her following by an army of Huns.

## V

**Valentine, St.**, was a Christian martyr of the reign of the Emperor Claudius II (d. 270 A.D.). His festival was commemorated on February 14 before Gregory the Great's time. The custom of sending valentines had its origin in a heathen practice associated with the worship of Juno about this date in the calendar, and had no connection with the saint.

**Valentino, Rudolph** (1895-1926), whose real name was Rudolph Alphonso Guglielmi di Valentino d'Antongueita, an Italo-American film actor who made his screen debut as Julio in *The Four Horsemen of the Apocalypse* in 1922, his success being enormous. His good looks, grace, virility and great dramatic talents made him the idol of countless men and women.

**Vambéry, Arminius** (1832-1913), a celebrated Orientalist and traveller.

**Vanbrugh, Sir John** (1664-1726), was a prominent architect as well as a successful dramatist.

**Vancouver, George** (1758-98), a British navigator who served under Captain Cook, and later explored the Gulf of Georgia and the Straits of San Juan de Fuca, as also the shores of Vancouver Island.

**Vanderbilt, Cornelius** (1794-1877), a noted American merchant and railway speculator who accumulated a fortune of twenty millions sterling. His son William Henry Vanderbilt (1821-85) inherited and added to it.

**Van Dyck** (or Vandyke), Sir Anthony (1599-1641), was born at Antwerp, and after studying under Rubens went to Italy and there made a name as a portrait painter. In 1629 he came to England on the invitation of Charles I., but remained only a short time; in 1631 Charles prevailed upon him to return, made him a knight, granted him an annuity, and he became the Society painter of the day.

**Vane, Sir Henry** (1613-62), was a prominent statesman and diplomatist. At the Restoration he was arrested as an enemy to the State and ultimately beheaded on Tower Hill.

**Van Gogh, Vincent** (1853-1890), Dutch painter of some of the most colourful pictures ever created. With passionate intensity of feeling he painted without pause whatever he found around him—

- landscapes, still-lives, portraits: his was a truly personal art. His life was one of pain, sorrow and often despair and in the end he committed suicide.
- Van Loon, Hendrik Willem** (1882-1944), Dutch-American historian, born in Rotterdam. Went in 1903 to the U.S.A., where he became a journalist, and then a teacher of history. He became famous in 1922 with the publication of *The Story of Mankind*, a picture history-book originally intended for children.
- Van Zyl, Rt. Hon. Gideon Brand** (b. 1873), Gov.-Gen. of South Africa, 1945-50.
- Vauban, Marshal Sebastien le Prestre de** (1633-1707), a renowned French military engineer who introduced great improvements in methods of fortification, conducted fifty-three sieges, and took part in 140 battles.
- Vaughan Williams, Ralph, O.M., M.A., D.Mus.** (b. 1872), English composer. After Charterhouse and Cambridge studied music in Berlin under Max Bruch and, later in Paris, under Ravel. Besides symphonies he has written a number of choral and orchestral works including *Sancta Civitas* and *Benedicite*, *Magnificat*, *Four Tudor Portraits*, *Dona Nobis Pacem*, operas including *Hugh the Drover*, *Riders to the Sea*, ballets, chamber music and songs. Has shown great interest in folk tunes.
- Velasquez, Diego** (1665-1523), a Spanish soldier and companion of Columbus, sent to conquer Cuba. Velasquez founded Santiago and Havana.
- Velasquez, Diego Rodriguez de Silvey** (1599-1660), a famous Spanish painter, whose pictures rank among the finest in Spanish art.
- Venizelos, Eleutherios** (1864-1936), the Greek patriot and statesman, suffered many vicissitudes of fortune during his career. A Cretan by birth, he became Prime Minister of Greece for the first time in 1910, and again on several subsequent occasions, but died in exile. Best known probably for his activity during the Balkan wars, his finally successful attempts to bring his country into the first world war on the side of the Entente Powers, and his ambitions in Asia Minor. At the post-war conferences in 1919 he exercised more influence than anyone else outside the "Big Four."
- Verdi, Giuseppe** (1813-1901), the most popular composer of Italian opera of the 19th century. His works include *Nabuccodonosor*, *I Lombardi*, *Ernani*, *Rigoletto*, *Il Trovatore*, *La Traviata*, *Aida*, *Otello*, and *Falstaff*.
- Verlaine, Paul** (1844-1896), French poet, also well known for his memoirs and confessions; died in great poverty and degradation in Paris.
- Vermeer, Jan** (1632-75), Dutch painter and the greatest of all the "Little Masters." Jan Vermeer of Delft, as he was frequently referred to, was born in Delft, and obtained considerable recognition in his lifetime, but strangely his existence was entirely overlooked after his death, and until 1860 his paintings were attributed to other Dutch painters. *Lady at the Virginals* is in the National Gallery.
- Verne, Jules** (1828-1905), was one of the most popular authors of wonder-stories in Europe. The best-known of his numerous works are *Five Weeks in a Balloon*, *Twenty Thousand Leagues Under the Sea*, *Round the World in Eighty Days*.
- Vernier, Pierre** (1580-1637), inventor of the small sliding scale which enables readings on a graduated scale to be taken to a fraction of a division.
- Veronese, Paul, or Paolo Cagliari** (1528-88), a celebrated Italian painter of religious subjects. His *Marriage Feast at Cana in Galilee*, *The Feast in the House of Simon*, and *The Presentation of the Family of Darius to Alexander*, are paintings of world-wide celebrity, while his *Adoration of the Magi*, in our National Gallery, is a grand work.
- Veronica, St.**, a legendary woman of Jerusalem, who was said to have handed to Christ her kerchief on His way to Calvary. The old belief was that the Redeemer wiped His brow therewith, leaving on the handkerchief a miraculous impression of His face, the so-called "Veronica." The Saint is commemorated on February 4th.
- Vespasian (Titus Flavius Vespasianus)** (9-79) was Roman Emperor during the last nine years of his life. At one time he commanded the Roman army of occupation in Britain.
- Vespucci, Amerigo** (1451-1512), Florentine merchant and navigator, who settled in Spain as commercial agent of the house of Medici. He made several voyages across the Atlantic and, according to his own accounts, which are disputed by many authorities, reached the American continent on June 16, 1497. A German geographer paid him the tribute of giving the name America to what is now known as South America in a map he published in 1507.
- Victor Emmanuel II.** (1820-78) was King of Sardinia from 1849 to 1861, became King of Italy, according to the Proclamation of the Sardinian Senate; but it was not until 1870, when the unification of Italy was fully secured, that the title came to have its true significance.
- Victoria** (1819-1901), Queen of Great Britain and Ireland and Empress of India, was daughter of the Duke of Kent, and came to the throne in 1837 on the death of her uncle, William IV. In 1840 she married Prince Albert of Saxe-Coburg-Gotha, who died in 1861. Lord Melbourne was Prime Minister at the date of the Queen's accession, and for a number of years the country lived through troublesome times, the Corn Law and Chartist agitations being at times very threatening, but a more settled condition of things supervened, and for the remainder of the long and illustrious Victorian reign there was no serious home unrest. The Jubilee of Queen Victoria's accession was celebrated in 1887, and the Diamond Jubilee 10 years later.
- Villeneuve, Pierre Charles Jean Baptiste Silvestre** (1763-1806), the French naval commander who was opposed to Nelson at Trafalgar and captured along with his ship, the *Ducentaure*.
- Villon, Francois** (1431-c. 1485), French poet who lived at a turbulent time in French history at the close of the Hundred Years War. His extant works consist of *Le Lais* (or *Petit Testament*) and *Grand Testament*, masterpieces of French medieval verse.
- Virgil (Publius Vergilius Maro)** (70-19 B.C.), the great Roman epic poet, was born near Mantua, and cultivated a farm in the adjacent village of Andes. He proceeded to Rome in his thirtieth year to obtain redress for the occupation of his lands by the military. Became known to Octavian and Maecenas, and, having had his demand satisfied, began the writing of his *Ecloques*. The *Georgics* followed; his most famous work, the *Aeneid*, comprised twelve books, dealing with the story of the wanderings of Aeneas after the destruction of Troy.
- Vitus, St.**, Roman Catholic saint and martyr, who lived in the 4th century. It used to be the custom to dance before his shrine on his festival day, June 15th, in the belief that good health was thereby ensured for the next twelvemonth. The nervous ailment, St. Vitus' dance, derives its name from this practice.
- Volta, Alessandro, Count** (1745-1827), Professor of Natural Philosophy both at Como and at Pavia University. In the course of his studies on electricity he discovered the voltaic pile, giving his name thereto, and also to the electrical unit, the volt.
- Voltaire, François Marie Arouet de** (1694-1778), one of the greatest of French philosophers and writers. His first essays offended the authorities, and he lived in London for a couple of years (1726-28), and there wrote some of his dramas. Returning to France, he published his *Philosophical Letters*, which aroused the enmity of the priesthood. At this juncture, the Marquise du Châtelet offered him the asylum of her castle of Cirey, and for the next fifteen years he made this his home, writing there his *Discourses on Man*, *Essay on the Morals and Spirit of Nations*, *Age of Louis XIV.*, &c. From 1750-53 he lived in Berlin, on the invitation of Frederick the Great.
- Vondel, Joost van den** (1587-1679), the greatest of the Dutch poets. Most of his dramas are on biblical subjects, and the two most famous are *Jephtha* and *Lucifer*.
- Voroshilov, Marshal of the Soviet Union Klimentiy Efremovich** (b. 1881), President of the Supreme Soviet of the U.S.S.R. since Stalin's death in 1953; commander of the Leningrad defences in 1941.
- Vyshinsky, Andrei Yanuarievich** (1883-1954), Permanent Soviet Representative at U.N. Acted as either prosecutor or judge at many notable trials and became deputy to Molotov on the outbreak of war in 1939.

## W

- Waddell, Helen** (b. 1889), scholar and author, whose works include *The Wandering Scholars, Medieval Latin Lyrics* (a translation), and *Peter Abelard*.
- Wade, George** (1668-1748), military engineer who after the Jacobite rebellion of 1715 commanded the royal forces in Scotland and constructed the great military roads through the Highlands, some of which have continued to be the main lines of communication. Promoted to Field-Marshal in 1743 and in 1744 George II made him Commander-in-Chief in England. In the last Jacobite rising of 1745 his army was the first to be evaded by the Young Pretender, Charles Edward, on his famous march south.
- Wagner, Wilhelm Richard** (1813-83), born at Leipzig, was the composer who exerted the greatest influence upon musical art during the 19th century. He revolutionised operatic methods, and doing away with set ballads and choruses, endeavoured to give the same unity of action to an opera as would be realised in a play without music. This continuity of musical thought and action was a long time in forcing itself into acceptance, but to-day is acknowledged as the only adequate interpretation of dramatic musical expression. Wagner fought for his position with great pertinacity and courage, but it was not until the King of Bavaria enabled him to indulge his aims to their fuller development that he realised his ambition. At the famous opera house at Bayreuth were produced all the later Wagnerian operas of the *Ring des Nibelungen* tetralogy. His last work, *Parsifal*, given in 1882, shows the fullness of his powers. In 1870 married Cosima (1837-1930), daughter of Liszt.
- Wakefield, Edward Gibbon** (1796-1862), British colonial statesman who played an important part in the colonisation of South Australia, 1836. Through his action Britain anticipated France in annexing New Zealand, 1839.
- Waley, Arthur, C.H., C.B.E., M.A.**, orientalist, well known for his translations of Chinese and Japanese poetry and prose, being the first to bring the literature of those countries to the western world.
- Walker, George** (1618-90), the hero of the siege of Londonderry, in 1688, who kept the besiegers at bay for 105 days.
- Wallace, Alfred Russell, O.M., F.R.S., LL.D.** (1823-1913), celebrated naturalist, a native of Usk, attracted much notice as far back as 1853 by his book *Travels on the Amazon*, detailing his experiences in that region. In 1858, while down with illness in the Moluccas, the idea of the evolution theory occurred to him, and curious to say, he drafted his first notes upon it and sent them to Darwin in England while the latter was on the eve of publishing his own exposition of the theory, the result being the reading of a joint paper on the subject to the Linnean Society. The coincidence was fully acknowledged by Darwin. There are differences, however, between the points of view of the two thinkers.
- Wallace, Edgar** (1875-1932), English novelist and playwright, famous for his detective thrillers. A man of enormous and unflagging energy, he published some 150 crime novels (of which as many as five million were sold in a year), 14 plays, film scenarios, dramatic criticism and a daily racing article.
- Wallace, Sir Richard, Bt.** (1818-90), son of the Marquis of Hertford, and inheritor from him of a famous collection of pictures and other works of art, to which he himself added largely. This was bequeathed to the nation by his widow along with Hertford House, and now forms one of the most important exhibitions in London.
- Wallace, Sir William** (circa 1270-1305), the great Scottish patriot and chieftain who led the Scottish armies against Edward I, and for a time the English were kept completely in check. Later, Edward defeated him at Falkirk, and finally in 1304 he was captured, taken to London, condemned for treason, executed at Smithfield.
- Wallenstein, Albrecht von** (1583-1634), German soldier and statesman during the Thirty Years' War. An able administrator of his own estates, he sought the unity of Germany, but was distrusted, possibly rightly, and was eventually assassinated.
- Waller, Edmund** (1606-87), was one of the most graceful of English poets, who tuned his lyre to suit both the Cromwellians when they were a power, and Charles II, when his turn came.
- Walpole, Horace** (1717-97), was the younger son of Sir Robert Walpole, filled a number of Government positions, and was a member of the House of Commons. He retired in 1768 to his favourite house at Strawberry Hill, and devoted himself to the writing of books and the accumulation of works of art.
- Walpole, Sir Hugh Seymour, C.B.E.** (1884-1941), was a well-known British novelist, whose novels included *Fortitude, The Dark Forest, Jeremy*, and *Mr. Traill*.
- Walpole, Sir Robert, K.G.** (1st Earl of Orford) (1676-1745), was the great Whig statesman of the early part of the 18th century. He resolutely opposed the South Sea scheme, and showed enlightened views of financial policy. He was Prime Minister for twenty-two years; he relieved from duty more than 100 export and 40 import articles, a policy which greatly extended the scope of British commerce.
- Walter, Bruno** (b. 1876), a noted conductor of German birth and American citizenship, associated especially with the opera in many different cities.
- Walter, John** (1776-1847), son of the founder of *The Times* and known as the second John Walter. Was the leading spirit of *The Times* from 1803 to 1847, and it was his efforts that made the journal the greatest newspaper in the world.
- Walton, Izaak** (1593-1683), one of the most lovable of English writers, the famous author of *The Compleat Angler, or the Contemplative Man's Recreation*. Also published lives of Donne, Hooker, and George Herbert.
- Walton, Sir William Turner** (b. 1902), English composer, whose works include concertos for string instruments, a symphony, the coronation march, *Crown Imperial*, and an oratorio, *Belshazzar's Feast*.
- Warbeck, Perkin** (1474-99), a Pretender to the English Crown. The son of a Tournaise Jew, he claimed to be Richard, Duke of York, supposed to have been murdered in the Tower, and therefore entitled to the throne of England in preference to its then occupant, Henry VII. The Duchess of Burgundy and Charles VIII. of France and James IV. of Scotland gave him their countenance. Warbeck was enabled in 1497 to appear in England at the head of a force of 7,000 men, but was easily defeated, tried for treason and hanged at Tyburn.
- Warner, Sir Pelham Francis** (b. 1873), the first man to be knighted for his services as a cricketer, captained Middlesex and England and has written many books on the game.
- Warwick, Richard Neville, Earl of** (circa 1428-71), "The King Maker," was the leader of the York party in the Wars of the Roses. At the battle of Northampton he made Henry VI. captive, and afterwards proclaimed Edward, Earl of March, king under the title of Edward IV. Then, when Edward showed a disposition to resent Warwick's protection, the latter drove Edward from the country and once more placed Henry VI. on the throne. He lost his life at the battle of Barnet.
- Washington, Booker T. Taliaferro** (1858-1915), a famous negro educationist who was Principal of Tuskegee Institute, Alabama, the first and greatest Institute for negro education, from 1881 until his death. He was a tireless worker for a better understanding between negroes and whites. Wrote several books, including his autobiography, *Up from Slavery*.
- Washington, George** (1732-99), was of English descent, and was living on his American estate at Mount Vernon when the dispute between the British home government and the colonists broke out. He became one of the leaders of the local opposition, and later was elected to the first Congress at Philadelphia. The following year, 1775, saw him Commander-in-Chief of the American army, and from that time to the end of the struggle in 1783 he was trusted and adored by the people, and on the founding of the Republic became its first President in 1789.

He served a second term of office from 1793 onwards, and refused election for a third time. Watson, John Broadus (b. 1878), American psychologist of international fame who formulated the theory known as Behaviourism, of which he became the leading exponent. It substantiates the work of the late Professor Pavlov.

Watson-Watt, Sir Robert, F.R.S. (b. 1892), physicist and engineer, meteorologist and journalist. Scientific adviser on radio subjects to Air Ministry and Ministries of Supply, Transport and Civil Aviation; Vice-Controller of Communications, Equipment, Min. of Aircraft Production, 1942-46. Chief of team of scientists engaged in radiolocation research which resulted in every aircraft and ship being equipped with radar aids enabling them to detect, locate and shadow enemy craft with great accuracy during the second world war. Awarded £50,000 for his radar work in the war.

Watt, James, F.R.S., F.R.S.E. (1736-1819). Born at Greenock, this genius was originally a mathematical instrument maker, and being brought into touch with mechanical problems, conceived the idea of the modern, that is, high-pressure steam-engine. Watt took out his first patent in 1769; the engine, however, was used only for mining operations until 1785, when it was applied to a cotton factory, Watt being greatly aided in his developments of the engine by the business ability of his partner, Matthew Boulton.

Watteau, Jean Antoine (1684-1721), a French landscape painter of transcendent ability, and especially great in *genre*. His shepherds and shepherdesses, rustic dance and fête scenes were wonderful for their harmonious brilliancy of coloration. His *chef-d'œuvre* is the *Embarkation for the Isle of Cytherus*, in the Louvre.

Watts, George Frederick, O.M., R.A. (1817-1904), occupied a unique place in English art. His works are numerous; among them may be mentioned *Love and Death*, *Hope* and *The Angel of Death*. He bequeathed to the nation a large number of his finest pictures. His portraits of Swinburne, Carlyle, Cardinal Manning, Browning, and Tennyson are especially fine.

Watts, Isaac (1674-1748), a great English hymn-writer; author of *O God, our help in ages past*.

Watts-Dunton, Walter Theodore (1836-1914), a prominent critic and close friend of Swinburne. Published *The Coming of Love* in 1897, and *Aylwin* in 1898.

Waugh, Evelyn Arthur St. John (b. 1903), English satirical writer, author of *Vile Bodies*, *Scott-King's Modern Europe*, *Brideshead Revisited* and *Life of Edmund Campion*, for which he was awarded the Hawthornden prize in 1936. His brother, Alec Waugh (b. 1898), is also a successful writer, the author of *The Loom of Youth*, *So Lovers Dream*, and *His Second War*.

Wavell, Field Marshal Earl, P.C., G.C.B., G.C.S.I., G.C.I.E., C.M.G., M.C. (1883-1950), Viceroy of India 1943-47; Com.-in-Chief India 1941-43; Com.-in-Chief British Forces in Middle East 1939-41; previously Southern Command 1938-39 and of troops in Palestine 1937-39. Described as one of the cleverest generals in the British Army, his strategy against the Italians in the winter campaign of 1940-41 was brilliantly successful.

Webb, Sir Aston, G.C.V.O., C.B., R.A. (1849-1930), President of the Royal Academy, 1919-24, one of our foremost architects, and the designer of the general scheme of the Victoria Memorial in front of Buckingham Palace, the new Birmingham University, the Britannia Naval College at Dartmouth and other fine structures.

Webb, Matthew (1848-88), in 1875 swam the English Channel in twenty-two hours, and was drowned eight years later in an attempt to swim through the Niagara rapids.

Webb, Rt. Hon. Sidney James, O.M. (1859-1947), eminent Socialist, one of the founders of the Fabian Society in 1884. Sec. of State for the Colonies 1929-31, and for the Dominions, 1929-30. Pres. of Board of Trade in first Labour Government, 1924. His wife Beatrice, equally with himself, was a great investigator and writer on political and economic affairs. Among their books were *History of Trade Unionism*, *English Local Government* and *Soviet Com-*

*munist*. He founded (1913) and edited (till 1922) the *New Statesman*. Raised to the Peerage, 1929, as Lord Passfield.

Weber, Carl Maria Friedrich Ernst von (1786-1826), German composer, who has usually been considered the founder both of the German and of the romantic schools of opera. His fame rests principally on the operas *Der Freischütz*, *Euryanthe*, and *Oberon*, the last of which was written for Covent Garden. He worked in many cities, studying at Vienna under Abbé Vogler, and was pianist, conductor, and musical director as well as composer.

Webster, Daniel (1782-1852), an American, who, as statesman, lawyer, and orator, exerted enormous influence on American constitutional ideas and practice. Served twice as Secretary of State and in 1842 negotiated the Ashburton Treaty which settled the Maine-Canada boundary.

Webster, Noah (1758-1843), the American lexicographer and grammarian. Author of the *Dictionary of the English Language*, and works on literary and political themes.

Wedgwood, Josiah, F.R.S. (1730-95), was the most famous of English potters. He was born at Burslem, served an apprenticeship that carried him through all the branches of the trade, and in 1759 was able to set up in business for himself with money he had saved. He persevered through failure after failure, and in a few years produced such an improved form of ware that it came into great demand. He engaged Flaxman to make classical designs for him, and his pottery became the fashion, and led to a great extension of the Staffordshire earthenware industry.

Weingartner, Dr. (Paul) Felix (1863-1942), was a famous Austrian composer and conductor who soon became known throughout the world as a conductor of Beethoven. A pupil of Liszt, he conducted many German orchestras, including the Berlin Philharmonic, and was musical director of Vienna Opera from 1935-42.

Weismann, August (1834-1914), a distinguished German biologist who was Prof. of Zoology at Freiburg, 1866-1912. His great work was done in the field of evolution, especially on the question of individual variability. He is particularly remembered for his theory that heredity is a question of the continuity of the germ-plasm and that acquired characteristics cannot be transmitted to descendants.

Weizmann, Chaim, D.Sc., LL.D., Ph.D. (1874-1952), Zionist leader, became provisional President of Israel in May 1948, and was elected first President in 1949. He was a distinguished organic and biochemist.

Wellesley, Marquess, K.G., P.C., K.P. (1760-1842), elder brother of the great Duke of Wellington, and himself a statesman of note.

Wellington, Arthur Wellesley, 1st Duke of, K.G., P.C., G.C.B. (1769-1852), was the most famous British general of the 19th century. He distinguished himself in India and conducted successfully the Peninsular War. In 1814 he was British Ambassador at Paris. Then came Napoleon's escape from Elba, the short and sharp campaign which terminated at Waterloo, and the final overthrow of Napoleon. Wellington became the most prominent man in the Empire. From 1828 to 1830 he was Prime Minister. From 1842 to his death he was Commander-in-Chief. His funeral at St. Paul's was one of the great pageants of last century.

Wells, Herbert George, D.Sc. London (1866-1946), distinguished English novelist whose work, whether romantic as in *Kipps* and *The History of Mr. Polly*, or scientific as in *The Outline of History*, gained him a world-wide reputation. Social, political and educational problems are treated with breadth of vision and are clearly analysed in his books. Among his later books are *A Short History of Mankind*, *Work, Wealth and Happiness of Mankind*, *The Shape of Things to Come*, *The Fate of Homo Sapiens*.

Wesley, Charles (1708-88), brother of John Wesley, and the poet of Methodism. Wrote a large number of hymns of enduring merit.

Wesley, John (1703-91), the founder of the great religious communion of the people called "Methodists," and the son of a clergyman of the Anglican church. Taking orders himself, in

- 1735, he went to Georgia as a missionary and allied himself with the Moravians, but later he abandoned all ecclesiastical traditions, and established, on a wonderfully well-devised basis, the connexion called by his name. His own open-air preaching was powerful in the extreme, his energy and depth of purpose inspiring, and his organising ability exceptional. He accomplished a great work of religious revivification, taking the world as his parish; and profound as was his conviction of his high calling as an Evangelist, John Wesley "built better than he knew" in rearing the denominational edifice which is the monument of his faith and strenuousness.
- West, Benjamin, P.R.A. (1738-1820)**, was born in America, but settled in England in 1763. He was a painter of religious and historical pictures, such as *Christ Healing the Sick*, *Penn's Treaty with the Indians*, *The Black Prince at Poitiers*, and *The Death of General Wolfe*.
- West, Rebecca, C.B.E. (Mrs. Cicely I. Andrews) (b. 1892)**, writer and critic. Her critical works include *Henry James*, 1916; *The Strange Necessity*, 1928; and *Particular Graces*, 1933. Among her novels are *The Return of the Soldier*, 1918, *The Judge*, 1922, and *Harriet Hume*, 1924; *Black Lamb and Grey Falcon*, 1942, is a travel book and commentary on Yugoslavia.
- Westermarck, Edward Alexander, Ph.D. (1862-1939)**, a distinguished Finnish scientist who was Professor of Sociology at the University of London, 1907-30. Born at Helsingfors, he made an international reputation with his monumental *History of Human Marriage*, written in English and published in 1891. His *Origin and Development of the Moral Ideas*, 1906-8, was followed by many other works, including *A Short History of Marriage*, 1926; *Ethical Relativity*, 1932; and *The Oedipus Complex* and other essays on sex.
- Westinghouse, George (1846-1914)**, American engineer who built the dynamos for Niagara Falls, and in 1865 invented the compressed air brake known by his name and developed a compressed air system of railway signalling.
- Westmacott, Sir Richard, R.A. (1775-1856)**, a great English sculptor who studied under Canova at Rome, and succeeded Flaxman as Professor at the Royal Academy. He executed many fine monuments in Westminster Abbey, at St. Paul's Cathedral, and elsewhere, including the statue of Achilles in Hyde Park and the pediment of the British Museum.
- Wharton, Edith (Jones) (1862-1937)**, American novelist whose *House of Mirth* (1905) brought her fame as a social satirist. Her work was greatly influenced by her friend Henry James, and most of her fifty-four volumes were written after she was thirty-five.
- Whately, Archbishop Richard (1787-1863)**, was for over thirty years Archbishop of Dublin, and achieved a high reputation as a writer on theology and philosophy. His treatises on *Rhetoric and Logic* are among the most notable books of their class.
- Wheatstone, Sir Charles, F.R.S. (1802-75)**, was an eminent English electrician and scientist, whose experiments in association with Mr. W. F. Cooke resulted in the first application in this country of the principle of the electric telegraph. The stereoscope was also one of his inventions. He was Professor of Natural Philosophy to King's College, London, for many years.
- Whistler, James Abbott McNeill (1834-1903)**, was an original artist, writer, and wit, who first came to Europe from America in 1857, and made a name as an etcher both in Paris and in London. His studies of Thames scenery are especially fine. When he began to exhibit pictures in oils he greatly puzzled the critics, some of whom discovered in his "nocturnes" and other studies an impressionist of surpassing genius, while others, including Mr. Ruskin, who described one of the "nocturnes" at the Grosvenor Gallery as a "pot of paint flung in the public face," looked upon them as mere audacious eccentricities. The finest of his oil paintings are his portrait of his mother, and that of Carlyle. He brought an action against Ruskin for the criticism referred to, but only obtained a verdict of one farthing damages without costs. His *Genius Art of Making*
- Enemies* is a brochure that will long be remembered.
- White, Field-Marshal Sir George Stuart, V.C., G.C.B., O.M., G.C.M.G., G.C.I.E., G.C.V.O. (1835-1912)**, the heroic defender of Ladysmith in the South African War and a soldier who achieved renown at many points of a long military career.
- Whitefield, George (1714-70)**, was for a time associated with John Wesley at Oxford in the propagation of Methodism and attracted great attention by his gifts as a preacher. He was Wesley's most powerful champion; but in 1741, differing from Wesley on a point of doctrine he left the Methodists, and thenceforward simply preached as an evangelist, allying himself with no sect, but expounding Calvinistic doctrines with fervour and eloquence. The Countess of Huntingdon built and endowed numerous chapels for him in various parts of the country. He died in America on his seventh tour.
- Whitgift, John (1530-1604)**, a gifted Anglican prelate. Persecuted the Puritans, and was one of the authors of the famous *Lambeth Articles*. Was Archbishop of Canterbury 1583-1604.
- Whitman, Walt (1819-92)** was an original figure in the world of American authorship, and produced many works of striking poetic merit. He served in the Civil War, and his vigorous humanity, as expressed in his writings, made him a distinguished personality. His works include *Leaves of Grass*, *Drum Taps*, and *Democratic Views*.
- Whittier, John Greenleaf (1807-92)**, America's Quaker poet, was the son of a New England farmer, and for a time followed the trade of a shoemaker. After some experience in journalism, he published his first book of poems, *Legends of New England* (1831). His best-known volumes are: *Lays of My Home* (1843), *Voices of Freedom* (1846), *Songs of Labour* (1850), and *National Lyrics* (1865).
- Whittington, Richard (circa 1358-1423)**. The son of a Gloucestershire knight who was outlawed. Richard went up to be apprenticed in London and there found fortune and fame eventually as a merchant. Four times Mayor of London and representative of the City in Parliament he was a great man in his time, engaging in many profitable and honourable enterprises. Richard was well styled "the model merchant of the Middle Ages," and he did marry his master's daughter, and no doubt drew some sort of inspiration from the bells of Bow.
- Whittle, Air Commodore Sir Frank, K.B.E., C.B. (b. 1907)**, pioneer in the field of jet propulsion. The first flights of Gloster jet-propelled aeroplanes with Whittle engine took place in May 1941.
- Whymer, Edward, F.R.S.E. (1840-1911)**, a wood-engraver and artist; also one of the best-known Alpine climbers, and the first to reach the summit of the Matterhorn. Author of books on mountaineering in various countries.
- Wiggin, Kate Douglas (Mrs. George C. Riggs) (1856-1923)**, an American novelist of quaint charm and humour. Author of *Rebecca of Sunnybrook Farm*.
- Wilberforce, William (1759-1833)**, was the son of a Hull merchant. He was educated at Cambridge, and entered Parliament in 1780. In 1789 made the first of his many proposals in the House of Commons for the abolition of the slave trade, but it was not until 1807 that the Act embodying these proposals was carried.
- Wilcox, Mrs. Ella Wheeler**, a popular American poetess (1855-1919). Writer of sentimental verse.
- Wilde, Oscar Fingall O'Flahertie Wills (1866-1900)**, Irish author and dramatist. The son of Sir William Wilde, a well-known Dublin surgeon, was the leader of the cult of æstheticism, of art for art's sake. His works included poems, fairy-tales and short stories. He is best known, however, for his brilliantly witty comedies, *Lady Windermere's Fan*, *A Woman of No Importance*, *The Ideal Husband* and *The Importance of Being Earnest*.
- Wilder, Thornton Niven (b. 1897)**, American author and playwright. Among his books are *The Bridge of San Luis Rey* and *The Ides of March*.
- Wilkes, John (1727-97)**, was a forcible, daring, and original Whig politician, who championed the cause of the people with great vigour, and

was for a time exceedingly popular. For a violent attack on the Government in his paper *The North Briton*, he was committed to the Tower, but obtained release on the ground that he was a member of Parliament. He was later expelled from the House and fled to France, returning in 1763, and elected M.P. for Middlesex. A fresh prosecution, however, and a fresh expulsion took place, and three times he was expelled and as often re-elected. A great agitation ensued, and so high was he in favour among the people, that he was made alderman, then sheriff, then Lord Mayor of London. In the end his opponents gave way, the orders against him were withdrawn, and from 1779 he was Chamberlain of the City of London.

**Wilkie, Sir David, R.A. (1785-1841)**, was an eminent painter of popular subjects, mostly of rural life.

**Willcocks, Sir William, K.C.M.G. (1852-1932)**, a British engineer, born in India, who in 1893 planned the great Assuan Dam, which he completed in 1902. In 1911 he undertook for Turkey a vast scheme for irrigating some 31 million acres in Mesopotamia.

**Willet, William (1856-1915)**, an English builder, noted for his long and tireless advocacy of the Daylight Saving scheme, which, however, he did not live to see put into effect. It was adopted as a war-time measure in the year following his death. (See Summer Time, Gen. Inf.)

**William I. (1027-87)**, the "Conqueror," Duke of Normandy, claimed the English throne as legally appointed successor to Edward the Confessor and, at the Battle of Hastings in 1066, defeated Harold II, who was killed. The new king crushed Saxon resistance in the North and West, transferred most of the land to his Norman followers, and drew England into closer relations with the Continent. Maintaining many old institutions such as the shire-court and the fyrd (a non-feudal army), William governed firmly, and was supported by the Church, especially by Lanfranc, Abp. of Canterbury. In 1085 he ordered the Domesday Survey (q.v.).

**William I. of Prussia (1797-1888)**, the maker of modern Germany, succeeded to the throne of Prussia in 1861. It fell to him to have the control of his country during a period of mighty transition and development, with Bismarck as his chief minister. The war with Austria rendered him highly popular, and when in 1870 the war with France was entered upon the whole German people rallied round him, and after a series of brilliant achievements by his army he was proclaimed German Emperor on the 18th of January, 1871.

**William II. (1056-1100)**, the Conqueror's son, surnamed "Rufus," King of England from 1067 to his death. Was in constant conflict with his barons, lived a life of wanton pleasure, was oppressive to his subjects, and was shot (by accident or design) while hunting in the New Forest.

**William II., the Kaiser (1859-1941)**, King of Prussia and German Emperor 1888 until he abdicated Nov. 9, 1918, and fled to Holland, where he was subsequently interned in the castle of Doorn, living there in complete retirement until his death in June, 1941. Educated at Cassel and Bonn, afterwards entered the army and took a keen interest in military affairs. Succeeded his father, the Emperor Frederick, in 1888. His reign was marked by a strong militarism and an intense ambition to secure the dominance of Germany in the Councils of Europe—an ambition which by unscrupulous action and utter disregard of treaty obligations brought about the war of 1914-18. To him was due the introduction of a system of war savagery which greatly increased the horrors of warfare and must leave an indelible stain upon his name. Visited England in 1907, was present at King Edward VII.'s funeral in 1910, and in 1911 at the unveiling of the memorial to Queen Victoria.

**William III. of England (1650-1702)** while Stadtholder of Holland, married Mary, eldest daughter of the Duke of York (afterwards James II.). As captain-general of the Dutch forces he was successful against the French, and in 1688, when James had abdicated and fled the country, William was invited to succeed him and he and Mary afterwards became

joint King and Queen. Later he was at war with France, and suffered defeats, but ultimately effected an honourable peace by the Treaty of Ryswick in 1697.

**William IV of England (1765-1837)** was the third son of George III., and ascended the throne in 1830 in succession to his brother, George IV. He had seen some sea service, and was flatteringly styled the "Sailor King." He showed little of kingly capacity, he was genial and pleasure-loving, and placed no obstacles in the way of government, so was, after a sort, popular. In the early part of his reign (1832) the first great Reform Bill was passed.

**William the Silent (1533-84)**, Prince of Orange, made many attempts to secure a peaceful settlement of Netherlands' disputes with Philip II, but became the leader of the ensuing Revolt and was assassinated. He established the independence and Protestant character of the Northern Netherlands, where literary, artistic, colonising, and commercial activity flourished in the following century.

**Williams, Sir George (1821-1905)**, the founder of The Young Men's Christian Association.

**Williams, (George) Emyln (b. 1905)**, Welsh actor-playwright, and producer, who has had great success in numerous plays and films, and latterly in his readings from Dickens and Dylan Thomas. Author of *Night Must Fall*, *The Corn is Green*, and *The Light of Heart*.

**Willington, 1st Marquess of, P.C., G.C.S.I., G.C.M.G., G.C.I.E., G.B.E. (1866-1941)**, Governor-General of Canada, 1926-31. Viceroy and Governor-General of India, 1931-36.

**Wilson, Henry Maitland, Field-Marshal Lord, G.C.B., G.B.E., D.S.O. (b. 1881)**, held a variety of commands in the Middle East, 1939-44, when he became Supreme Allied Commander for the Mediterranean area. Led British Joint Staff Mission in Washington, 1944-47.

**Wilson, Richard, R.A. (1714-82)**, a landscape and portrait painter. Was the pioneer of modern landscape painting.

**Wilson, (Thomas) Woodrow (1856-1924)**, President of the United States 1913-21. Was Governor of New Jersey, 1912-13. In 1916 secured from the Kaiser a promise to abandon the more inhuman forms of submarine warfare, and, on their resumption in 1917, broke off official relations with Germany and proclaimed a state of war. Entered into the conflict with the utmost vigour, bringing the full military and financial resources of the Republic into play against Germany. Was a great factor in the winning of victory and in the concluding of a just peace. Largely responsible for the setting up of the League of Nations, which was foreshadowed in his famous Fourteen Points.

**Wingate, Major-Gen. Orde Charles, D.S.O. (1903-44)**, was the renowned and daring leader of the Chindit forces engaged behind the Japanese lines in Burma during the second world war. Killed in an air crash.

**Winifred, St.**, the 7th-century patron saint of virgins, a Welsh maiden, who, importuned by Prince Caradoc, treated him with scorn, and he had her beheaded.

**Winnington-Ingram, Rt. Rev. and Rt. Hon. Arthur Foley, P.C., K.C.V.O., D.D., LL.D. (1858-1946)**, Bishop of London, 1901-39. Published works include *Work in Great Cities* and *Christ and his Friends*.

**Wiseman, Nicholas Patrick Stephen, Cardinal (1802-65)**, who became in 1850, on the restoration of the Roman Catholic Hierarchy in England, the first R.C. Archbishop of Westminster, and created Cardinal. The remainder of his life was spent in the reorganisation and development of the Roman Catholic Church in Great Britain. He was one of the three great R.C. prelates of the nineteenth century, the other two being Manning and Newman.

**Woffington, Peg (1720-60)**, an Irish bricklayer's daughter, who became a celebrated actress, and was great at the impersonation of male characters and a fine singer. She also shone in the role of Society-lady and in high-comedy parts, and was much sought after in private life by people of rank and talent. For a while she lived with Macklin and Garrick in Bow-street, and atoned a good deal for her lack of moral restraint by her abounding charity.

- In 1757 she was stricken with paralysis whilst playing *Rosalind*.
- Wolf, Friedrich August** (1759-1824), a great German scholar, regarded by some as the founder of scientific classical philology.
- Wolfe, Humbert, C.B., C.B.E.,** (1885-1940). English poet and critic. Entered the Civil Service in 1908 and became Dep. Sec. of the Min. of Labour. His poems include *London Sonnets*, *Kensington Gardens*, *Unknown Goddess*, *Requiem*.
- Wolfe, General James** (1727-59), commanded the British forces in Canada at the siege of Quebec, where he won a brilliant victory, which cost him his own life.
- Wolsey, Field Marshal Garnet Joseph, 1st Viscount** (1833-1913), led the expedition to the relief of Gordon in 1884, and was C.-in.-C. 1895-1900. Published *A Life of Marlborough and The Decline and Fall of Napoleon*.
- Wolsey, Cardinal Thomas** (1471-1530), was the son of an Ipswich butcher. Showing ability, he was sent to Oxford to be educated, later on entering the Church, where he gradually rose to a position of eminence, and was entrusted with several diplomatic missions. He was especially favoured by the King, Henry VIII., and secured rapid preferment under that monarch, being in turn Bishop of Lincoln, and Archbishop of York. He was subsequently made Cardinal and became Henry's Chancellor. For a number of years he was supreme, and by his diplomacy did much to strengthen the kingly power. But when Wolsey was unable, though willing enough, to obtain the papal sanction for Henry's divorce of Catherine, he fell into disfavour, and his decline was rapid indeed. From being a great personage, with a princely entourage, he was humbled, persecuted, and harried, and died at Leicester Abbey a broken, dejected man.
- Wood, Sir Henry Joseph, C.H.** (1869-1944), was the most popular English musical conductor of his day. He introduced many works and composers previously unknown to the British public and greatly stimulated and encouraged interest in classical music. His long association with the Promenade Concerts began in 1895 at the Queen's Hall, and after it was destroyed in an air raid in 1941 the concerts continued at the Albert Hall and are now named after him. He composed songs and cantatas, and his arrangement of sea shanties ends every series of Promenade Concerts.
- Woodville, Elizabeth** (1437-91), wife of Sir John Grey. After her first husband's death she made a secret marriage with Edward IV., and became the mother of Edward V. and his brother Prince, both of whom were put to death in the Tower by order of Richard III. She was also mother to Elizabeth, Queen of Henry VII.
- Woolf, Mrs. (Adeline) Virginia** (1882-1941), English novelist and essayist, daughter of Sir Leslie Stephen and wife of Leonard Woolf, writer and publisher. Together they formed the Hogarth Press. Among her best known works are *To the Lighthouse*, *Mrs. Dalloway*, *The Wave*, *The Years*, *A Room of One's Own*, *Orlando*.
- Woolley, Richard van der Riet, Sc.D., F.R.S.** (b. 1906), succeeded Sir Harold Spencer Jones as Astronomer Royal at the Royal Greenwich Observatory in 1956; formerly Commonwealth Astronomer and Director of the Commonwealth Observatory at Canberra.
- Woolton, Frederick James Marquis, Viscount, P.C., C.H., M.A.** (b. 1883). Chairman of the Conservative Party, 1946-55.
- Wootton, Barbara Frances, M.A., J.P.** (b. 1897). Prof. of Social Studies, Univ. of London, 1948-52; a Governor of the B.B.C. since 1950.
- Wordsworth, William** (1770-1850), the chief of the "Lake Poets," and one of the most inspired of all British bards, was a native of Cockermouth, and was educated at Hawkshead and St. John's College, Cambridge. In association with Coleridge he issued a volume of *Lyrical Ballads* in 1793. The following year saw him settled at Grasmere, and there and at Rydal Mount he passed the rest of his days. In 1802 he married Mary Hutchinson, his cousin, and the two, with the poet's sister Dorothy, formed an ideally poetic household. Here he carried out his creed of "plain living and high thinking," and produced at intervals some of the purest and noblest poetry in the language. As an interpreter of Nature in her many moods he stands unrivalled. Succeeded to the Poet Laureateship on the death of Southey in 1843.
- Wotton, William** (1666-1727), a scholar of marvellous precocity, who was entered at Cambridge University in his twelfth year took his B.A. a year later, then knowing twelve languages, and was Fellow of St. John's at nineteen. Wootton became a clergyman of some distinction, and is best remembered as an author by his *Reflections upon Ancient and Modern Literature*.
- Wren, Sir Christopher, F.R.S.** (1632-1723), the most famous English architect of his time. He did not quite have all his own way with the tremendous thirty-five years' task he accepted in undertaking the reconstruction of St. Paul's after the Fire, but he produced a masterpiece of which Britain may well be proud. Chelsea and Greenwich Hospitals, and a number of London's finest churches were also his work.
- Wright, Sir Almroth (Edward), K.C.B., C.B., M.D., F.R.S.** (1861-1947), discovered the system of anti-typhoid inoculation, the method of therapeutic inoculation for bacterial infections (vaccinotherapy), and methods of measuring the protective substances in human blood.
- Wright, Orville** (1871-1948), American airman who, with his brother Wilbur (1867-1912), began gliding experiments on the sand dunes at Kitty Hawk, North Carolina. To the glider they built they added a petrol engine, and on 17th Dec., 1903, they made four flights, the longest being 852 ft. These flights were the first in which a man had been carried from the ground on flight by a power-driven aeroplane.
- Wyatt, James, R.A.** (1746-1813), a celebrated architect in his day. He built Fonthill Abbey for Beckford and the Royal Military Academy at Woolwich. Pres. of R.A. 1805-6.
- Wyatt, Sir Thomas** (1503-42), was the first writer of English sonnets, and a poet who did much to develop the earlier forms of verse. He was also a distinguished diplomatist.
- Wyatt, Sir Thomas ("The Younger")** (c. 1520-54); joined with the Duke of Suffolk in favour of Lady Jane Grey and against Queen Mary. Son of the last-mentioned. Led the men of Kent in rebellion on London in 1554, but was captured and executed.
- Wycherley, William** (1640-1715), the Restoration dramatist, was for many years in high favour at Court. His genius for comedy writing was remarkable and readily adapted itself to the Restoration atmosphere; thus while he provided wit and intrigue and plot and characterisation in plenty and of great merit, the taint of the time was over it all. His plays include *The Country Wife*, *Love in a Wood*, and *The Plain Dealer*. He lived recklessly, was generally in pecuniary difficulties, and marrying the Dowager Countess of Drogheda late in life, placed himself in bondage to a highly jealous woman.
- Wyclif, John** (c. 1324-84), born in Yorkshire, educated at Oxford, and one of the most eminent ecclesiastics of his time. He adopted principles many of which became general at the Reformation, and brought down upon himself the bitter enmity of the Roman Catholic leaders, and would probably have been put to death but for the protection of John of Gaunt. While in comparative retirement as Rector of Lutterworth, in Leicestershire, he finished his translation of the Bible.
- Wykeham, William** of (1324-1404), was Bishop of Winchester from 1366 to his death, and from 1367 to 1371 Lord Chancellor. He was a man of great learning and an excellent preacher, and wielded great influence. He founded New College, Oxford, in 1379 and Winchester College in 1387.
- Wyllie, William Lionel, R.A.** (1851-1931), an English marine painter who excelled in the draughtsmanship of seafaring craft of all kinds, and also won a high reputation as a water-colourist and etcher. His picture, *The Thames Below London Bridge*, was bought by the Chantrey Bequest. Among his other well-known works are *The Battle of Trafalgar*, and *The Port of London*.
- Wyspianski, Stanislaw** (1869-1907), great Polish poet, dramatist and painter.

## X

**Xavier, St. Francis** (1506-1552), the apostle of the Indies, was the follower of Ignatius de Loyola, and devoted his life to missionary work in the East. He was canonised in 1622.

**Xenophon** (444-359 B.C.), the Athenian general and follower of Socrates. His chief works are *Anabasis Hellenica*, and *Cyropaedia*.

**Xerxes** (circa 519-465 B.C.), King of Persia, was the son of the first Darius and a great commander. In 481 B.C. he started on his famous expedition against Greece when, according to Herodotus, he had a combined army and navy of over two and a half million men. He defeated the Spartans at Thermopylae, but his fleet was overcome at Salamis. He reigned from 485 to 465 B.C. and met his death by assassination.

**Ximenes de Cisneros, Francisco** (1436-1517), Spanish statesman and Cardinal who reformed the Franciscan Order to a great extent, and in 1502 began to direct the preparation of a polyglot bible, the *Complutensian*, which greatly influenced subsequent versions. In 1506 was made Regent for Queen Juana, and raised to the cardinalate in 1507. Personally conducted a military campaign in Africa in 1509, and afterwards became Inquisitor-General, and in 1516, Regent of Castile, but in the following year was dismissed by the Emperor Charles V.

## Y

**Yeats, William Butler** (1865-1939), Irish lyric poet and dramatist and major figure in the Irish literary revival of the 20th century. With Lady Gregory and others founded the Abbey Theatre in Dublin, for which he wrote many plays. Interested in mysticism and the occult. Member of the Irish Senate, 1922-28; awarded Nobel Prize in Literature in 1923. Some of his best work was written in his later years in *The Tower* (1928) and *Last Poems* (1940). Plays include *Cathleen Ni Houlihan* (1902), *The Hour Glass* (1904), *Deirdre* (1907).

**Yonge, Charlotte Mary** (1823-1901), author of over 120 novels, school books, and other works, including *The Heir of Redclyffe*, *The Daisy Chain*, *The Dove in the Eagle's Nest*, and *The History of Christian Names*.

**Young, Brigham** (1801-77), Mormon leader, and head of the Latter Day Saints of Salt Lake City. At his death he had seventeen wives.

**Young, Francis Brett** (1884-1954), British novelist. His books include *My Brother Jonathan* and *Doctor Bradley Remembers*.

**Young, James, F.R.S.** (1811-88), a Glasgow chemist who discovered the method of distilling oil from shale, and founded the mineral oil industry of Scotland, which led to the development of petroleum concerns.

**Young, Thomas** (1773-1829), one of the most versatile geniuses in history, descended from a Quaker family of Somerset. Studied languages, medicine, and held the Professorship of Physics at the Royal Institution. In 1804 elected Foreign Secretary of the Royal Society. He was very successful in deciphering Egyptian hieroglyphics and was the first to translate the inscription on the Rosetta Stone. Famous for his share in establishing the undulatory theory of light and for his work on physiological optics.

**Youngusband, Lt.-Col. Sir Francis Edward, K.C.S.I., K.C.I.E.** (1863-1942), soldier, explorer and writer. Wrote many works on the East. Headed the British Mission to Tibet, 1903-04. Was *Times* correspondent with the Chitral expedition. Pres. of Royal Geographical Soc., 1919-22.

**Ypres, 1st Earl of, P.C., K.P., G.C.B., O.M., G.C.V.O., K.C.M.G.** (1852-1925), entered Navy in 1866, afterwards passing into Army in 1874, making his mark as a Cavalry officer in the Egyptian campaign of 1884; served in South African War with brilliant success. C-in-C. British Forces in France, 1914-15; C-in-C. Home Forces, 1915-18; Lord Lieut. of Ireland, 1918-21.

**Ysaye, Eugene** (1858-1929), Belgian violinist and conductor, noted chiefly for his playing of the works of Bach and César Frank.

**Yukawa, Hideki** (b. 1907), Japanese physicist, who received the 1949 Nobel Prize for predicting the

existence of the meson. Prof. of Physics at Kyoto Univ. since 1939.

## Z

**Zadkiel** (the angel of Jupiter in Jewish rabbinical lore) was the name assumed by Lilly (1602-81) the astrologer, and also by Richard James Morrison (1794-1874), Hebrew scholar and amateur astronomer, in the almanack known as *Zadkiel's Almanack* and first issued in 1831.

**Zaharoff, Sir Basil, G.C.B., G.B.E.** (1849-1936), was an influential Greek banker and financier who became an armaments magnate, supplying the Allies in the first world war.

**Zamenhof, Ludwig Lazarus** (1859-1917), Polish linguist who was by profession an oculist, but gained fame as the inventor of Esperanto.

**Zangwill, Israel** (1864-1926), President of the International Jewish Territorial Organisation. Made a hit with *The Premier and the Painter* in 1888; afterwards edited a comic weekly called *Ariel*; then began novel writing.

**Zapotocky, Antonin** (b. 1884), Pres. of Czechoslovakia since 1953; Prime Min., 1948-53; formerly trade union official.

**Zaro, Aga** (c. 1776-1934), a Turkish centenarian claiming to have been born in 1776, he asserted that he could remember the American War of Independence, that he had seen Napoleon when fighting with the Turkish Army in Syria, and that later he had fought in Greece during the war for Greek independence. Zaro first came into prominence in 1930, when he was exhibited in the United States, and in the following year toured England with a circus. From examination under X-rays when he first went into hospital, doctors declared his age to be not more than 120.

**Zeno of Citium** (c. 340-264 B.C.) was a Greek philosopher who founded the Stoic system.

**Zeppelin, Ferdinand, Count von** (1838-1917), inventor of the huge dirigible airship bearing his name. His first ascent was in 1900. He organised a Zeppelin service for the German army in the war of 1914-18, but their extreme vulnerability militated severely against their usefulness.

**Zeromski, Stefan** (1864-1925), great Polish novelist, poet and playwright.

**Zhukov, Marshal of the Soviet Union Grigory Konstantinovich** (b. 1895), led the defence of Moscow and Leningrad during second world war; served on Allied Control Commission in Germany; C-in-C. Land Forces and Deputy Minister of Armed Forces of Soviet Union, 1946-55; succeeded Marshal Bulganin as Defence Minister in 1955.

**Zhukovsky, Vasily Andreyevich** (1783-1852), Russian poet whose original work had very important influence on Russian literature.

**Zinoviev, Grigoriy Evseyevich** (1883-1936), Russian Communist leader, known in England in connection with the notorious "Zinoviev letter", later proved a forgery, which brought about the defeat of the Labour Party in the 1924 general election. Executed in 1936.

**Zola, Emile Edouard Charles Antoine** (1840-1902), was the son of an Italian engineer, and came before the public as a novelist in 1867 with *Thérèse Raquin*. He then conceived the idea of a series of novels which should depict the history of a Second Empire family in various realistic phases, and began the series with *La Fortune des Rougons*, in 1871. In 1877 he made a higher success by *L'Assommoir*. From that time every novel he published had an immense sale.

**Zorn, Anders Leonhard** (1860-1920), was a noted Swedish painter, etcher and sculptor.

**Zoroaster**, the Greek form of the name of the Persian prophet, Zarathustra, who lived about the seventh century B.C. He was a monotheist, believing in a good and holy God whom he called Ahura Mazda. Many of his teachings were absorbed by the ancient Persian religion which survives today among the Parsees in India.

**Zuccarelli, Francesco** (1702-88), a very celebrated Italian artist, who came to England, succeeded, made a handsome fortune, and was one of the first members of the Royal Academy.

**Zwingli, Ulrich** (1484-1531), was one of the ablest of the Swiss Reformation leaders.

**Zwirner, Ernst Friedrich** (1802-61), an eminent Silesian architect. Restored Cologne Cathedral.

# A Citizen's Guide

## A GUIDE TO LOCAL GOVERNMENT.

**What is Local Government?**—Local Government is concerned with the domestic duties of a community as distinct from national questions like defence or taxes which must be decided by Central Government. Beyond Central Government innumerable tasks remain for the elected Local Authorities—the maintenance of order, sanitation and similar services, the provision of education, highways, etc. They are responsible for matters which affect the citizen at every turn. Schools, roads, the safety of towns, disposal of sewage, the fight against infectious diseases, libraries, parks, museums, maternity centres, child-welfare clinics, cemeteries, swimming-pools, safety at the cinema and the theatre—all these, which we so often take for granted, are the concern of local bodies. A full list of all the services performed by Local Government would be impossible. Its range would seem fantastic—from Town and Country Planning to the inspection of meat in the butcher's. Local Government consists largely in providing essential services, but in matters affecting the public welfare it also controls certain activities of citizens. It is a striking feature of Local Government in Great Britain (as compared with some other countries) that responsibility for Local Government is shared by a council and not borne by a single individual. This corporate responsibility is an early principle in our history and is at the root of many of our democratic institutions—not only Local Government bodies but institutions like the jury system and Parliament itself.

**What Can the Citizen Do?**—Good Local Government depends upon intelligent, and interested citizens. Public opinion is a distinguishing feature of a democracy, as distinct from an autocratic form of government, which controls public opinion instead of the other way round. It is open to you to attend Council meetings. If you feel you cannot conscientiously support any of the candidates you should consider becoming one yourself when an election comes round. You may have something to contribute to the welfare of the community in which you live. Many men who have become national political figures received long training first in Local Government.

**What Local Government is there in a Village?**—Three bodies share the Local Government in a village:—

(1) A Parish Council of between five and fifteen members is elected in all rural parishes where the population is over 300. A Parish Meeting is an assembly of all the Local Government electors of the parish, and it meets every March. Where there are more than 200 electors they may set up a Parish Council; if there are more than 300, they must do so. Where there is no Parish Council the Parish Meeting assembles twice a year.

(2) Second, there is the *Rural District Council* taking in its area a group of adjacent parishes and consisting of a Chairman and Councillors.

(3) Third, there is the *County Council*, consisting of a Chairman, County Aldermen, and County Councillors. The Parish Council deals with the purely local matters we have described. The Rural District Council takes the medium-sized problems like housing and housing conditions and sanitary services. The County Council takes the major services, like education, police, roads.

**Value of the General Parish Meeting.**—In the great majority of rural parishes little or no use has been made of the General Parish Meeting. But the meeting offers the electors of the parish an opportunity to review all those various matters which closely affect their general welfare. For example, on Housing it may make recommendations to the Rural District Council on accommodation needed and on possible housing sites; on water supplies and sewage it may make recommendations to the District and County Council

on conservation of resources, prevention of pollution, and extension of water supplies and sewerage; on Transport, recommendations on local needs to the British Transport Commission; and on Electricity, Education, Postal Services, Roads and Footpaths, suggestions and comments similarly to the appropriate bodies.

**Importance of the Parish Council.**—Of all forms of government the Parish Council is in closest touch with the area which it represents, and it can become the Parliament of the village. The legal powers of the Council may be limited, but because it knows its own village it has a duty to convey its knowledge to the District Council, and, if necessary, to the County Council. It is important for Parish Councils to realise the full extent of their many powers and responsibilities and to ensure that they are used to the fullest extent for the benefit of the village. The Parish Council has power and duties in regard to Allotments, Footpaths, Street Lighting, Burial Grounds, Sanitation, Bathing Facilities, Seats and Shelters. The Parish Council can help forward the spread of further education (under an Act of 1944) by initiating the formation of informal groups for adult education in villages. There is a growing general desire to understand the problems of modern life, and the Parish Council, by setting up a Further Education Advisory Committee, can do much to assist the parish to secure the best available facilities for classes, discussions, and lectures. Among other public services which can be rendered by any determined Parish Council are those relating to Old People's Welfare, National Savings, Village Produce, Rural Trades and Crafts, and Advice to Citizens. For adequate guidance on this subject enquiry should be made to the National Association of Parish Councils, 26 Bedford Square, London, W.C.1.

**The Local Government in a Small Town.**—Here Local Government is shared by two authorities, the Urban District Council and the County Council, the major services going to the County authority.

**The Local Government in a Medium-sized Town.**—Here, too, we find only two authorities, the Borough Council and the County Council. The Borough Council is very similar to the Urban District Council mentioned in the preceding paragraph, but the chairman of the Borough Council is a Mayor. Not all areas looked after by an Urban District Council are small. There are five with a population of over 100,000. On the other hand, not all areas with a Borough Council are medium sized, many of them having less than 5,000. A town becomes a borough by obtaining a Royal Charter, and the borough becomes a corporate body with a Mayor, Alderman, and Burgesses (or Citizens).

**The Local Government in a Large-sized Town.**—In the largest towns there is only one body. The County Council plays no part, and the Local Authority is the County Borough Council. Thus Leicester is a County Borough independent of the Leicestershire County Council. New County Boroughs are created by Parliament and the requisite minimum population is 100,000; but certain towns have retained their status because of their historic standing, examples being Oxford and Canterbury. There are eighty-three County Borough Councils in England and Wales. A County Borough may also be a City (which is a title of honour conferred upon a town by the Crown), but it may not be. It may have a Lord Mayor, but not necessarily.

**The Administrative County.**—In England and Wales sixty-two administrative counties, covered by County Councils, have been created. The number exceeds the number of geographical counties because the division for Local Government purposes has been made on grounds of convenience. For example, Sussex is split into

the two Administrative Counties of East Sussex and West Sussex.

**How Does London Run its Government?**—Owing partly to its size and density of population London has its own special form of government. There are no County Borough Councils within the Administrative County of London, and responsibility is divided among the London County Council, the City Corporation, and the Metropolitan Boroughs. The county is divided into twenty-eight metropolitan boroughs, each having a Borough Council. The City of London Corporation is rich in tradition, and it has remained untouched by the general law relating to Local Government. Its functions are small compared to its prestige, and it carries out a good deal of ceremonial entertainment of distinguished visitors. It works through three assemblies. They are first, the Court of Common Hall consisting of the Lord Mayor, Aldermen, Sheriffs, and those liverymen of the City Companies who are freemen of the City. It elects the two City Sheriffs, and nominates two Aldermen for Lord Mayor. Second, there is the Court of Aldermen which appoints the Lord Mayor from the two Aldermen nominated by the Court of Common Hall. Finally, there is the Court of Common Council which includes both Aldermen and 206 Common Council men.

**Local Authorities in Scotland.**—These consist of County Councils, Burgh Councils, and District Councils. The County Councils have powers and duties similar to those in England and Wales. Burgh Councils are of three kinds (Royal, Parliamentary, and Police Burghs). The Royal Burghs (holding rights directly from the Crown) and Parliamentary Burghs (created by the Reform Act, 1832) correspond generally to County Boroughs in England and Wales, but they are not entirely independent of the County Councils. The Police Burghs correspond generally to the Urban Districts and Non-county Boroughs in England. The town councils of Burghs consist of Provost, Bailies, and Councillors, corresponding to the Mayor, Aldermen and Councillors of English Councils. The District Councils broadly correspond to English Rural District Councils. Central control of Scottish Local Authorities is exercised by the Secretary of State for Scotland, the Department of Health for Scotland, the Scottish Education Department, and other Scottish Departments.

**Local Authorities in Northern Ireland.**—These comprise six Administrative Counties (Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone); two County Boroughs (Belfast and Londonderry); three Boroughs; and a number of Urban and Rural Districts.

**Who Run Local Government?**—We have seen that, excluding the area of the London County Council, there are seven different types of local authority:—

- Parish Meeting.
- Parish Council.
- Rural District.
- Urban District.
- Borough.
- County Borough.
- County.

Except for the first they consist of representatives elected by the citizens, who ultimately control them. The whole of the members of a Parish Council retire every third year. But in Rural and Urban District Councils and Borough Councils it is the normal practice for one third of the councillors to retire each year. No election can therefore produce a totally new Council, and some continuity of experience is thus assured.

Besides Councillors there is another group of members called Aldermen in Borough Councils, County Borough Councils, and County Councils. They are elected, not by the public but by the Council itself, forming a fixed percentage of the total membership of the Council. Thus Borough Councils may consist of eighteen Councillors and six Aldermen presided over by a Mayor. The Councillors are elected by the Burgesses, the Aldermen by the Councillors, and the Mayor by the

Councillors and Aldermen together. If a Councillor is made an Alderman he ceases to be a Councillor, and the vacancy is filled by an election. Aldermen hold office for six years, one half of them retiring every third year. An Alderman need not have been a Councillor, but he must be qualified for election as a Councillor. Such a system enables a Council to invite to join them men and women of experience who have not stood for election. Urban and Rural District Councils do not have Aldermen.

**Who May Vote for Local Government?**—A Register of Electors valid for elections between February 16, 1956, and February 15, 1957, contains the list of electors who were resident on the qualifying date October 10, 1955, or were otherwise eligible.

**Who May be Elected?**—Eligibility for nomination as a candidate depends in the first place upon registration as a local government elector for the area and thereafter upon a number of qualifications and disqualifications designed to secure that the candidate is a suitable person.

**How Does Local Government Get its Powers?**—A Local Authority may do only those things which it has been empowered to do by Act of Parliament. There are three kinds of such Acts: General, Adoptive, and Local Acts. A General Act may require a Local Authority to do something, or it may permit it to do something if the authority so wishes. Thus Parliament having decided that the minimum school-leaving age is to be fifteen, Local Authorities must see that that rule is carried out: they cannot choose some other school-leaving age. Sometimes the Act lays a duty on the public and requires the Local Authority to see that it is carried out, examples being the Shop Acts fixing hours of shopkeepers.

An Adoptive Act is one which confers power to do something if the Local Authority wish to adopt the provisions of the Act, an example being the Public Libraries Act.

The third kind of Act, the Local Act, confers special powers upon a particular Local Authority to which the Act refers, e.g., the widening of roads, or the establishment of a municipal theatre. It has sometimes happened that a local enterprise authorised to one authority by a Local Act has been afterwards adopted as a model for a General Act for all authorities.

**Who Does the Work?**—A Local Authority appoints and pays its officials, who have the responsibility of the day-to-day work. A Parish Council may appoint only two officials, a clerk and treasurer (who may be members of the Council). The clerk may be paid (if he is not a member), but the treasurer is not paid.

All local authorities must appoint a clerk. He is called a Town Clerk for a Borough Council, otherwise the Clerk of the Council. Every County Council must appoint a Medical Officer of Health, a Surveyor, and a Treasurer. Borough Councils (County and non-County) and District Councils are required to appoint a Medical Officer of Health, a Surveyor, a sanitary inspector, and a Treasurer.

Many other appointments are often necessary e.g., directors of education, public analysts, shop inspectors, chief constables, registrars of births, marriages and deaths, librarians, health visitors, solicitors, architects.

**Where Does the Money Come from?**—The money comes from the public, and the yearly bill is in the neighbourhood of £500 million. The main sources of money are rates, government grants, trading undertakings, and loans.

Rates are a local tax on the occupation of property. Each separate property is assessed according to its rental value, and the amount paid for rates depends upon the amount of this assessment. It is the occupier on whom liability rests, although he may pay his rates indirectly as part of his rent. Thus, if the half-yearly rate is 2s. 6d. in the £1 (the rate for the year being 5s.) an occupier of property rated at £32 a year will pay in

each half year £4 in rates. On the back of the demand note is a statement showing the services for which the money is required. Government grants are given towards expenditure on services like education, police, housing, and highways.

An authority also obtains income from municipal undertakings. Finally, there is the possibility of obtaining a loan, generally for a long term capital development like new schools or housing estates.

**How Does Central Government Supervise Local Government?**—Local Authorities, in providing services (for example, a Police Force) required by Act of Parliament, are in effect carrying out local administration of a national service. Therefore a Government Department is held responsible for seeing that the Local Authorities carry out their local duties. As regards police, the department is the Home Office; for education, the Ministry of Education; for town and country planning, the Ministry of Housing and Local Government. Excluding these specific services which are the concern of another Government Department, the Ministry of Housing and Local Government has a general concern for Local Government as a whole. That Ministry took over that general concern from the Ministry of Health, and until 1919 the Ministry of Health was known as the Local Government Board.

The tendency is for Central Government to lay down broad principles and advice to the Local Authorities, but it is the latter who know local circumstances. Supervision is strengthened in two ways—by financial control and by inspection. There is need for public-spirited men and women to take part in Local Government, and for all citizens to take interest in local affairs.

**The Trend towards Central Administration.**—It is being increasingly felt that the country as a whole should be responsible for running certain services which have been administered locally, or that it should take a more prominent part or exercise a closer control. Thus hospitals were transferred to the Central Government under the National Health Service Act. Further examples are the removal of responsibility for trunk roads from local highway authorities; the ownership of civil airfields; and diminished responsibility for public assistance. Changes in the field of public utilities—passenger road transport, electricity supply, gas undertaking—have also affected local authorities. But there are dangers in this trend. There is a weakening of smaller units of Local Government by the removal of many old functions either to larger units or to the Central Government itself.

**The Boundary Commission.**—A Boundary Commission was established under an Act of 1945 to make a survey in order to create more effective and convenient units of Local Government. The Commission thought that the weaknesses in Local Government were due to (1) the disparity in size and resources of individual counties, county boroughs, and county districts; (2) the failure of the Local Government system to adapt itself to the changing pattern of industrial England, particularly in regard to what are called the

great conurbations (a term given to the concentrated urban districts like those of Manchester and Merseyside); (3) the haphazard allocation of functions; and (4), the conflict between County Councils and County Borough Councils. The Commission recommended the merger of certain of the smallest county councils and the division of some of the biggest. They also suggested one-tier County Councils for certain urban conurbations or densely populated areas. Furthermore, they suggested that in future not all County Boroughs should be separate from the Administrative County for all purposes; but that in some County Boroughs the County Council and not the County Borough Council would be responsible for services like the main town and country plan, the police force, the fire service, land drainage, remand homes, and other subjects. Thus some County Boroughs would be "most-purpose" authorities (as the Report describes them) instead of being "all purpose" as they are at present. The proposals would thus eliminate the unfit units, as the weaker County Councils and County Boroughs are removed from the rank of the new top-tier authorities. But the problem remained of carrying large regional areas and authorities capable of planning services which require large-scale planning.

**Termination of the Boundary Commission.**—In June 1949 the Commission was wound up by the Government. Up to February 1956 there had been no announcement of the Government's proposals for reform.

**Proposals for Reform.**—Four national associations of local authorities made agreed proposals in March 1953. They assumed the continuance of two-tier government within conurbations and administrative counties (with parish councils forming a third tier in rural districts); and one-tier government elsewhere. But they proposed division and alteration of administrative counties to make them effective and convenient units; the reversion to non-county borough status of county boroughs with less than 75,000 population; and they suggested that the boundaries of the great conurbations should be defined and schemes of government for them approved by Parliament. No hint was given as to the kind of conurbation contemplated or of the form of its government (except that it should be a two-tier system).

**New Towns.**—The building of new towns can be appropriately mentioned here. It was a recommendation of the Reith Committee that local authorities should be permitted to initiate the creation of new towns if they desired to do so. They had in mind particularly the case where a large town, in order to carry out re-development on sound lines, needs to move a part of its population and industry, and this can best be effected by building a new town. But this proposal was not accepted and new towns are being built without participation of local authorities.

**Entertainments and Museums.**—It is not widely known that since 1948 certain local authorities

### Local Government in England and Wales

are empowered to take steps for the provision of a theatre, concert hall, dance hall, and other premises suitable for giving entertainment. Outside London the local authorities so empowered are county boroughs and county districts. Their expenditure for the provision of entertainment, which includes maintaining a band or orchestra, is limited to the product of a sixpenny rate, plus receipts from charge for admission, etc. Much better use needs to be made of this power if the low cultural quality of life in provincial cities is to be raised. Another element in cultural life which needs encouragement is the provision of museums. The value of a museum as a stimulus to general interest and education is only being slowly realised, and a large number of towns are devoid of anything in the nature of a museum. But both urban and rural authorities are free to establish museums and maintain them.

**Wales.**—From December, 1955 all local government functions relating to Wales and Monmouthshire are exercised through the Welsh Office at Cardiff of the Ministry of Housing and Local Government, except where such arrangements present special difficulties. This completed a process which had been going on for some time. Cardiff was designated as the capital of Wales.

### OUTLINE OF CENTRAL GOVERNMENT.

**What is Democracy?**—Democracy is a form of Government in which the supreme powers of Government are vested in the whole body of citizens. It thus differs from an autocracy, in which these powers are vested in one person, from an oligarchy (powers vested in a few people), and from an aristocracy (powers vested in a privileged class). This country, the United States, the Scandinavian countries, and most of the Dominions are among the examples of a democracy. The classification of Governments into monarchy (a form of government with a King or Queen at the head) and republic (which has no King or Queen but a President) cuts across the division of Governments into those which are democratic and those which are not. For example, the United States is a democracy, but not a monarchy. In this Guide we try to explain how democracy works in Great Britain; the essential methods whereby the people control the Government; and the way Government itself works (including Parliament, the Civil Service, Local Government, and the Judiciary).

**Essentials of Democracy.**—The fundamental way in which the mass of citizens control the Government is a combination of methods, namely universal suffrage, the rule of the majority, and the right to oppose the Government. Under the first of these three principles all citizens, male or female, over the age of twenty-one have the right to elect their own member of Parliament and to vote in local elections. Although we may sometimes take universal suffrage for granted, it came only in 1928, and is the culmination of slow growth. Under the second principle the majority has the right to rule, subject to the safeguards we shall describe later and subject especially—and this is the third principle—to the right of the minority to oppose. This consideration is vital to a democracy and opposition is so essentially a part of the British Constitution that the Leader of the Opposition is paid a salary by the Government. The idea of opposition entails the existence of parties, dealt with later.

**What is the British Constitution?**—The statement that our Constitution is an unwritten one means that there is no single document called a Constitution. In this respect this country is unique. Democracy is preserved by the ordinary law, by the political organisation of the people, by custom, and by rights which depend upon the capacity of the people to preserve them.

**Government of the People.**—The supreme law-making body is Parliament (a word which originally meant a talk). Parliament has grown from

the original principle that in important matters such as making the laws the monarch ought not to act without counsel and consent, and it now consists of two Houses, the House of Lords, composed of lords spiritual and temporal, and the House of Commons representing the commoners.

**House of Commons.**—The principal share of parliamentary business is conducted in the Commons. Its business is divided into three branches: legislative, financial, and critical.

**Composition of the House of Commons.**—Its members consist of 630 citizens of the United Kingdom and Northern Ireland, who receive a salary. Women are eligible for membership. Adult citizens of both sexes have the right to vote at general elections subject to certain qualifications. The Speaker or chairman is elected by a free vote of the House from among the members. As Speaker he presides over debates with impartiality and safeguards the rights of members. He is the link between the House and the Crown. The life of a Parliament is limited to five years, although, on the advice of the Prime Minister, the Queen may dissolve Parliament and issue a proclamation calling for election of a new Parliament. Parliament is adjourned from day to day while in session. At the end of the session it is prorogued. At the expiry of its life it is dissolved. The work of the House is governed by rules called Standing Orders. Theoretically a member cannot resign. If he wishes to retire he applies for an office called "Stewardship of the Chiltern Hundreds," an historic office which, being an office under the Crown, disqualifies the holder from sitting in Parliament.

**Legislation.**—Legislation is the work of making laws. The law of this country consists of common law, statute law, and equity. One may describe the common law as that based on custom and usage as declared and expounded by judges. Statute law is the law made by Parliament, enshrined in Acts of Parliament or statutes of the realm. Parliament is thus concerned with the making of statute law. The classification of law is explained in another part of this section.

**How Laws are made.**—Any member of the House of Commons may present a Bill after giving formal notice, but the principal Bills are those introduced by the Government based upon its programme as outlined in the Queen's Speech. The Bill has to pass three Readings before it is agreed by the Commons. The First Reading is a formality. The House gets down to discussion at the Second Reading, when general principles as distinct from details are discussed. If these principles are approved, the Bill passes its Second Reading and is then referred to a Committee. This Committee is a Committee of the whole House, with the Chairman of Committees presiding in place of the Speaker (a proceeding adopted for the more important Bills) or it may be a Committee composed of a lesser number of members divided between the parties on relative strength in the House itself. Finance Bills and other money Bills go to a committee of the whole House. In Committee the Bill is examined clause by clause. After the committee stage follows the report stage. The House (with the Speaker) considers the Bill as reported to it by the Committee and considers whether further changes should be made. Where the House reports to itself this stage is a formality. The final stage in the Commons is the Third Reading (when only verbal alterations are allowed) and the House considers the Bill as a whole and whether it should or should not become law. The Bill having passed through all its stages in the House of Commons is sent to the Lords, who may reject or amend it, but they have no power to amend or reject a finance or other money Bill. If the two Houses differ and agreement cannot be reached by informal agreement, the Bill drops, for except as provided for by the Parliament Acts of 1911 and 1949 a Bill cannot be presented for the Royal Assent until the concurrence of both Houses has been obtained. Under the Parliament Act of 1911, the Lords had power to delay all Bills

except Money Bills for two years if they are unacceptable. The Parliament Act, 1949, reduced the Lord's delaying power from two years to one. The Lords can delay a Money Bill for only one month. When a Bill has been passed by both Houses or in accordance with the Parliament Acts 1911 and 1949, the final stage is the Royal Assent.

**Money Functions of the Commons.**—We return to the Commons and its second function (and one of its earliest in history) to provide the State with money. The Government cannot raise money by taxation (or in any other way) or spend money without the authority of Parliament; and this power of authority belongs exclusively to the Commons. The House can vote money only on the demand and on the responsibility of a minister of the Crown. The work of government, whether it be the maintenance of armed forces or education or health measures—all costs money. All monies raised by Parliament (taxes or loans) are paid into the Bank of England into a fund called the "Consolidated Fund," and all payments by the State are from this fund. There is thus one national till. Some taxes are permanent, and some imposed for a year at a time. Some expenditure is permanent (like interest on the National Debt), and some is granted annually by Parliament. The annual proposals of the Government for raising money are called the Budget. The proposals for spending the money are called Estimates.

**Critical Functions of the Commons.**—Parliament itself does not govern. The Queen's ministers are responsible for government and parliamentary government means that Parliament ensures that those ministers represent and have the confidence of the party which possesses a majority in the House; and further, that it controls the action of ministers by questions and criticisms. Any member may address a question to any relevant minister (being a member of the House). He may ask either for an oral or a written answer. Oral answers are given at Question Time, and supplementary questions may be put. No debate is allowed to arise. This practice is an important safeguard against bad administration or abuse, for it concentrates a powerful form of criticism on government action or inaction. Furthermore at the end of each sitting a half an hour is allocated for further development by a member of a matter on which he considers he has had an unsatisfactory reply. This is called raising matters "on the Adjournment." Or the House can ask for a return of information, although the Government lays papers before the House on its own initiative. These are called "Command Papers" because they are supposed to be presented by command of the Queen. Other methods of obtaining information are the appointment of a Royal Commission (like that on Capital Punishment) or a parliamentary committee or a departmental committee. Any member may propose a motion of condemnation of any member or department of the Government, and such a motion would become a vote of want of confidence if it were made by the leader of the opposition. The verbatim official report of the debates in Parliament is known as "Hansard," which is published on the morning following a debate. There is also a weekly edition of Hansard.

**House of Lords.**—There are about 790 members including royal princes, archbishops, dukes, marquesses, earls, viscounts, bishops, barons, and judicial life peers. It is the oldest second chamber in the world and the most hereditary in its character. The Lord High Chancellor presides. The House of Lords has two sets of functions, legislative and judicial. It is a party to legislation within the limits imposed by the Parliament Acts of 1911 and 1949. The judicial functions of the House of Lords sprang from the fact that it is the highest Court of Appeal for the United Kingdom. Only the nine Law Lords and those peers who have held judicial appointments hear these appeals, which are presided over by the Lord Chancellor. These decisions are final and become part of Common Law. In 1949 the Lords

expressed their desire that peeresses in their own right should be allowed to sit in that House.

**The Queen.**—We have seen that the Central Government is vested in the High Court of Parliament or The Queen in Parliament, consisting of the Queen and the two Houses. The Queen's tenure of the Crown holds for life (unless she abdicates), it is hereditary, and it is held by statutory right. The Queen is a constitutional monarch; she takes an oath at her Coronation to rule according to the laws and customs of the people. She is the link binding the United Kingdom with the independent countries of the Commonwealth (where she is represented by a resident Governor-General). The Queen is the fount of honour and justice in the realm. She is the head of the Forces, which are governed by "Queen's Regulations." She is also head of the Executive, that is all the work of the State is enacted in the name and under the authority of the Crown. She opens Parliament by reading a speech from the Throne in the House of Lords, and this speech, for which the Government is responsible, outlines the Government's programme for the session. Her assent is necessary before a Bill becomes an Act of Parliament.

**The Parties.**—We have said that the right of a minority to oppose is an essential of democracy, and this idea means that political parties are allowed to function. The party system implies a government party (which has the largest number of candidates) and an opposition known as Her Majesty's Opposition (the leader of which receives a salary). The party system emerged in the latter half of the seventeenth century as Parliament gained the right to be the law-making body. The original division was between Tories and Whigs, the former representing broadly country interests and emerging from the Cavaliers, and the latter broadly representing new interests and having their origin in the Roundheads. Thus of the three main political parties today, we may say that the Conservative Party's line of growth is from Cavalier to Tory, to Unionist and to Conservative; the Liberal Party's growth is from Roundhead to Whig and now Liberal; while the Labour Party is the youngest of the three. The Conservative Party advocates private ownership of land and the means of life and is inclined to take a cautious attitude to reform. The Liberal Party strongly advocates free trade and also supports private enterprise, but initiates and supports reform. The Labour Party distrusts exclusive reliance upon private enterprise and looks to State action or nationalisation to bring about a better distribution of wealth. In 1918 the Labour Party broadened its constitution to include "all workers by hand and brain" and first took office as the Government in 1924, but in a minority position. The first Labour Government with a majority of its own was that elected in 1945. Each party has a Leader in the House. The Leader of the largest party is the Prime Minister, and his chief supporting party colleagues are the Cabinet. The Leader of the main opposition party is the Leader of the Opposition. The rank and file of supporters are called Back Benchers. All parties have Whips, who discuss between them the arrangement of business and "whip" up members to vote in support of their party.

**The Executive.**—We must now turn from law-making by Parliament to the carrying out of the law. The work of applying the law and securing obedience is called the executive work of the Government. The Executive comprises five bodies; the Queen, the Privy Council, the Cabinet, the Government Departments or Departments of State and the Civil Service. The Queen as the Head of the State is the nominal head of the executive.

**The Privy Council** is the Queen's own Council, consisting of over 300 distinguished men drawn from all walks of life. Its function is to give private advice to the Queen. From it have sprung many organs of the constitution. For example, the Judiciary or courts of justice have grown from the Queen's Council sitting as a Court

of Justice, and today the Judicial Committee of the Privy Council is a body of distinguished lawyers acting as a Court of Appeal from courts of the Commonwealth. Many of our Government Departments have grown from Committees of the Privy Council formed for specific tasks, for example, finance, education, trade.

The Cabinet was originally a committee of the Privy Council. It consists of the principal Ministers of the Crown, and is responsible for deciding the policy of the Government on all matters affecting the country, whether on foreign or home affairs. It has also complete control of the Government Departments. It is thus the central link in the whole machine of government. Presided over by the Prime Minister, it generally includes the Lord President of the Council, the Lord Chancellor, the Chancellor of the Exchequer, the leading Secretaries of State, and other Ministers at the discretion of the Prime Minister. Cabinet meetings are held in secret. The Cabinet is responsible for the individual actions of its members. This follows from the requirement that a Minister's policy must be in agreement with Cabinet policy. Thus the Government have a common policy and act as one man. This is the meaning of the phrase "Ministerial responsibility."

**The Prime Minister.**—The office of Prime Minister, like the existence of the Cabinet, was not formally mentioned in law until recent times. He is the link between Cabinet and Queen. It is he who decides when to advise the Queen to dissolve Parliament. He is leader of the Government party in the House of Commons and gives a lead on policy. A recent writer has pointed out how the Constitution has, after long evolution, divided the functions of leadership and vested them in two personages—a Prime Minister who is temporary and removable by the will of the electorate, and the Queen, who, by contrast, embodies the principle of continuity.

**The Government Departments.**—The work of administering the laws is delegated to different Departments according to subject. At the head of each is a Minister, responsible for his work to Parliament, with an Under-Secretary, also a member of the Government. We may divide the Departments into six groups: the Defence Services, the Taxing Departments, the Social Services, the Post Office, Productive Departments and others.

**Defence Services and their Supply.**—These consist of the Board of Admiralty, the Army Council (War Office), the Air Council (Air Ministry), the Committee of Imperial Defence, and the Ministry of Supply.

**The Taxing Departments** consists of the *Inland Revenue*, which assesses and collects Income Tax, and the *Customs and Excise*, which collects taxes on certain goods when imported into this country and certain commodities produced in this country (e.g., beer, liquors), and taxes certain transactions (e.g., purchase tax) or activities (entertainment tax).

**The Social Services.**—Into this important group we may put the following:—

*National Assistance Board* conducts the administration of national assistance and non-contributory old-age pensions.

*Ministry of Pensions and National Insurance* operates pensions for death or disablement in war (including civilians) and the care of disabled and war orphans; and it also operates the National Insurance Acts and Family Allowances.

*Ministry of Labour and National Service* operates the Employment Exchange, the Appointments Department, Unemployment Insurance, Resettlement, Training of the Disabled, Factory Inspection, and Training Centres.

*Ministry of Education.*—The education services

are operated by the local education authorities, but the Ministry controls and guides such services.

*Ministry of Housing and Local Government* deals with housing and new towns, planning and control of the use of land.

*Ministry of Health* administers the National Health Service.

The Post Office employs more staff than any other department, and works the posts, telegraphs, telephones, and the Savings Bank. Through its 20,000 Post Offices it does a large number of tasks, such as paying out pensions and family allowances, and issuing wireless licences.

**Productive Departments.**—A number of other Departments produce essential and useful products. The *Ministry of Supply* organises the production of armaments and equipment, and the *Ministry of Works* supplies building material.

**Other Departments.**—There still remains some forty or more other Departments. The most important offices:—

*Treasury:* controls national finance and manages the Civil Service.

*Foreign Office:* conducts relations with foreign countries.

*Ministry of Agriculture, Fisheries, and Food.*

*Colonial Office* manages relations with Colonies, protectorates, protected states, and trusted territories.

*Commonwealth Relations Office* deals with affairs relating to self governing member countries of the Commonwealth and S. Rhodesia.

*Ministry of Fuel and Power* directs and controls the production and consumption of coal, gas, and electricity.

*Home Office* is responsible for Police, Prisons, Aliens, Children, National Fire Service, etc.

*Department of Scientific and Industrial Research.*

*Board of Trade* covers certain activities of industry and trade, except fuel and power, building, agriculture, and food. In September 1953 a Minister of State was appointed to give special attention to the promotion of exports and overseas trade.

*Ministry of Transport and Civil Aviation* controls all forms of transport and traffic and road construction; and directs civil aviation.

*Scottish Department of Agriculture* deals with agriculture in Scotland.

*Scottish Department of Health* directs and controls health services in Scotland.

*Welsh Affairs.* In 1951 the Home Secretary was also given the appointment of Minister for Welsh Affairs, with an Under-Secretary for that purpose.

**The Civil Service** consists of all employees in the Government Departments. They are employed by "The Crown," and their salaries are authorised annually by Parliament. The employees of Public Corporations (like the National Coal Board) are not Civil Servants, nor are those employed by local authorities. It was decided to introduce equal pay with men for most non-industrial women in the Civil Service by seven annual stages from January 1955. A Royal Commission reported in 1955 upon the reorganisation of the Civil Service. The Civil Service (leaving out the postal workers) is divided broadly into five classes: the Administrative; the Executive; the Professional, Scientific and Technical; the Clerical; and the Messengers, Cleaners, etc.

**The Reform of Parliament.**—So long ago as 1917 a Conference presided over by the Speaker of the House of Commons unanimously approved Proportional Representation in the larger boroughs and by a majority approved the Alternative Vote for the rest. The Alternative Vote appeared in a Bill in 1931. But these proposals have not been developed, although there have been requests for Committees to enquire further into them. In 1952 a Select Committee was set up to consider means of supervising "delegated legislation" e.g., statutory regulations and orders.

**Proportional Representation** is a method of allocating seats among the parties in accordance with the proportion which they receive of the total votes cast, so as to ensure the representation of minorities. At present the candidate who gains the greatest number of votes in a constituency gains the seat, although it commonly happens that the successful candidate polls less votes than the combined votes of his opponents. The effect of this must be a disproportionate reflection of the respective strength of parties in the country. Opponents argue that P.R. eliminates personal contact between voter and candidates because the constituencies under that system would have to be so large; and that by favouring small parties would promote political fragmentation of the country or "splintering."

**The Alternative Vote.**—Under this system an elector who has to choose from three candidates could indicate not only his first choice but also his second choice. If no candidate obtains more than half the votes after first choices have been counted, then second choices are also counted to decide who wins.

**Reform of the House of Lords.**—A controversy between the two Houses arose during 1947/48 on two matters, one the proposal to nationalise the Iron and Steel industry and the other upon the Commons' proposal to suspend capital punishment. During the course of this controversy about the House of Lords it was agreed, on the initiative of the Conservative Opposition, to set up an inter-party Conference to consider whether agreement could not be reached on the future of the House of Lords. The party leaders did agree provisionally on certain proposals. They agreed that the existing constitution of the House of Lords should be modified to ensure that the Second Chamber was complementary to and not a rival of the House of Commons and that there should be no permanent majority for any one political party. On the composition of the new House it was agreed that:—

1. The present hereditary Peers would not automatically be qualified to attend and vote.
2. Instead new "Lords of Parliament" would be appointed on grounds of personal distinction or public service. They would be drawn either from the hereditary Peers or commoners who would be created Life Peers. They would be paid and would be disqualified if they neglected or became unable or unfitted to perform their duties.
3. Women should be eligible to take their place in the Lords.
4. Peers who were not Lords of Parliament would be able to vote at elections and be candidates for the House of Commons.

But the Conference broke down on a point on which agreement could not be reached. It concerned the powers which should be vested in any reformed Upper House, and in particular the length of time that would be reasonable for the performance of its functions. A proposal for another informal Conference on the subject was made in 1953, but came to nothing. The House of Lords is said to be the only public institution in our country from which women as such are excluded.

**Public Corporations.**—Government has, especially since 1945, applied a process of nationalisation to certain industries. By that process Government becomes the owner of all the shares in all or most of the companies in some important industry. But long before 1945 social control had been exercised in regard to essential services such as water, gas, electricity, and transport by means of the Public Utility Companies. Before 1939 there were four State-controlled public corporations in existence—the British Broadcasting Corporation, the Central Electricity Board, the London Passenger Transport Board, and the Port of London Authority. Since 1945 many enterprises have been nationalised, the most important being the Bank of England, the National Coal Board, the

British Electricity Authority, the Airways Corporation, the Gas Council, and the British Transport Commission. These corporations, although in charge of national enterprises and subject to general governmental policy, are not Government Departments and are not staffed by Civil Servants.

## LAW AND THE COURTS.

**Criminal and Civil Law.**—The most obvious practical division of English law is into criminal and civil law. Criminal law treats of crimes, which may be defined as offences against the community, and whose commission is punished by the State, usually by imprisonment or a fine. With some exceptions every citizen has a right to institute criminal proceedings, but in practice this is usually done by the police or other official bodies, e.g., Government Departments, or in the case of serious crimes, by the Director of Public Prosecutions.

Civil law treats generally of a special relation between one citizen and another. To slander some one is a civil wrong, and so is a breach of contract. In such cases the injured party or "plaintiff" has a civil right of action against the other, the "defendant," and if successful he will be awarded "damages." These damages are intended as a compensation to the plaintiff, not as a punishment to the defendant (though incidentally they may be that as well). Often an act may be both a crime and a civil wrong, e.g., an assault or the injuring of an innocent pedestrian by a drunken motorist.

An important distinction between criminal and civil wrongs is that criminal proceedings, once started, cannot be abandoned except by permission of the court, while civil actions may be settled out of court or abandoned by the plaintiff at any stage.

**Common Law, Statute Law, and Equity.**—*Common Law.*—Another important division of the law is that into Common Law, Statute Law, and Equity. Common Law is the body of customary or "case" law which has not been enacted by Parliament, but which is to be found in the judgments of superior courts extending back over many hundreds of years. A judge will not admit that he "makes" law. When a superior judge has to decide a point of law not covered by statute, he refers to and is guided by the Common Law as embodied in these judgments, which constitute "precedents" and are binding upon him. In giving his judgment he does not declare what the law shall be, but only enunciates what it already is. For example, murder and conspiracy are Common Law crimes, and slander a Common Law "tort," or civil wrong. Their definitions and the law relating to them are judge—and not Parliament—made.

*Statute Law.*—Statute law is the law made by the Queen in Parliament, that is to say, approved as a Bill by both Houses of Parliament and then given the Queen's assent. It would be unconstitutional for the Queen to withhold her assent to a Bill which has passed both Houses of Parliament.

Both Houses must approve a Bill before it is presented for Royal Assent. Under the Parliament Act, 1911, passed as a result of a constitutional crisis, a Money Bill, may, after a month, become law without the Lords' approval, and a Bill other than a Money Bill if passed by the House of Commons in three successive Parliamentary Sessions. Under the Parliament Act, 1949, it is possible to secure the enactment of legislation, in spite of its rejection by the House of Lords, within a period of one year from the Second Reading, or nine months from the Third Reading in the House of Commons.

Statute law is supreme in three senses. First, it can override or overrule any part of the Common Law, or even its own previous enactments. Secondly, there is in theory no limit, not even a physical one, to what can be enacted by it; for example, it might even be possible to enact that a particular man was a woman, or that two and two were five, "for the purposes of the Act." Thirdly, there is no authority which can undo or

override its enactments except another Act, and a duly enacted Act of Parliament can therefore never be declared illegal. There is here a striking contrast with Acts of the United States Congress, which can pass only such laws as are by the terms of the American Constitution within its powers. Laws passed by Congress have on occasions been declared by the U.S. Supreme Court to be unconstitutional and therefore invalid.

**Equity.**—England is peculiar in possessing a second judge-made body of civil law known as "equity," which is administered in the civil courts concurrently with the Common Law. The system originated in the Middle Ages when persons seeking relief which the Common Law could not give them, invoked the aid of the Chancellor, "the keeper of the King's conscience." Originally the Chancellor's decisions and those of his deputies, delivered in the courts of Chancery, were founded more or less on principles of natural justice, but in time they became crystallised into a body of rules known as "equity." These two systems continued to be administered in different courts until 1873, when it was enacted that the civil courts should henceforth administer both systems concurrently. "The currents of law and equity flow in a single stream, but their waters do not mingle," and a lawyer has still often to consider the merits of his client's case both "in equity" and "at law."

The Chancery Division of the High Court is now principally concerned with the matters with which the Court of Chancery formerly dealt, that is, matters of which the Common Law took no cognizance, *e.g.*, trusts, or the specific performance of contracts.

**Crime Prevention and Detection.**—The primary duty of the police is the maintenance of law and order and the prevention of crime. They are also concerned with the investigation of crimes committed. There is no national police force, but about forty separate bodies under the immediate control of County and other local authorities. "Scotland Yard," for instance, is not a Central Government body, but merely the Criminal Investigation Department of the Metropolitan Police and does not investigate crimes outside the Metropolitan Police Area unless requested to. All police forces are, however, under the general control of the Home Secretary to ensure that conditions of work and pay are comparable throughout the country. To qualify for Central Government grants towards their upkeep, all forces are required to maintain a certain level of efficiency.

**Crime Investigation and Prosecution.**—Every citizen has a right to arrest a person whom he sees committing a serious offence, but a police officer has certain additional powers of arrest. When a crime is reported or suspected, it is the duty of the police, or in some cases of official bodies, to investigate the facts.

It is a presumption of English law that a man accused of an offence is innocent until his guilt is proved, and this is not considered to be done until the prosecution has shown not only that an offence has been committed, but that, beyond all reasonable doubt, the prisoner committed it. Otherwise he must be found not guilty and discharged. A man may not be tried twice for the same offence.

**The System of English Courts.**  
**I. Criminal Courts.**—1. *Courts of Petty Sessions.*—At the bottom of the ladder are the Courts of Petty Sessions, which can try minor offences punishable either by fine or imprisonment, with a maximum of six months' imprisonment for one offence and twelve months for two or more. These courts are presided over by not fewer than two local Magistrates, called Justices of the Peace, whose office is honorary, and who are appointed by the Lord Chancellor on the recommendation of the Lord Lieutenant of the County. Some officials, *e.g.*, Mayors during their term of office, are J.P.s *ex officio*. Most J.P.s are laymen, but all Petty-Sessional Courts are assisted by a  
F (65th Ed.)

trained magistrate's clerk, who is usually a solicitor.

These courts also act as courts of preliminary inquiry to determine whether there is a *prima facie* case (*i.e.*, a case that requires to be answered) against an accused which will require his being "indicted" for trial by jury. This they do by taking depositions from witnesses. If they decide that there is no *prima facie* case, the accused is discharged; if that there is such a case, he is committed for trial either to the Quarter Sessions or the Assizes. In many of the bigger towns a barrister known as a "Stipendiary Magistrate" is appointed to act as sole and permanent magistrate, and in London there are a number of such magistrates known as Metropolitan Police Magistrates.

2. *Quarter Sessions.*—These courts have a wide jurisdiction, but cannot try the most serious crimes, *e.g.*, murder, treason, or bigamy. Trial is by jury. The courts are of two kinds. Those which sit for the county are presided over by magistrates for the county; those for boroughs by experienced barristers known as "Recorders." Courts of Quarter Sessions also hear appeals from Petty Sessions.

3. *Courts of Assize.*—England and Wales are divided into a number of circuits of very ancient origin, each comprising a number of Assize towns. One or more judges of the High Court go on each circuit at least three times a year. Their criminal jurisdiction is unlimited, and they also deal with such civil cases as can be conveniently dealt with locally rather than at the High Court of Justice in London. A great many divorce cases are thus disposed of.

The Central Criminal Court, or Old Bailey, as it is popularly known, is the seat of the Assizes for the City and County of London and certain parts of the home counties. Because of the immense population of this area, the Sessions are held once a month, and four courts are held at a time.

4. *The Court of Criminal Appeal.*—This court is situated in the Royal Courts of Justice Building in London and usually consists of two judges of the Queen's Bench and the Lord Chief Justice. Appeals from Quarter Sessions and the Assizes lie to this court, which has powers to quash, reduce, or augment sentences on appeal.

5. *House of Lords.*—An appeal from the Court of Criminal Appeal lies to the House of Lords. This appeal is not, however, of right, and the "flat" or permission of the Attorney-General must be obtained.

The constitution of the House of Lords as a judicial body is discussed on another page.

**II. The Civil Courts.**—1. *The County Court.*—There are about 500 County Courts in England and Wales which are grouped into circuits (not the same as the Assize Circuits). A County Court Judge visits each court at least once a month. Broadly speaking, his function is to try civil actions when the amount involved is not over £200, or in some cases £500.

2. *High Court of Justice.*—The High Court of Justice is one of the two branches of the Supreme Court of Judicature, the other being the Court of Appeal, described below. The High Court deals with all civil cases, except those dealt with by the County Courts or by the civil side of the Assizes. Since 1873 it has been divided into three divisions:—

- (1) the Queen's Bench Division, which is principally concerned with Common Law cases (*e.g.*, defamation, breach of promise, damages for injuries, or breach of contract);
- (2) the Chancery Division, whose functions have already been outlined; and
- (3) the Probate, Divorce, and Admiralty Division, whose title is self explanatory.

3. *The Court of Appeal.*—Appeal lies as of right from decisions of the County Court and from the High Court of Justice to this court. Appeals are heard by courts consisting of three appeal judges, at the head of whom is the "Master of the Rolls." The court can dismiss an appeal, allow it or make a fresh order as the damages or costs, or order a new trial.

4. *The House of Lords.*—Appeal lies from the

Court of Appeal to the House of Lords. In some cases an appeal may be made without leave, in others leave of the Court of Appeal must be obtained. Only the "Law Lords" (or "Lords of Appeal in Ordinary"), who are eminent lawyers and life peers, and certain other high judicial appointees assist when the House of Lords is constituted as a judicial body to hear either civil or criminal appeals. They are presided over by the Lord Chancellor, who is the head of the English Judiciary. While other judges are appointed for life, his appointment is a political one, and he retains office only during the tenure of power of his party. He is, of course, always an eminent lawyer.

**Judicial Committee of the Privy Council.**—This is a committee of lawyers, drawn from the Privy Counsellors, who hear appeals from decisions of colonial and ecclesiastical courts.

**Juvenile Courts.**—This is a special kind of Magistrates' Court to deal with accused persons under the age of eighteen. The magistrates chosen are specially qualified for the work, and where possible a woman is appointed as one of the three Magistrates who constitute the Court. The Court is held in private away from the ordinary court room. The object of the Juvenile Court is to introduce into the trial a plan to reform the offender by providing for the care and protection which he may need, by removal from undesirable surroundings, and by subsequent education or training. In these objectives the Court has the co-operation of social workers, including Probation Officers.

**Probationary Officers** are attached to particular Courts, sometimes a Magistrates' or a higher court. Sometimes an offender is not sentenced to punishment, but is released "on probation," that is on the condition that he behaves well and follows directions given by the Court or by a probation officer. Such an officer is a trained man (or woman) who advises, assists, and befriends people who have been committed to his care by a court of law. The probation officer, by his assessment of the social background of the offender, can advise the court upon the wisdom of putting the offender on probation. The probation officer by his understanding can so befriend an offender as to provide a basis for his rehabilitation. He undertakes the "after care" of those released from prison or Borstal or approved schools, to which juveniles are sent.

**Legal Aid.**—If your means are small and you have reasonable grounds for taking proceedings in the High Court of Justice or Court of Appeal you can have the free services of a solicitor and, where necessary, of a barrister. A pamphlet explaining in broadest outline the main feature of the scheme for legal aid (under the Legal Aid and Advice Act 1949) is issued by the Law Society. The Society has set up Area Committees and Local Committees on the subject. You can obtain the address from any County Court, any office of the National Assistance Board or any Citizens Advice Bureau. Your Local Authority may also be able to give you the address. Full information is contained in a book published by H.M. Stationery Office entitled "Legal Aid under the Legal Aid and Advice Act 1949." No one should act on the assumption that he is eligible for legal aid until a decision is reached. The Act provided for free legal advice (apart from litigation) similar to the Poor Man's Lawyer Service. It is intended to extend the operation of Legal Aid to the County Courts so that it will be possible for a person to be assisted in cases of a very much smaller nature than can be heard in the High Court.

## OUTLINE OF INDUSTRIAL RELATIONS.

The economic progress of the country and its future welfare hinge so much upon healthy relations between employers and employees that some of the main aspects of industrial relations are here outlined. This account includes a description of Trade Unions and their organisation

and some approaches to industrial peace and welfare.

**The Working Population.**—The total working population in September 1955 was over 24 millions, over 16 millions being men, and nearly 8 millions women. Split up into the three main categories, there were over 4 millions in the basic industries; over 9 millions in manufacturing industries; and over 11 millions in other industries, in the professions, and in public administration. In the basic industries there were 1,713,000 in transport, etc., 1,057,000 in agriculture and fishing, and 860,000 in mining and quarrying. In the manufacturing industries there were 4,627,000 in metals, engineering, and vehicles industries (nearly half the total of those in manufacturing industries) and nearly a million in textiles (the next highest). In the third category 1,474,000 were engaged in building and contracting, and 4,090,000 were engaged in professional, financial, and miscellaneous service; the latter number did not include 578,000 in National Government Service and 737,000 in Local Government Service. At the beginning of 1956 the unemployed represented about 1.0 per cent. of the total number of employees.

**Government and Industry.**—To make planning on a national scale a success it was essential that Government and Industry should be able to consult each other and an Economic Planning Board has been set up consisting of representatives of both sides of industry and the Government Departments concerned. The Board meets under the direction of the Government's Chief Planning Officer, who thus has direct contact with both sides of industry for his vital work of advising the Government.

**The National Production Advisory Council.**—To secure planning on democratic lines it was appreciated that the understanding and co-operation of those expected to carry it out must be sought from the beginning. Among the more important permanent bodies which exist to see that this is done is The National Production Advisory Council on Industry, which meets under the chairmanship of the Chancellor of the Exchequer, with representatives of both sides of industry and of the Government Departments concerned. As its name denotes, the Council covers the problem of industrial production.

**The National Joint Advisory Council.**—While the Production Council just described deals with the wider problem of production, the Joint Advisory Council, under the chairmanship of the Ministry of Labour, is chiefly concerned with all matters affecting the relations between employers and workers. These two bodies and the Economic Planning Board ensure that a two-way channel of advice and information is open between the Government and both sides of industry.

**Regional Boards for Industry.**—This machinery of consultation has its regional side to enable it to be fully informed for the solution of local problems. There are therefore ten Regional Boards for Industry in England and Wales and a Scottish Board for Industry.

**Employers' Organisations.**—The British Employers' Confederation, together with the Trade Union Congress, have long been recognised as the authoritative means of consultation between the Government and organised employers and workpeople. The membership of the Confederation consists of the national federations in industries employing approximately 70 per cent. of the total industrial population of the country. The Confederation has represented British employers at the International Labour Organisation since that organisation was set up in 1919.

**Trade Unions** are a British institution with a long history during which they have changed so much that it is difficult to find a final definition. The Webbs defined a Trade Union as "a continuous association of wage earners for the purpose

of maintaining or improving the conditions of their working lives." We may say briefly that a Union is a permanent organisation of people whose livelihood is based upon a contract of employment. Besides being concerned in protecting the weaker members of the community, the Unions have participated not only in Joint Production Councils, but in the Industrial Councils assisting in the direction of the economic life of the nation. The Unions have responded to the demands made upon them by the community and have deepened their outlook by an increasing sense of social responsibility.

**Trade Unions and National Production.**—It was upon the advice of the Trades Union Congress during the early years of the Second World War, that the mechanism of war production was reorganised, and a National Production Advisory Council (referred to in an earlier paragraph) instituted. After the War most of the Joint Production Committees operating at the workshop level in thousands of firms collapsed; but in 1947 the need for increased production being as great as ever, they were revived. The number of workers covered by these Committees is estimated at over 3½ millions in workshops, collieries, shipyards, and elsewhere.

**Collective Bargaining.**—The wages and conditions of more than half the workers of the country are settled by machinery voluntarily set up by agreement between employers' organisations and Trade Unions for this purpose. These collective agreements although not legal contracts are honoured by both sides. They cover not only wages, but hours and overtime, holidays, training, relations between management and workers, procedure for avoiding disputes, etc. Trade Unions have preferred this collective bargaining with employers under a voluntary system rather than seek protective legislation, although legislation has been framed in certain necessary circumstances, such as the Factory Acts restricting the hours of work of women and young children.

**Voluntary Negotiations on Wages.**—The procedure for wage and other negotiations in the primary industries varies with the industry and often depends on long-established practice or custom. Thus in the building industry there has been a National Joint Council since 1920. In some other industries—for example, engineering and shipbuilding—joint conferences are called when a demand is formulated by either side. A Joint National Negotiating Committee was set up in the coal-mining industry in 1943, with a National Reference Tribunal which adjudicates where the Committee cannot agree.

**Joint Industrial Councils.**—These Councils offer a pattern of voluntary negotiating machinery. This is a system whereby in an industry there are national and district councils and works committees composed of representatives of employers and workers to discuss and reach agreement on subjects of joint concern. The basis of the system is the recognition of organisation on the one side through employers' associations and on the other through Trade Unions. The system was recommended by the Whitley Committee on Relations between Employers and Employed, appointed by the Government in 1916, and their recommendations were accepted by the Government not only for industry, but for the public services. About 100 J.I.C.s were formed after the first world war and a large number of Works Committees were also formed; but after a time many of these bodies ceased to operate. The second world war bringing a fresh challenge and need to organise industrial relations on a sound basis, led to a revival of J.I.C.s and there are now over one hundred of these bodies. They vary considerably in structure, in degree of authority within the industry, and in the nature and extent of their activities. The industries concerned include wool, hosiery, boots and shoes, chemicals and branches of retail distribution. The Whitley system had always been successfully applied in the Civil Service.

**Wages Council.**—In addition to these voluntary methods the Wages Council Act of 1945 formed, by law, in certain industries, Councils composed of equal numbers of employers and work people and a number of independent members to fix minimum wages, enforceable by law. The Act thus extended the powers of the old Trade Boards which had been set up to deal with "sweated" trades. There are now over sixty Wages Councils. Special legislation has been necessary to regulate wages in three industries: agriculture, catering, and road haulage.

**Methods of Settling Disputes.**—It must be remembered that the majority of disputes are settled by direct negotiation and the use of voluntary joint machinery, which in some industries includes recourse to arbitration.

**Voluntary Arbitration.**—Under the Conciliation Act, 1896 and the Industrial Courts Act of 1919 the Minister of Labour may take steps to promote a settlement in any trade dispute reported to him or on behalf of the parties. No action is normally taken until any suitable negotiating machinery has been fully used. Both Acts provide for arbitration by consent of both parties. Broadly, the Minister may refer disputes to arbitration by the Industrial Court, by single arbitrators, or by Boards of Arbitration. Arbitration awards under these two Acts are not legally binding on the parties, but since they are the result of joint application to the Minister they are almost invariably implemented. The Industrial Courts Act, 1919 also empowers the Minister to appoint Courts of Inquiry to inquire into the causes and circumstances of a dispute. The Court of Inquiry has no power to enforce settlement, but its report often contains recommendations which pave the way for a settlement.

**What Can a Court of Inquiry Do?**—The Court of Inquiry whose interim report averted a threatened railway strike in January 1955, was the subject of much public discussion, because it enunciated a new doctrine. It declared there was no substance in the argument which had been used by the Transport Commission that there is an absolute statutory bar which prevents the Commission from paying such rates of wages as may involve them in any particular year in a deficit. The question was asked whether such a Court of Inquiry had the right to interpret an Act of Parliament, and, despite previous assumptions, lay down general principles for the payment of wages in a nationalised industry.

**Compulsory Arbitration.**—The Industrial Disputes Order 1951 provides a form of compulsory arbitration. Under this Order either party to an industrial dispute may report the dispute to the Minister of Labour and National Service and, provided certain conditions are satisfied, the Minister is required to refer it to the Industrial Disputes Tribunal for settlement. An award of the Tribunal becomes an implied term of the contract between the parties, and is thereby enforceable in the civil courts.

**Strikes and Lock-outs.**—Negotiating machinery is not perfect—in common with other things in life—and conciliation, despite great goodwill, is not invariably successful. In the last resort therefore a strike may break out, or the employers may lock-out the workers.

**Membership of Unions.**—The aggregate membership of Trade Unions in the United Kingdom at the end of 1954 was about 9,495,000. This was about 35,000 more than in 1953. The total number of trade unions known to have been in existence at the end of 1954 in the U.K. was 674. Thirty-three unions had a total membership of nearly 7½ million members and seventeen of these had a total membership of nearly 6½ million members or 67 per cent. of the total membership of all unions. There are still 372 unions with fewer than 1,000 members each, and most of these have fewer than 500 members.

The following table gives in *thousands* the in-

Industrial distribution of trade-union membership at the end of 1954 :—

	Thousands
General Labour Organisations . . . . .	2,078
Agriculture, Forestry and Fishing . . . . .	148
Coal Mining . . . . .	840
Other Mining and Quarrying . . . . .	7
Treatment of Non-Metalliferous Mining Products other than Coal . . . . .	37
Chemical and Allied Trades . . . . .	20
Metal Manufacture, Engineering, Shipbuilding, Electrical Goods Vehicle and Other Metal Trades . . . . .	1,803
Cotton . . . . .	219
Other Textiles and Textile Finishing . . . . .	173
Leather, Leather Goods, and Fur . . . . .	17
Clothing (except Boots and Shoes) . . . . .	135
Boots, Shoes, Slippers, etc. . . . .	91
Food, Drink, and Tobacco Manufacture . . . . .	62
Manufacturers of Wood and Cork . . . . .	125
Paper and Printing . . . . .	316
Other Manufacturing Industries . . . . .	13
Building and Contracting . . . . .	488
Gas, Electricity, and Water . . . . .	41
Railways . . . . .	540
Other Transport and Communication (excluding General Labour Unions) . . . . .	446
Distributive Trades . . . . .	394
Insurance, Banking and Finance . . . . .	93
National Government Service . . . . .	359
Local Government Service . . . . .	441
Education . . . . .	342
Other Professional and Business Services . . . . .	192
Theatres, Cinemas, Sports, etc. . . . .	85
Other Services . . . . .	2

**Evolution of Unions.**—The total membership of Trade Unions at the end of 1952 was the highest ever recorded (9,526,000). There was a slight drop of 0·7 per cent. in 1953 and a rise of 0·4 per cent. in 1954. By amalgamation the number of unions had decreased to 674 in 1954 from over a thousand in 1940.

**Organisation of Unions.**—A craft union is a "horizontal" one which embraces all the skilled workmen of a single trade, so that it includes workers of a particular kind in many industries. An industrial union on the other hand is a "vertical" one since it takes in all workers in a particular industry whatever their trade or skill. Many of the craft unions have opened their membership to less skilled workers closely allied to their work. Thus some craft unions have closely approximated to industrial unions. The National Union of Mineworkers comes nearest to being the industrial union which its title denotes. Craft unions and industrial unions have existed side by side in a given industry or service. For instance, in the railway service there are three unions, one an industrial union catering for the workers in and about the railways, a union of railway clerks and a union of locomotive engineers. Craft unions and industrial unions are able to co-operate in several Federations such as the Federation of Building Trades Operatives and the Confederation of Shipbuilding Unions; and the T.U.C. is encouraging the growth of Federations. Federations like the Printing and Kindred Trades Federation consist of craft unions acting together for certain common purposes. A further kind of union which has grown rapidly is the general union. Of this type, the Transport and General Workers Union is the largest. It is a characteristic of the general union that alongside a large body of workers engaged in a special industry, the remainder come from a multitude of trades.

The Trades Union Congress was founded at Manchester in 1868. It formulates the general economic and social policy of the trade-union movement, promotes trade-union education, resolves inter-union disputes and represents the movement internationally. A Trade Union in affiliating to the T.U.C. does not yield up any of its independence. The unions affiliated are divided into nineteen trade groups, each of which has allocated to it a number of seats on the General Council of 33 members. But the election

of these representatives is undertaken by a general vote at Congress.

**Trades Councils** are the local counterpart of the T.U.C. composed of delegates elected by affiliated union branches. They have been in existence for nearly a hundred years. Some of the Councils have Committees specially concerned in the organisation of women workers. The Councils appoint representatives to such bodies as Local Employment Committees, Insurance Advisory Committees, and Hospital Management Committees. The potential scope of their activities has thus been widened by the growth of the Welfare State. In England and Wales the trades councils are grouped into federations; and the T.U.C. has developed regional machinery.

**The Future of Trade Union Development.**—The following possibilities have been discussed of trade-union development in the future. First, a re-organisation of the central machinery so that the same members are not automatically re-elected to the General Council of the T.U.C. By the setting up of an inner cabinet the services of leaders who have left their Unions could be secured. Second, the powers of this inner cabinet and of the General Council would need to be greater than those of the present General Council as compared to the constituent unions. Third, parallel with this change, it has been advocated that there should be much devolution from the headquarters and district offices of unions to the workshops. This would be facilitated if union branches were founded upon a work-place basis rather than upon a residential area. It has been further urged that the unions should initiate large-scale educational programmes for union officers and members; and that it should attract higher attendances at branch meetings by spreading knowledge about the conduct of meetings, the sifting of business, and the most attractive ways of holding discussions.

**The International Labour Organisation** collects facts about labour and industrial conditions and formulates minimum international standards. It is an association of states and is controlled by representatives of Governments and of Employers' and Workers' Organisations. Its purpose is to promote social justice throughout the world, and it aims to eliminate international trade rivalries based on bad social conditions. Each State sends four delegates to the Conference, two representing the Government and the other two representing respectively the employers and the workers of the country. A large number of Conventions and Recommendations have been adopted relating to unemployment, hours of work, holidays with pay, the employment of women and children, safety and welfare, colonial labour, conditions of employment at sea, etc. This work, which commenced in 1919, has proved one of the most successful adventures in international co-operation.

**Industrial Welfare.**—The Industrial Revolution, which began in Britain about 1750, brought appalling conditions in the factories for men, women, and children. They worked long hours under unhealthy and dangerous conditions, and the rates of sickness, accident, and death were very high. From 1802 onwards, various Acts were passed in an attempt to alleviate these conditions, but it was not until the Act of 1833, which provided for the appointment of inspectors, that any real progress was made. This Act, which applied only to textile mills, limited the hours of work of children to forty-eight in the week, and of young persons of thirteen but under eighteen years of age, to sixty-nine. Employers were made responsible for securing the education of children employed by them, and a standard of cleanliness by periodical lime-washing of the workrooms was laid down. Later Acts enlarged the scope of the legislation to all classes of factories, and extended its requirements to cover such matters as fencing of dangerous machinery, ventilation, and suppression of dust. From the beginning of this century various Codes of Regulations have been made under the Acts, dealing with the precautions

necessary in particularly hazardous or unhealthy processes. The operative Acts are now the Factories Acts of 1937 and 1948. These contain requirements as to cleanliness, overcrowding, temperature, ventilation and lighting of factory buildings, the safeguarding of dangerous machinery, and the construction, maintenance and examination of potentially dangerous plant. The provision of drinking-water, washing facilities, accommodation for clothing, first aid, and suitable facilities for sitting are also dealt with in these Acts. Hours of employment of young persons under sixteen are limited to forty-four hours a week, and of women and young persons over sixteen to forty-eight hours a week (except for a limited amount of overtime). All young persons—that is, those who have not reached the age of eighteen years—have to be medically examined within fourteen days of starting work in any factory, and thereafter yearly until they reach the age of eighteen.

**The Human Factor in Industry.**—Since the First World War industrial management generally has realised more clearly that “people matter” and require individual consideration. Before then the main factors taken into account in making an industrial decision were financial, mechanical, and organisational. Today the human factor is recognised of at least equal importance. While the greater strength of the trade unions and full employment have contributed to this change of attitude, it has also received support from the findings of social scientists.

Concentration of attention on keeping the factories well staffed has resulted in the establishment of specialised personnel departments in most firms of medium or larger size. The Personnel Officers in charge recruit and screen applicants (before their actual selection by departmental managers), and help them to settle down; the responsibility for their training and promotion is likewise shared. The Personnel Officer is also concerned to promote the health, safety, and satisfaction which the employee finds in his work. On the extent that this is achieved largely depends the morale of the working group, assuming that the incentives and personnel policy of the firm are adequate and supervision satisfactory. But over and above this, co-operative attitudes depend upon mutual understanding, and to promote this the personnel officer concerns himself with improving communications and consultation on personnel problems between management, foremen, and employees.

Technical assistance and information on industrial welfare and personnel management is available to their members and member firms from The Industrial Welfare Society and The Institute of Personnel Management. Through the Personnel Management Advisory Service of the Ministry of Labour also, advice and assistance is provided to individual firms and organisations on matters of policy or specific personnel problems.

**Industrial Psychology.**—The National Institute of Industrial Psychology has taken an active part in the development of that branch of knowledge in this country. There have been three main lines along which the subject has developed. During the first phase, after the First World War, hours of work, physical conditions, fatigue, and working methods were studied. In the second phase the psychology of individual differences was found to explain variations in capacity and aptitude, and out of this developed vocational guidance, the selection and placing of workers and their systematic training in working methods. Finally, came a phase characterised by emphasis on social psychology, in which problems of morale and the social atmosphere of work came into greater prominence.

**Training Within Industry for Supervisors.**—This scheme was introduced into the United Kingdom by the Ministry of Labour after a study of the application of the results of the scheme in the United States.

The scheme is concerned with the development of the skills of instructing, leading, and improving methods. It seeks to develop these skills by means of three training programmes: (i) *Job*

*Instruction*, which helps a supervisor to develop skill in instructing new workers, in directing experienced workers, and in the general transmission of information incidental to his daily work. (ii) *Job Relations*, which deals with the techniques of everyday leadership, the maintenance of proper working relationships, and the correct handling of the “human” aspects of supervision. (iii) *Job Methods*, which provides the supervisor with a systematic approach to the improvement of working methods, and helps him to make best use of the resources available to him. These training programmes are generally presented on the firm's premises, and the order of programme presentation is adapted to the needs of the organisation. The main purpose of T.W.I. is to develop the skills of supervision in close relationship to the daily work undertaken by a supervisor. It is not claimed to be in itself a complete system of supervisory training, but is widely regarded within industry as providing a sound basis for other forms of supervisory training. The Ministry offers a free-of-charge introductory service matched to the varying sizes and needs of firms. This service provides information to management on the potential benefits of the scheme and also for the training of employees in the further development of T.W.I. within the organisation. Further details of the scheme may be obtained from any of the Regional Offices of the Ministry. An expert can be made available upon request in order to outline the service most appropriate to the particular organisation.

**Employment of Disabled Persons.**—Under the Disabled Persons (Employment) Act, 1944, there is a Disablement Resettlement Officer at each Employment Exchange with the special duty of helping and advising men and women handicapped by disablement to get and keep suitable employment, or work on their own account. The provisions of the Act include the setting up of a register of disabled persons; and obligation on certain employers to employ a quota of persons so registered; and the power to designate classes of employment which are considered especially suitable for disabled persons. The Act also empowers the Minister to provide, or assist others to provide, courses of vocational training and industrial rehabilitation, and facilities for the more severely disabled to be trained and employed under special conditions. Registration under the Act is voluntary, but is an essential part of the scheme, since it identifies disabled persons eligible to benefit from the employment provisions of the Act.

**Youth Employment Service.**—The Youth Employment Service gives vocational advice to young people under eighteen years of age, or beyond that age if they remain at school; assists them in finding suitable openings; and keeps in touch with them during the early years of employment. The central administration of the Service, in accordance with advice given by the National Youth Employment Council and accepted by the Minister of Labour and National Service, is the responsibility of the Central Youth Employment Executive, consisting of representatives of the Ministries of Labour and Education and the Scottish Education Department. In most areas the Service is operated locally by the Local Education Authorities, but in some, where they have not exercised their option to do so, it is operated from the Ministry's Employment Exchanges. A further function of the Central Youth Employment Executive is to advise industries on the setting up of national joint recruitment and training schemes for young entrants.

**Employment for the Older Person.**—In recent years there has been a new attitude towards the older person and a desire to give older men and women who are fit and efficient the opportunity to work. The proportion of men past 65 and women past 60 is greater than ever before, and their numbers will continue to grow. Similar changes are taking place just below these ages. In the ten years before 1962 the number of people aged 50 to 60 will grow by about one-sixth. At the same time the number of younger people is going down. So jobs must in future be done to

a greater extent by older persons. A National Advisory Committee on the Employment of Older Men and Women recommends giving older people a fair chance on their merits to compete for available jobs. If you are about to retire you should ask yourself whether you will have enough to interest and occupy you. It is usually easier to continue in the old job rather than find a new one. If you do not retire, for every six months' work beyond 65 (60 for women) you are increasing your National Insurance pension.

**The Employment Exchanges of the Ministry of Labour** (of which there are nearly 1,000 throughout the country) provide a service for bringing together employers wanting workers and men and women looking for employment. This employment service is there to help not only the worker who is unemployed but also workers in employment.

**Appointments Offices of the Ministry of Labour** offer a specialist employment service for professional and managerial or senior executive posts. Appointments Offices are at London (1-6 Tavistock Square, W.C.1); Manchester (Aytoun Street, Manchester, 1); and Glasgow (450 Sauchiehall Street, Glasgow). There are also special Employment Exchanges in other towns.

**Technical and Scientific Register.**—This is an employment and careers advice service centralised in London (Aimack House, 26 King St., St. James's Square, London, S.W.1) for scientists, technologists, professional engineers, architects, and surveyors.

**Careers.**—There are pamphlets (which may be bought for a few pence or seen at the Employment Exchange Office) on over fifty careers. A summary of careers information is given in a book (published by the Stationery Office, 3s. 6d.) entitled *Careers Guide: Opportunities in the Professions and in Business Management*. Information about teaching is contained in a leaflet *Notes for the Intending Teacher*, to be obtained free from the Ministry of Education, 11 Bryanston Square, London, W.1.

**National Service.**—Male British subjects ordinarily resident in Great Britain who have attained the age of 18 but not 26 (or 30 in the case of registered medical practitioners or dentists) are liable for military service, under the National Service Acts 1948 to 1950. Certain classes of men are not liable to be called up. Full details are set out in the Ministry of Labour's leaflet NL 2, which also contains notes on part-time service, conscientious objectors, and postponement of liability to call up.

**Reinstatement in Civil Employment.**—An employer is required under the National Service Act 1948 to take into his employment, if it is reasonable and practicable, former employees who are persons to whom the Act applies. Anyone who claims that he has rights under the relative Acts which are being, or have been, denied him, may apply to a Reinstatement Committee set up to determine questions involved in applications made to them. A fully explanatory pamphlet, REL 1 (NS), can be obtained from the Local Office of the Ministry of Labour and National Service.

**A New Industrial Revolution?**—In 1954 the Secretary to the Department of Scientific and Industrial Research drew attention to the likely far-reaching consequences of the increasing use of electronic machines which have been given the label of "electronic brain." These machines are already becoming widespread in many industries and activities where work previously occupied a large number of workers. It is virtually certain that electronic machines will come into wide use. The coming of these machines foreshadows a large reduction in the size of our clerical labour force (some 2 million people at present). The introduction of machines in the eighteenth and nineteenth centuries was made without under-

standing of human relations, and the introduction of the electronic machines of the 20th century will need care and study to prevent damaging social consequences. The prospects, on the other hand, can be very great, for we may be in sight of being able to remove the boredom of repetitive detail.

## OUTLINE of the BRITISH COMMONWEALTH.

The Commonwealth is a free association of eight sovereign, independent States—the United Kingdom, Canada, Australia, New Zealand, South Africa, India, Pakistan, and Ceylon—together with certain dependencies. Southern Rhodesia is, as it were, a junior partner in the Commonwealth, as the United Kingdom retains full responsibility for its external affairs, although it is a self-governing Colony having full responsibility for its internal affairs (with the exception that United Kingdom approval is required for legislation affecting the African population). The United Kingdom, Australia, New Zealand, and the Union of South Africa have dependencies for which they are independently responsible. So vast and complex an association has not been easy to define with precision. For a long time the term "British Empire" was used, and the self-governing countries (other than the United Kingdom) were called "Dominions." These terms have now given place to "Commonwealth" or "Commonwealth of Nations" and "Members of the Commonwealth." The last term describes the eight sovereign countries named in the opening of this paragraph. Other parts of the Commonwealth, such as Colonies, while they may be described as "Commonwealth countries" are not *Members of the Commonwealth*.

**The Nature of the Commonwealth.**—The Commonwealth is not a federation, for there is no central government, defence force, or judiciary, and there are no rigid obligations or commitments between them. Nor is it a contractual association like the United Nations. Like the United Kingdom itself the Commonwealth of Nations has no written constitution. But all its members have a broad community of interests, and they are bound together by a common sense of ideals and by a common interest in the maintenance of peace, freedom, and security. Although the Commonwealth includes about a quarter of the total population of the world about three-quarters of the Commonwealth's people live in India. The White population of the Commonwealth is between one-seventh and an eighth of the whole. The diversity is further illustrated in religion, for the Commonwealth includes over 200 million Hindus, 100 million Moslems and 80 million Christians. The same variety appears in climate and natural resources. But in spite of diversities of race, religion, language, and tradition, members share a common political heritage which has given rise to a broadly common pattern of institutions.

**The Common Heritage.**—All members have certain important constitutional features in common. They are parliamentary democracies, their laws being made with the consent of a freely elected parliament after discussion there. The government holds office because it has the support of a majority in that parliament. Ministers, who must be members of parliament, are collectively responsible for the actions of the executive and must answer in parliament for all governmental administration. These salient constitutional features are similar to those described above in the Outline of Central Government. With only two exceptions the Parliaments of Commonwealth countries have two chambers. The lower houses are elected by secret ballot on a basis of adult suffrage, and they have the power of the purse, since they alone can originate or amend financial legislation.

**The Sovereign and the Commonwealth.**—At the head of each of the parliaments of the Commonwealth—except those of the republics of India and Pakistan—is the Queen, in whose name the administration is carried on. The Queen's legislative

power is a formality—she reigns, though she does not rule; but she provides the element of continuity in the administration. The Queen is, therefore, Queen of the United Kingdom, Canada, Australia, New Zealand, South Africa, and Ceylon, and she is the symbol of their free association in the Commonwealth. India and Pakistan being republics with a President as Head of State, do not owe allegiance to the Queen, but accept her as the symbol of the free association of the member nations of the Commonwealth and as such the Head of the Commonwealth. The Queen has, therefore, in the six countries named above, a relationship with the individuals comprising each country and also a relationship with the nation as a collective entity. In the case of India and Pakistan she has only the latter relationship.

**The Commonwealth in the World.**—The Commonwealth as a whole, including the dependent territories, covers roughly speaking a quarter of the world's land surface and contains about a quarter of its population. The nations vary widely as has been explained, not only in size, background, geographical position, race, religion, language, but also in composition of population, industrial growth, and world importance. It is natural, therefore, that the approach of the different countries to international questions should vary, and on particular occasions they have voted on opposite sides in the United Nations. The entry of the three Asian countries—India and Pakistan in 1947 and Ceylon in 1948—into the Commonwealth has brought new influences and outlook into the councils of the nations. Accepting the democratic traditions of the Commonwealth as their own, the new partners stand as an essential bridge between Asia and the West. Australia, too, as a country which is of the West but not in it, in the East but not of it, is also a valuable interpreter between the two. Similarly, Canada because of her geographical position can act as interpreter between the United Kingdom and the United States.

**Status of Member Nations.**—The subordination of the Dominions, as they were then called, to the United Kingdom had ceased for all practical purposes many years before that fact was embodied in the Statute of Westminster, 1931. The recognition of a situation already existing was made in the following words:

It is in accord with the established constitutional position that no law hereafter made by the Parliament of the United Kingdom shall extend to any of the said Dominions as part of the law of that Dominion otherwise than at the request and with the consent of that Dominion.

The United Kingdom Government cannot declare war or make peace for another Member of the Commonwealth of Nations or determine its foreign or fiscal policy. And that is true, of course, of every Member of the Commonwealth of Nations with regard to every other Member. They make their own laws and they decide their own policies. Now that the independence of Members of the Commonwealth is no longer in question there is a growing consciousness of interdependence—the added security and prestige and wider opportunities which flow from association in the Commonwealth.

**The Right to Secede.**—"The essence of the Commonwealth relation is that it is a free association of nations, with a common purpose, who belong together because they have decided of their own volition to give and to take their fair share in a world-wide partnership." These words were used when the Burma Independence Bill 1947 was being discussed in the House of Lords by Lord Listowel, then Secretary of State for Burma. "We do not regard membership of the Commonwealth," he said, "as something to be thrust by force upon a reluctant people, but as a priceless privilege granted only to those who deeply desire it and are conscious of its obligations as well as of its advantages." Parliament passed the Act whereby Burma became an independent country. But the Member states of the Commonwealth do not for the most part think in terms of the right to

secede. It is a basic assumption that the Commonwealth is not only a voluntary and friendly but also a lasting friendship, providing the basis for long-term planning. In 1948 Eire declared its separation from the Commonwealth, and Parliament next year passed the Ireland Act 1949, recognising that Eire (to be known henceforward as the Republic of Ireland) had ceased to be a part of the King's dominions, while providing that the Irish Republic should not be regarded as a foreign country.

**Defence.**—Each Commonwealth nation is responsible for the organisation and training of its own defence force, and its military action is in no way bound by any decision of the United Kingdom. There is, of course, discussion between the Governments on important questions of policy, and considerable practical co-operation by such means as the exchange of training facilities, standardisation of equipment, and combined exercises.

**Consultation.**—Everyone of the Member nations, as we have seen, enjoys unfettered control of its own policy. It is, however, vital to the maintenance of the Commonwealth relationship as it has developed that there should be community of view and co-operation in action on all matters of common concern. There has therefore been evolved an elaborate system of consultation, including periodical Conferences.

**Colombo Conference 1950 and after.**—It had been suggested that, in the intervals between meetings of Commonwealth Prime Ministers, occasional meetings on foreign affairs should be held at a ministerial level. The first of these meetings was held at Colombo in January 1950, Ceylon being an appropriate meeting place at a time when Asia was the main focus of interest. The Conference recognised that the political stability of South-east Asia depended mainly on the improvement of its economic conditions. The Colombo Plan which emerged is described under that heading in the "Outline of Asian Changes" on p. 142.

**Commonwealth Conference 1955.**—At this conference it was announced by Mr. Mohammed Ali, the Prime Minister of Pakistan, that that country was about to adopt a republican form of Government but desired to remain a member of the Commonwealth. It was agreed that Pakistan should be a full member of the Commonwealth after becoming a republic. Meeting at a time of tension in Formosa, the Conference welcomed the end of hostilities in Indo-China. The Conference did not discuss, as had been expected by some, the question of republican status for South Africa.

**The Colonies.**—As stated in the opening passage of this outline, the United Kingdom in common with other members of the Commonwealth, has certain dependencies which are described as "The Colonies." But this is a loose term, for "the Colonies" are not really all Colonies in the strict sense. What are loosely spoken of as Colonies are properly divided into Colonies, Protectorates, Protected States, and Trust Territories. Colonies (properly called Crown Colonies) are overseas territories which have been annexed to the British Crown. The British Government is responsible for their affairs, both internal and external, and for their defence, and their peoples are British subjects. Examples of Colonies are Barbados, Hong Kong, and Fiji.

**Protectorates** are governed in the same way as Colonies, but have not been annexed. The peoples of Protectorates are not British subjects but British-protected persons, and examples are Uganda, Zanzibar, and the Solomon Islands.

**Protected States** are countries which, while retaining their own sovereignty, have entered into treaties giving the British Government certain rights and responsibilities in them. Their peoples are British-protected persons. Examples are Brunei, Tonga, the nine States (but not the two Settlements) of the Federation of Malaya.

**Trust Territories** are those territories, former colonies of nations defeated in war, whose administration is entrusted to Britain by the United Nations Trusteeship Council. Trust territories are governed on the same lines as Colonies, but a detailed report on them is sent to the United Nations each year. Their people are British-protected persons. Of the ten trust territories under U.N. Tanganyika is administered by the United Kingdom, the Cameroons by Nigeria, Togoland by the Gold Coast, Western Samoa by New Zealand, and New Guinea and Nauru by Australia.

**The Countries of the Commonwealth.**—On pages 380-81 (at end of the Gazetteer) is a list of all the countries of the Commonwealth showing their land area and recent estimates of population. The list distinguishes between the sovereign members and the British dependent territories, and classifies the latter according to the kind of dependency. Not all the British dependencies come exactly within the definition either of Colony or Protectorate, since, for historical reasons, many come partly under one heading, partly under another. Thus Kenya, Nigeria, the Gold Coast, Gambia are all part Colonies, part Protectorate.

**Forms of Government within Dependencies.**—There are many forms of government within the dependent countries, and within each territory the relations between the Governor responsible to the British Government and the assembly representative of local opinion are continually developing. Though their constitutions vary widely, one can make certain broad distinctions. There is a large group of territories whose peoples exercise a direct and important influence over their government without controlling it. As examples one may take Jamaica, the Gold Coast, and Nigeria, all of which colonies have received new constitutions in recent years. Their Legislative Councils are powerful and widely representative bodies, by no means entirely under official control. Such territories are on the way to self-government. But there are other colonies with no large measure of representative government. Though, like the others, their people usually have some representation on the Legislative Council, there is more direct official control. Political progress is constantly going on inside the Commonwealth. The new Constitution of British Guiana was suspended in 1958.

**Malta.**—A Round-table Conference on the future of Malta recommended that Malta, if it chooses, should be given representation at Westminster. It suggested that there should be three Maltese representatives and that they should be elected in the same way and under the same laws governing representation as are members of the United Kingdom. A referendum was to be held in Malta in February 1956.

## OUTLINE OF THE UNITED NATIONS.

**The origin of the United Nations.**—The United Nations, on January 1, 1942—while the war was still being fought—had made a pledge to act together after the war was over. Great Britain, U.S.A., Russia, and China made the first draft of a new World Peace Organisation in 1944 at Dumbarton Oaks, near Washington. There was a strong resemblance in the Charter to the Covenant of the League of Nations, which had been the international organisation between the two World Wars. But an Economic and Social Council was added to help the Assembly on a wide range of subjects. The right to take action to keep the peace was centralised in a Security Council of eleven. How this Security Council was to vote to arrive at decisions was a matter of supreme importance and was left unsettled until the Agreement at Yalta in February 1945.

**San Francisco Conference, 1945.**—The Dumbarton Oaks plan and the Yalta interpretation on voting in the Security Council thus formed the basis of discussion at the San Francisco

meeting of fifty States (some two-thirds of the World and all still at war, some of them fighting for existence) from April to June 1945.

**Charter of the United Nations.**—The Charter of the United Nations was signed on June 26, 1945. The name of United Nations was adopted at the suggestion of President Roosevelt. The purposes of the United Nations can be divided into four groups (security, justice, welfare, and human rights) and the nations undertook to carry out four main duties (to settle disputes peacefully, to refrain from threatening or using force, to assist in carrying out the Charter and not to assist an aggressor).

The four purposes are interrelated. Security is essential for peace. But insecurity, which always threatens peace, arises from a sense of injustice. Therefore UN seeks to maintain justice and friendly relations based on equal rights of peoples. Further, well-being is an essential condition for peace, and UN's third aim is the promotion of better standards of life. Finally UN affirms faith in the human rights of all without distinction of race, language, sex, or religion.

**Membership of UN.**—The original members are those States who were present at the San Francisco Conference or had signed the original United Nations declaration on January 1, 1942, fifty-one in all. They were:—

Argentina	Lebanon
Australia	Liberia
Belgium	Luxembourg
Bolivia	Mexico
Brazil	Netherlands
Byelorussian S.S.R.	New Zealand
Canada	Nicaragua
Chile	Norway
China (Nationalist)	Panama
Colombia	Paraguay
Costa Rica	Peru
Cuba	Philippine
Czechoslovakia	wealth
Denmark	Poland
Dominican Republic	Saudi Arabia
Ecuador	Syria
Egypt	Turkey
El Salvador	Ukraine, S.S.R.
Ethiopia	Union of South Africa
France	Union of Soviet Social-
Greece	ist Republics
Guatemala	United Kingdom
Haiti	United States
Honduras	Uruguay
India	Venezuela
Iran	Yugoslavia
Iraq	

The first new members to be admitted since the admission of Indonesia in 1950 were the following eighteen nations who became members in December 1955:

Albania	Italy
Austria	Jordan
Bulgaria	Laos
Cambodia	Libya
Ceylon	Nepal
Finland	Portugal
Hungary	Rumania
Irish Republic	Spain

On the occasion of those elections Outer Mongolia was vetoed by Nationalist China (which still represented China at the United Nations), and Japan was thereupon vetoed by Soviet Russia. But the admission of the further batch conceded that the only real principle of United Nations membership is "universality of membership."

**Major Organs of the United Nations.**—The United Nations have six major organs: (1) a General Assembly, (2) a Security Council, (3) an Economic and Social Council, (4) a Trusteeship Council, (5) an International Court of Justice, and (6) a Secretariat. It is especially the inclusion of the third body on this list (with all the Commissions and specialised agencies which stem from it) which makes UN more broad and balanced than the League of Nations.

**General Assembly.**—The General Assembly occupies a central position in the structure of the United Nations. But its business is quite distinct from the Security Council. It meets once a year. The Assembly can consider the general principles of co-operation for peace and security and disarmament and regulation of armaments. It can discuss any question concerning peace and security brought before it. It makes recommendations, but any question upon which action is necessary must be referred to the Security Council. The carrying out of its humanitarian work is the function of the new Economic and Social Council (dealt with below) which it elects and supervises. Further, the Assembly controls the purse. It also elects and supervises the Trusteeship Council and shares in the election of Judges for the International Court.

**The Security Council.**—The aims of the United Nations are wide—from feeding starving peoples to encouraging self-government in backward areas—but it cannot advance towards the noble objectives set out in the Preamble unless peace is maintained. The principal organ to preserve peace and security is the Security Council. It has eleven seats, of which five are permanently occupied by Great Britain, the U.S.A., the U.S.S.R., China, and France (which was officially recognised as one of the Great Powers at San Francisco). The other six are elected for two years by the General Assembly. Belgium, Persia, and Peru were elected for two years beginning January 1955; and at the end of 1955 Australia, Cuba, and Yugoslavia were elected. The Security Council sits continuously. It has two functions: (1) to promote the peaceful settlement of disputes and (2) to stop aggression. Under the Charter, parties to a dispute have already promised not to use force, and to settle their quarrels peaceably and to refer their dispute to the Security Council if they really cannot reach a peaceful settlement. On its side the Council can call on the parties to settle disputes peacefully, it can investigate any situation likely to cause a breach of the peace, and at any stage it can recommend a solution.

**The Veto.**—At this point we must deal with the veto, which applies to substantive questions. A decision needs only seven out of eleven votes. Five of the seven votes must be those of the permanent members, namely the United Kingdom, the U.S.A., U.S.S.R., China, and France. In other words if any one of them says "No" to the use of force, even after a full investigation, the Council cannot use force to settle the dispute. Thus when it comes to imposing sanctions for a breach of the peace the assent is required of the Great Powers, and one of them may of course be a party to the dispute. If the Great Powers imposed sanctions on each other it would mean a major war in which the present UN would disappear. Partly in order to overcome the difficulty of the veto the Assembly has set up a Committee to remain in permanent session consisting of one representative of each member. It is known as the Little Assembly, its formal title being the Interim Committee.

**The Economic and Social Council.**—The United Nations pledged themselves to a broad humanitarian policy of which the following are salient points: to promote higher standards of living; full employment; the conditions of economic and social progress; solutions of international economic, social, health, and other related problems; educational co-operation; universal respect for human rights; and the fundamental freedoms for all. The main business of the Economic and Social Council is to carry out this broad policy. To tackle these huge problems the Council established a number of important commissions and bodies, which fall mainly into the following three categories.

#### *Regional Economic Commissions*

Economic Commission for Europe (ECE)  
Economic Commission for Asia and the Far East (ECAFE)  
Economic Commission for Latin America (ECLA)

#### *Functional Commissions*

Technical Assistance Board (TAB)  
Transport and Communications  
Fiscal  
Statistics  
Population  
Social  
Human Rights  
Status of Women  
Narcotic Drugs

#### *Special Bodies*

UN Children's Fund (UNICEF)  
Commissioner for Refugees

#### *Specialised Agencies*

The Economic and Social Council also established relationship with the following specialised agencies, whose activities it co-ordinates:—

International Labour Organisation (ILO)  
Food and Agriculture Organisation (FAO)  
UN Educational, Scientific, and Cultural Organisation (UNESCO)  
International Civil Aviation Organisation (ICAO)  
International Bank for Reconstruction and Development (Bank)  
International Monetary Fund (Fund)  
Universal Postal Union (UPU)  
World Health Organisation (WHO)  
International Telecommunications Union (ITU)  
International Trade Organisation (ITO)  
World Meteorological Organisation (WMO)  
Inter-Governmental Maritime Consultative Organisation (IMCO) (in process of formation)

Several of these organisations were at work before UN was set up. One such body is the ILO whose work is described in the concluding paragraph of page 132.

**Economic Commission for Europe.**—ECE was the first of the great Regional Commissions to be set up under the auspices of the Economic and Social Council, and it was established in 1947 to facilitate concerted action for the reconstruction of Europe. The success of ECE has led to the establishment by the United Nations of similar Economic Commissions for Asia, for Latin America, and for the Far East (as described under "Outline of Asian Changes," p. 142).

**Food and Agricultural Organisation.**—We can here deal with only some of the specialised agencies. It has been a major concern of FAO to improve the world's food supply and to devise ways of preventing both shortages and surpluses of agricultural commodities. It has taken measures to control pests, infestation of stored grains and animal diseases. Rinderpest, the most serious of livestock diseases, kills over 2 million cattle annually in Africa, Asia, and the Far East. The organisation gives technical assistance to countries wherever such assistance can bring new land under cultivation, improve the yield of land already cultivated, raise levels of consumption or provide better living conditions in rural areas.

**The United Nations Educational, Scientific and Cultural Organisation** hopes to build peace and security by assisting in collaboration between nations through education, science, and culture in order to further universal respect for justice, for the rule of law, and for fundamental human rights. It is trying to wipe out illiteracy (which is far more prevalent in many areas than is commonly supposed) and to raise educational standards everywhere. UNESCO, because of its special concern for international understanding, has made suggestions for the teaching of geography and for improving text-books and teaching materials. From the beginning the organisation has endeavoured to mobilise social scientists all over the world for common action and has devised projects into, *inter alia*, the methods of political science and the methods which have developed in education, in psychology, and in philosophy for changing mental attitudes.

The World Health Organisation essays to eliminate three of the world's major diseases—malaria, tuberculosis, and venereal diseases. It has effectively controlled malaria in Italy and Greece, and greatly increased the production of DDT, which is effective in eradicating the carrier of malaria. The disease still kills about 3 million annually throughout the world out of the 300 million whom it strikes. Since malaria incapacitates millions of agricultural workers annually FAO collaborates with WHO to select those areas where control of the disease would result in increased food production. In the field of tuberculosis the organisation has undertaken mass immunisation. It is working to standardise the serological diagnosis of syphilis, to increase the production of penicillin, and to reduce the danger of infection for seafarers and prevent the spread of disease in ports.

The United Nations Children's Fund was established to meet the needs of children, particularly in the war-devastated countries, and to further child health purposes generally. The Fund, in its first six years, brought aid to millions of children and mothers all over the world. Its help is now being given to economically undeveloped countries to enable them to deal with long-standing child-health problems. UNICEF (which are the initials of the original Fund) is assisting the governments in mass campaigns to control tuberculosis, malaria, and yaws. Yaws is a contagious disease that affects children particularly, and in serious cases leaves them crippled. It can be cured by penicillin. The Fund is supported mainly by contributions by some sixty countries on a voluntary basis. Except in emergencies, the Fund's aid is matched in value by the government of the recipient country or by some voluntary agency in the benefiting country. In this way it draws out effort by the people of the assisted country.

**The Trusteeship Council.**—Like the Economic and Social Council, the Trusteeship Council is a subordinate organ under the authority of the General Assembly. The United Nations' plan is wider in its scope than the plan of the League of Nations. Under the Mandates system of the League, where the people of any territory taken from a defeated country were unable to stand by themselves, more advanced nations were mandated, as members of the League, to accept tutelage as a sacred trust. Ten Trusteeship Agreements have so far been approved by the General Assembly.

**The International Court of Justice.**—The new Court set up is very similar to that created by the League of Nations at the Hague and it meets there. The Court is the principal judicial organ of the United Nations and consists of fifteen judges elected by the General Assembly and the Security Council. No two of the judges may be nationals of the same State. The judges must be independent of national interests, and they declare solemnly in open court that they will exercise their powers impartially and conscientiously. Countries which are parties to the Statute of the Court can refer to it any case they wish. Among the disputes which have so far been submitted by states to the Court are the Corfu Channel Case (U.K. vs. Albania); Fisheries Case (U.K. vs. Norway); the Anglo-Iran Oil Company Case (U.K. vs. Iran); and the Channel Islands Case (U.K. vs. France).

**The Secretariat.**—The permanent headquarters are at New York. The present Secretary General is Mr. Dag Hammarskjöld, a Swede.

**What has UN accomplished?**—Early cases to come before the Security Council concerned the presence of troops of some of the Great Powers in Lebanon and Syria. The efforts of UN for conciliation in Indonesia were a major factor in the achievement of independence by that Republic. Following decisions of the General Assembly, the State of Israel was established, and mediation by UN ended armed conflict between

Israel and the Arab States. Fighting between India and Pakistan over Kashmir ceased after mediation by UN. The Berlin blockade in 1948 was settled by negotiations in which UN channels were used. And UN dealt with the disposal of the former Italian colonies. Perhaps the greatest achievement in 1953 was the establishment of the Technical Assistance Board (TAB) to supervise expanded technical assistance to undeveloped countries. This is described in the next paragraph.

But the other side of the picture needs to be faced. The UN has been hampered through its lack of success in achieving a solution of the major East-West issues. For example, little progress has been made in resolving basic differences on the control of atomic energy and the prohibition of atomic weapons and other weapons of mass destruction.

**Technical Assistance to Undeveloped Countries.**—One of the most important and novel of recent achievements has been the creation of a worldwide scheme for the sharing of skills and knowledge between nations. The scheme was envisaged as assistance by rich and well-equipped countries to under-developed countries. But in the event it seems that no country in the world is so completely underdeveloped that it has nothing to put into the pool. Thus a Yugoslav expert in shipbuilding worked in Ecuador; an educational expert in Ecuador helped in Bolivia; a Bolivian helped to combat disease in the Philippines; and so the chain continued. These projects make a vast array in many different technical fields; and in 1954 there were some 800 such projects. Among these were housing in Asia, irrigation in East Pakistan, maternal and child health services in Burma, civil aviation in Ethiopia. This work is carried out under the aegis of the Technical Assistance Board (TAB). A record programme of technical aid was planned for 1956.

**The Control of Armaments.**—To prevent a third world war in the long run, the UN must agree on a plan for the control and reduction of armaments. To help bring about a general regulation and reduction of armaments, the General Assembly in 1946 established an Atomic Energy Commission and the Security Council in 1947 established a Commission for Conventional Armaments. Unfortunately, there was soon a deadlock in both commissions. It proved impossible to secure agreement between the U.S. position and the U.S.S.R. position. The former, with the majority of members concurring, took the view that international control of atomic energy should precede the elimination of atomic weapons and that ownership and operation of atomic energy production facilities should be vested in an international control agency not subject to a veto in the Security Council. The U.S.S.R., on the other hand, took the view that there should be a simultaneous coming into force of conventions for: (a) the unconditional prohibition of atomic weapons, and (b) the international control of atomic energy; and that production facilities should remain in national hands, but subject to international inspection. A fresh Disarmament Commission was established in January 1952.

**Disarmament: The Next Step.**—At their Ninth Session in the autumn of 1954 the General Assembly of the United Nations unanimously agreed to fresh efforts to break the disarmament deadlock. Three main questions seemed linked together—disarmament, development of the peaceful uses of atomic energy, and the urgent need to speed the economic development of the poorer and less developed countries. The United Nations approved the proposal that the disarmament negotiations which had taken place in London in 1954 between five Powers, including Russia, should be resumed.

**Atomic Energy for Peaceful Purposes.**—In December 1953 President Eisenhower dwelt on the danger of atomic war to mankind, described the destructive power of atomic weapons, and proposed that those countries involved in the production of uranium and fissionable materials,

including the Soviet Union, should immediately begin to make joint contributions from their stockpiles to an International Energy Agency to be set up under the aegis of the United Nations. He hoped that the greatest of all destructive forces might be developed for the benefit of mankind by reversing the fearful trend of the application of atomic energy. His tentative plan was a world-wide investigation into the most effective peace-time use of fissionable material; and to diminish the potential destructive powers of the world's atomic stockpile. He hoped that all peoples would see that the great Powers (both East and West) are interested in human aspirations first and foremost.

**European Organisation for Nuclear Research.**—Meanwhile, so far back as July 1953, this European organisation had been created to provide at Geneva the first international laboratory for research in nuclear physics for peaceful purposes. The organisation was set up by Great Britain and eight European Powers, including Switzerland. The basic programme is to promote research on high-energy particles, including work in the field of cosmic rays. The Council first met in October 1954, when Sir Ben Lockspeiser, the British scientist, was elected President of the Council.

**The First Geneva Conference on Atomic Energy for Peaceful Purposes** was held in August 1955, and there were no less than 1,260 delegates and a host of observers from seventy-two countries. Over a thousand scientific papers were submitted, and exhibitions were held. Dr. Bhabha, F.R.S., of the Indian Atomic Energy Commission, presiding, predicted that unlimited power would be available to mankind within two decades, by which time, he said, "the energy problems of the world will have been solved for ever." It was announced that British scientists had built a reactor that made two atoms of new fuel for every atom consumed. France has renounced the manufacture of atomic and hydrogen bombs and is undertaking atomic research only for peaceful purposes. A Committee was formed by the British Government to study the effects of radiation.

#### Principal Organs of the United Nations

#### OUTLINE OF WESTERN EUROPEAN UNION.

Western Union was the name originally given to the association of western European powers who were associated in working the European Recovery Programme (described below). The Treaty of Brussels in 1948 between Great Britain, France, Belgium, Holland and Luxembourg formed a nucleus of Western Union, and from it sprang the Council of Europe (1949). The scope of the Treaty itself was widened by the North Atlantic Treaty (1949). Development has been upon three lines—economic, military and political—and the main stages of this threefold progress are described below.

**The European Recovery Programme.**—In 1947 Mr. Marshall, U.S. Secretary of State, invited the

European countries to draft a programme to put Europe on its feet economically. It was clear that early recovery from the war could not be attained unless Europe was assisted to obtain food and raw material from abroad. Mr. Marshall's speech was a call to Europe to unite to plan its own recovery. This was the Marshall Aid Scheme which led to the European Recovery Programme (ERP).

**The Committee of European Economic Co-operation.**—Europe quickly responded to Mr. Marshall's plan, although Russia and her satellites refused to join. In July 1947 sixteen nations agreed to set up a committee of European Co-operation. They were:—

Austria	Italy
Belgium	Luxembourg
Denmark	The Netherlands
Eire	Norway
France	Portugal
Great Britain	Sweden
Greece	Switzerland
Iceland	Turkey

and Western Germany (represented by Allied Zonal Governors).

**Proposals for Economic Co-operation.**—In April 1948 the Organisation for European Economic Co-operation (OEEC) was set up not only to administer American aid but also to bring about a permanently sound European economy.

**Marshall Aid.**—The plan initiated by General Marshall was very successful, and for some of the European countries Marshall Aid was continued until the end of 1951. By the end of 1950 Britain had sufficiently recovered to need no more Marshall Aid. Her share had equalled about £53 for each British household.

**The North Atlantic Treaty 1949.**—The founder members of this Pact (which widened the scope of the Brussels Treaty) were Great Britain, the United States, Canada, France, Holland, Belgium, and Luxembourg, and the nations which were invited by them to join were Norway, Iceland, Denmark, Italy, and Portugal. The parties agreed that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all and consequently they agreed that if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defence recognised by the Charter of the United Nations, will assist the party so attacked. The West German Republic was admitted to this organisation (NATO) under the Paris Agreements 1954 described below.

**The Political Aspect of Western Union.**—These were the economic and the military origins of a Western Union. There remained the political problem of uniting nations into a federation of other form of political grouping.

**Federal Union.**—This movement had, before the War, urged a federation of Europe as a first step in a progression towards a world federation. The Federalists advocated the surrender of absolute national sovereignty, a part of that sovereignty being vested in a federal authority. This authority should possess a government responsible to peoples and not to the States. It should have a Supreme Court to settle disputes between States which are members of the federation; and it must have an armed police force to uphold its decisions. The European Union of Federalists co-operated in the Hague Congress which was planned by the United Europe Movement.

**The Hague Congress, 1948.**—Several schools of thought were represented at the Congress, one main difference being between the federalists, who want to create a real federation in Europe, and those, like the United Europe Movement, who were not committed to a federation in so

far-reaching a sense. The Congress declared that the European nations must transfer some part of their sovereign rights so as to secure common action, and it demanded an early convening of a European Assembly chosen by the Parliaments of the participating nations. Following the Congress a co-ordinating European Movement was formed.

**The Creation of a Council of Europe.**—In January 1949 the Foreign Ministers of the countries who had signed the Brussels Treaty approved in principle the formation of a Council of Europe. In May 1949 the Foreign Ministers of the ten countries consisting of the five Brussels Treaty Powers and Denmark, Eire, Italy, Norway, and Sweden, concluded a formal Agreement called "The Statute of the Council of Europe." It set up a Committee of Ministers and of a Consultative Assembly, forming together a Council of Europe. The Council was established twelve months after the Hague Congress, almost to a day. The Committee of Ministers provides for the development of co-operation between governments, while the Consultative Assembly provides a means through which the aspirations of the European peoples may be expressed.

**Members of the Council of Europe.**—The original signatory Governments of the Statute were the ten countries referred to above. Greece and Turkey joined in 1949 and Iceland in 1950. The Federal Republic of Germany, an associate member in 1950, became a full member in May 1951. The Saar became an associate member in 1950.

The aim is to achieve a greater unity between its members for the purpose of safe-guarding and realising common ideals. The seat of the Council was fixed at Strasbourg.

**The Consultative Assembly.**—This the deliberative organ of the Council is empowered to debate and make recommendations upon any matter which: (i) is referred to it by the Committee of Ministers with a request for its opinion, or (ii) has been approved by the Committee. The Assembly consists of representatives of each member state appointed in such a manner as the government of that member shall decide. All resolutions of the Assembly require a two-thirds majority of the representatives casting a vote. The Assembly meets annually.

**Council of Europe.**—The Council came into existence in August 1949, and the Assembly opened at Strasbourg when M. Spaak (first President of UN General Assembly and Chairman of OEEC) was elected President. Mr. Churchill (as he then was) sat as an ordinary member. Procedure is a combination of British and Continental systems, but the design of the chamber follows the Continental pattern, delegates sitting at tables arranged to form a semicircle. In November 1949 the Council of Ministers agreed to meet the wishes of the Assembly that it would not in practice exercise its right of control to fix the agenda of the Assembly.

**Limitation of the Assembly's Powers.**—One group of representatives wished a complete change of the Assembly's powers in order to transform the present consultative and deliberative organisation into a legislative body. During the second session of the Assembly (in August 1950) a British delegate submitted a plan, which was not accepted, for a basic revision of the statute so as to give the Assembly a political authority endowed with limited functions but real powers.

**European Coal and Steel Community** provides for the co-ordination of coal and steel production in Germany, Belgium, France, Italy, Luxembourg and the Netherlands. The High Authority of the Community includes a consultative Committee of representatives of management, labour and consumers, an Assembly of Parliamentary delegates, a council of Ministers as a link to the Government, and a Court of Justice to settle disputes. The organisation of the Community is an example of co-operation on a supra-national

basis, since the governing authority is not responsible to the individual governments of member countries but only to the Community. The plan caused great discussion between the two opposing points of view within the European Movement: the Federalists and the Functionalists. The latter advocate integration by specific conventions, and the former aim at a European parliament and government. An attempt was made in 1953 to form a European Political Community. The intention was that, after ratification of the European Defence Community, a new Assembly elected by universal suffrage, should become the representative of both the Coal and the Defence Communities.

**Government of Germany after the War.**—As a result of Germany's unconditional surrender on June 5, 1945, all power in Germany was transferred to the Governments of the four principal Allies. By decisions at Potsdam in 1945 that power was exercised by the Commanders-in-Chief of the United States, the United Kingdom, the Soviet Union, and France, each being responsible in his own zone of occupation. On matters affecting Germany as a whole, the four would be jointly responsible as members of the Control Council. Berlin was divided into four sectors of occupation. Local elections took place in all four zones in 1946, and new constitutions were formed.

**The London Conference 1947** of the four Foreign Ministers concerned failed to agree on a joint German settlement. Unfortunately, the effect was to set in motion political and economic developments which were speedily to make Germany the battleground of the conflict of ideas between Soviet Russia and the Western Powers. The Allied Control Council could no longer function efficiently; and by the end of 1948 four-Power rule had virtually collapsed and the partition of Germany was complete. A federal Parliament and Government were formed in Western Germany. The Soviet zone prepared a rival form of Government for East Germany.

**The Federal Republic of Germany** was officially proclaimed at Bonn on May 23, 1949, and was the first democratic State to arise in Germany since the fall of the Weimar Republic. It comprised two-thirds of the population and about one-half the territory of the former German Reich. Its population was about 45 millions.

**Eastern Germany**—A month after the opening of the German Federal Parliament at Bonn, the U.S.S.R. announced the establishment of a German Democratic Republic at Berlin. Two bodies were set up with Soviet encouragement, the German People's Congress and the People's Council, to foster a form of German unification. During the spring of 1951 the Foreign Ministers' Deputies met in Paris; but they dispersed three months later without even reaching agreement on an agenda. In March 1952 the Soviet Union proposed that the occupying Powers should consider the formation of an all-German Government. The subject was discussed by the Four-Power Conference in Berlin in 1954 without result.

**Western Germany's New Status.**—In May 1952 the German problem acquired a new complexion, when the so-called "Contractual Agreements" were signed by the three Allied Powers and Western Germany at Bonn. These Agreements did not form a Peace Treaty, but they attempted to define how W. Germany and the three Allied Governments should work together. Sovereignty was to be restored to Germany and she was to enter a military alliance with France. Indeed, a Treaty called the European Defence Treaty was drawn up between the four Powers, with Italy and the Benelux countries, which was to fit German Armed Forces into a Western European system. But this system, called the European Defence Community, never came to fruition as such, owing to the refusal of France to ratify the Treaty in 1954.

The European Defence Community—EDC, which, as stated in the preceding paragraph, would have fitted W. Germany into the W. European Security system, was defined as a community "of supra-national character with common institutions, common Armed Forces, and a common budget." The members, France, Italy, Belgium, the Netherlands and Luxembourg, and W. Germany, were to be bound to mutual assistance in the event of attack; and it was intended that they should contribute national contingents of divisional size to a common pool. This arrangement had not been confirmed when the question of Germany was discussed with Russia at the Berlin Conference in January 1954. But the German question was not solved with Russia at Berlin, and EDC remained for ratification. When, after over two years from the inception of the Bonn Agreements, France was called upon to ratify the European Defence Treaty, she declined. Sir Anthony Eden toured the European capitals to see how he could restore the edifice which had collapsed, and he summoned all concerned to a meeting in London.

Brussels Treaty Organisation), which came into being on May 5, 1955. On that date the Occupation Statute was revoked and the Allied High Commission for Germany was abolished.

The Warsaw Conference.—Only six days after this date, when the London and Paris Agreements took effect, the Soviet Union and seven other countries (Poland, Czechoslovakia, Eastern Germany, Hungary, Rumania, Bulgaria, and Albania) signed a twenty-year treaty of friendship, co-operation, and mutual assistance. It also provided for a unified military command for the armed forces of these countries, except of Eastern Germany, whose participation was to be examined later.

The "Summit" Conference, Geneva, 1955.—In July 1955 the long-hoped-for meeting of the Heads of Governments was held, between President Eisenhower, Sir Anthony Eden, M. Faure, and Marshal Bulganin. The atmosphere was conciliatory and hopeful, and after six days the Con-

The London Nine Power Conference and the Paris Agreements 1954.—Thus in the autumn of 1954 representatives of nine Powers met in London and began their search for a substitute for EDC. They were Belgium, Canada, France, the German Federal Republic, Italy, Luxembourg, Netherlands, United Kingdom, and the U.S.A. The Conference dealt with the issues facing the Western world: security and European integration in a framework of a developing Atlantic Community. It also considered how to assure full association of the German Federal Republic with the West and the German defence contribution. All the decisions which were reached formed part of one general settlement and these were embodied in agreements signed shortly afterwards in Paris. These decisions were:

1. That the occupation of W. Germany by Great Britain, the U.S.A. and France should end.
2. That the German Federal Republic and Italy should join the Brussels Treaty Organisation. At the same time the German Federal Republic undertook not to manufacture any atomic, biological, or chemical weapons—called the ABC arms. It was agreed that within the Brussels Treaty Organisation an agency should be established to control the armaments of continental members of the Organisation.
3. Great Britain pledged herself to maintain on the continent four divisions and a tactical air force.
4. The W. German Republic was admitted to the North Atlantic Treaty Organisation (NATO).
5. The W. German Republic pledged herself to conduct her policy in accordance with the principles of the United Nations; and never to have recourse to force to achieve reunification of Germany.

Entry into Force of London and Paris Agreements.—These agreements took effect on May 5, 1955, on which date the occupation regime in Western Germany was ended and the German Federal Republic attained full sovereignty and independence. At the same time the Federal Republic became a member of NATO and also of the Western European Union (the expanded

ference instructed the Foreign Ministers of the four countries to meet in October and to propose effective means for the solution of: (1) European security and German reunification; (2) Disarmament; (3) Contacts between East and West. The Conference formulated general directives for guidance at the meeting of Foreign Ministers which they had ordered.

The Eden Plan was the name given to the steps suggested by Sir Anthony Eden at the Summit Conference for German reunification and the conclusion of a freely negotiated peace treaty with a united Germany. He contemplated five stages: (1) free elections throughout Germany; (2) convocation of a National Assembly based on those elections; (3) drafting of a Constitution and preparation of peace treaty negotiations; (4) formation of a German Government responsible for negotiation and conclusion of peace treaty; (5) signature and entry into force of peace treaty.

The Geneva Conference of Foreign Ministers, 1955.—But after three weeks discussion this sub-sequential Conference found it impossible to reconcile the Western and Soviet viewpoints on any of the three subjects on their Agenda. On Germany the Western Foreign Ministers made a proposal for reunification of Germany by free elections in 1956 and for a Treaty of Assurance giving the Soviet Union far-reaching safeguards against aggression when Germany was reunified. The Soviet proposals, which made no mention of all-German elections or eventual reunification of Germany, provided for: (a) a collective European security treaty with the United States as a member and the People's Republic of China as observer, and (b) the dissolution of NATO, the West European Union, and the Warsaw Treaty organisation (described above) after an interim period following the coming into force of the European security treaty. A bridge between these two sets of proposals could not be found. On Disarmament likewise progress could not be made. The Western proposals included a plan for the exchange of military blueprints and aerial inspection as proposed by President Eisenhower. The Russians asked for reduction of the forces of the United States, China, and of their own Union to a level

between one and one and a half million and of Great Britain and France to 650,000. The Western Powers put forward seventeen points on contacts, including freer exchange of information, censorship, jamming, and private tourism. The Russians laid emphasis on removal of obstacles to trade. In the event no agreement was reached on this third topic. In their final communiqué the four Powers did at least reaffirm the obligation of their Governments to refrain from the use of force in any manner inconsistent with the United Nations Charter.

### OUTLINE OF ASIAN CHANGES.

**Changing Scene in South Asia.**—The situation in Asia has been transformed since the Second World War. India achieved its independence in 1947 and was partitioned into two countries, India and Pakistan. They both chose, of their own free will, to remain within the Commonwealth. Thus, as free members of the Commonwealth, India and Pakistan decide their policies in full sovereign independence. Within a few months of India's independence Britain also ended its responsibilities in Burma and Ceylon; and Burma—but not Ceylon—left the Commonwealth altogether. The Dutch East Indies were free by the end of 1949; and the French Empire in Indo-China, after bringing the world very near to war, is in liquidation. Asia is therefore free of external rule, except for a few pockets. Thus the whole scene in South Asia has changed.

**Steps to Regional Unity.**—An impulse arose among the new Asian states, fostered by India, to form an Asian Union. The lead towards co-operation was taken by India, which had the greatest prestige and which believed in an Asian Union. A conference of 28 Asian delegates held at Delhi in March 1947 failed, however, to create an Asian Union. But the efforts to strengthen community of outlook were not abandoned but taken up later over a more limited field.

**Colombo Conference.**—Thus, in 1954, Sir John Kotelawala, the Prime Minister of Ceylon, summoned a conference of Burma, Ceylon, India, Indonesia, and Pakistan on the line to be taken towards the Geneva Conference on Indo-China; and India, although not a member of that Conference, played a notable part in arranging the settlement on Indo-China. The Conference affirmed the faith of the five countries in democracy. They also reached agreement on a number of subjects, including the importance of controlling the hydrogen bomb and other weapons of mass destruction; the desirability of China being represented in the United Nations by the People's Republic. The United Nations has provided the opportunity for those Asian nations who are members of it to concert their policy. Among the subjects on which they have co-operated is the treatment of nationals of Indian origin in the Union of South Africa.

**South East Asia Treaty Organisation (SEATO).**—An entirely different kind of regional co-ordination has been initiated by the United States. This is an effort to promote regional security in the face of what is held by the United States to be a peril to South Asia from China and Russia. In September 1954, therefore, the United States summoned the Manila Conference; but only the Philippines, Thailand, and Pakistan agreed to attend. In spite of India's refusal to attend, SEATO was brought into being. The Treaty was a pact against Communist aggression in a defined area, which does not, however, include South Korea and Formosa. The countries which participated in the Treaty, besides the three Asian powers mentioned above, were the U.S.A., Great Britain, Australia, New Zealand, and France. The organisation has been described as a somewhat shadowy and unsubstantial one.

**The Colombo Plan.**—This is a plan for economic co-operation which has been much discussed and is inviting wide notice. It was started in 1950 as a venture of the British Commonwealth to

promote the economic advance of Commonwealth countries in Asia. Its scope soon widened and includes most of the countries of South Asia. The object was to enable the countries to help each other to devise plans for their economic development. Thus there is not really one plan but a bundle of individual plans. In preparing these there has been mutual consultation and help and pooling of the assistance given by Western experts brought to Asia. Arrangements have been made for sending Asians abroad for training. A prime object of the plan is to stimulate the flow from the West of capital which had dwindled after the War; and thereby to promote the economic stability of the region. All the loans are made without political conditions. Within three years India's food production increased by a fifth, and industrial production rose by one-third. Unfortunately during those three years the contrast between the standard of living in Asia and the West has increased rather than lessened. The need for technicians in Asia is greater than ever.

**The United Nations Economic Commission for Asia and the Far East (ECAFE).**—We have seen, in the preceding paragraphs, the various patterns which have been drawn of co-operation: an attempt at regional unity; co-operation between Asian Powers at the United Nations; SEATO; and the Colombo Plan. Another grouping is ECAFE—a short title formed from the initials of the body named in the title of this paragraph. This is one of the three regional economic commissions of the United Nations, the other two being the Economic Commission for Europe (ECE) (described in the "Outline of the United Nations" on p. 137) and the Economic Commission for Latin America (ECLA). The job of ECAFE is to help the countries of the region to act together for the development of their economies, to produce more goods and to increase trade both within the region and with the rest of the world. It has been called an economic Parliament for Asia, in an advisory sense. There are fifteen members, and these include Russia, the United Kingdom, and the U.S.A. There are also nine associate members which are territories in the area but are not members of the United Nations. A rather strange feature of ECAFE is that in its membership—as distinct from associate membership—there are just about as many countries outside the region as inside. This is because outside countries were eligible for membership if they had interests in the region; and this brought in countries like Australia, the United Kingdom, the U.S.A., and France.

**The Bandung Conference of Asian and African countries** was held at the town of that name in Indonesia in April 1955. It was the first inter-continental conference of the so-called coloured peoples in the history of mankind, and it represented more than half the population of the entire world. It was organised by the five Colombo Powers—India, Pakistan, Ceylon, Indonesia, and Burma—and it was attended by all the twenty-five countries invited except the Central African Federation. These countries (in addition to the sponsor countries) included China, Egypt, Ethiopia, Japan, Libya, Persia, Siam, Sudan, and Vietnam. The President of Indonesia, who opened the Conference, said that it "must inject a voice of reason into world affairs where others depend on power politics and jet bombers." Sir John Kotelawala (Ceylon) said that none of the Asian or African countries manufacture nuclear weapons.

**Results of the Bandung Conference.**—The members of the conference decided to provide technical assistance to each other and to promote joint ventures. They emphasised the particular significance to Asian and African countries of the development of nuclear energy for peaceful purposes. They recalled that Asia and Africa were the cradle of great religions and civilisations and urged that colonialism suppressed the natural cultures of peoples. Giving their support for the fundamental principles of human rights, as set out in the United Nations Charter, they deplored

policies leading to racial segregation and discrimination. They appealed to the Security Council of the United Nations to support the admission of all those States qualified by membership in terms of the Charter; and these comprised Ceylon, Japan, Jordan, Libya, Vietnam, with others. Finally, they affirmed that freedom and peace were interdependent and that the right of self-determination must be enjoyed by all peoples.

**The Baghdad Pact.**—The story of Asian events would not be complete without a note of the Baghdad Pact. The original Defence Pact was between Turkey and Iraq, and three other countries joined at successive dates in 1955, first the United Kingdom and then Pakistan and Persia. The first meeting of the Pact Council was held in Baghdad on November 21, 1955, the United States maintaining liaison.

### HOW TO COLLECT MATERIAL.

The Springs of Curiosity may be aroused in many ways. To ascertain the facts of a problem your two best courses are to go to the local public library or write to the Society interested in the particular subject. (List of Societies will be found on pp.147-48.) The National Book League offers lists of books on any given subject.

**Classification of Books.**—All libraries are classified to facilitate reference, but the favourite system is the Dewey Decimal System, which divides the whole field of knowledge into ten Main Classes: General Works; Philosophy; Religion; Sociology; Philology; Natural Science; Useful Arts and Applied Science; Fine Arts; Literature; History (including geography and travel and biography). Each of these Main Classes is again subdivided into ten main divisions.

Let us take an example. The main class of Sociology receives the number 300. This range 300 to 400 (the next main class) is graduated into tens, and Economics is 330. The range 330 to 340 is again graduated, and the subject of Labour and Capital is 331. This process is carried on by decimals so that 331.2 deals with Remuneration for Work, 331.22 with Wage Scales, and 331.225 with Extra Pay.

**Library Services in the Rural Areas.**—In most villages there is a "county library centre" to which collections of books are sent by the County Library. In Great Britain there are 24,000 centres of this kind in village clubs, halls, shops, schools, and even homes. In some counties there is a library van or the bibliobus, as it has been called by a French writer. This travelling library tours on a pre-arranged time-table so that everyone knows exactly when it will arrive.

The British Museum Reading Room contains original sources, books, and periodicals which cannot be found elsewhere. Because of necessarily limited accommodation the use of the room is restricted to those who require a wider range of books on the subject of their study than can be found in other libraries. Those who desire to be admitted to the Reading Room must apply in writing to The Director, British Museum, London, W.C.1.

**Special Libraries.**—Four of the best special libraries in the world are open to the public in London. They are:—

1. The Library of the National History Museum (for zoology, geology, and related subjects).
2. The Library of the Science Museum (all branches of science and technology, except medicine).
3. The Patent Office Library.
4. The Library of the Victoria and Albert Museum, which is the national art library containing volumes and photographs on all aspects of fine, applied, and decorative art.

Full details of the large number of specialist libraries in London (including that of the British Library of Political and Economic Science, one of the best collections in the world on this subject, at the London School of Economics) will be found in *The Student's Guide to the Libraries of London*, by R. A. Rye, published by the University of London Press and *The Libraries of Greater London*, by I. M. Harrod, published by G. Bell. Many of the societies described in the "List of Societies" have libraries on special subjects. This is true, for example, of the United National Association, the British Drama League, and the Howard League for Penal Reform.

**How to Use Books.**—Do not be discouraged by the belief that a book must be read through completely. To the question "What, have you not read it through?" Dr. Johnson replied, "No, Sir; do you read books *through*?" There may be books which you will wish to study completely. But if you are gathering information do not hesitate to use them so as to obtain just what you want at the moment. At the end of the book there is nearly always an index which is an alphabetical guide to the topics dealt with. Sometimes also there is a detailed synopsis at the beginning of each chapter. Sometimes again the headline on the right-hand page refers to the principal subject dealt with on that page. Treatises often have headings to the paragraphs. Many books and pamphlets give a bibliography, which is a list of recommended books on the subject of the book and related aspects.

**Note-taking.**—You will find it very useful to make your notes, whether from reading material or from talks and lectures, on cards or slips of paper of uniform size. This will enable you to add to them so as to maintain a logical sequence, to reshuffle them according to your needs, and to weed out notes no longer needed. They will be serviceable if you are writing upon the subject. The uniform size of the notes will be specially convenient when making a speech (see "Hints for Speakers"). Taking good notes of a lecture requires practice. For if you want to keep a note you must listen, select, and write all at the same time. To do this well you must not only grasp the meaning but be able to seize the cardinal points which, being noted down, make up the logical skeleton of the talk. Practise taking a note when listening to a wireless talk.

**Study by Post.**—Those who live away from towns and libraries can study a wide range of subjects by correspondence. Among the organisations which offer facilities are:

The British Drama League,  
National Adult School Union,  
National Federation of Young Farmers' Clubs,

whose addresses will be found in the List of Societies and the

National Co-operative Educational Association, Stanford Hall, Loughboro', Leicestershire.

National Council of Labour Colleges, Tillinacree, Scotland.  
Ruskin College, Oxford.  
Workers Education T.U. Committee, 27 Portman Square, W.1.

Hillcroft College, South Bank, Surbiton, Surrey, caters specially for women. Those at sea in the British Merchant Navy and fishing fleets can engage in correspondence on all general subjects through the Seafarers Education Service, Mansbridge House, 207 Balham High Road, S.W.17. This college of the sea also provides and changes libraries for ships.

### THE WAY TO CONDUCT A MEETING.

A Chairman is necessary for the orderly conduct of a meeting. By a grasp of the main rules of procedure and by a wise attitude, a chairman can

make a meeting—whether large or small, formal or less formal—an agreeable and efficient affair instead of the tedious experience it so often proves.

The following outline is intended to give the necessary knowledge on which to base firm and quick rulings when taking the chair at a meeting. Such knowledge will give confidence. Other qualities are needed too. These are dealt with in concluding paragraphs which deal with hints to chairmen, followed by a special section of advice to speakers. The outline is also intended to be of equal use to all who attend meetings.

**Rules of Debate.**—There is, of course, no legal code of rules which apply to all meetings, but there is a body of customs and practices (called "the Rules of Debate") in general use. Your society or organisation may have prescribed a set of rules, and these "Standing Orders" govern your meetings. You will need to study them, whether you are the chairman or only a member, for they are binding and this outline of the customary procedure will help you to understand them.

The chief debating council in the country is the House of Commons, and the set of rules which it has devised as a result of its centuries of experience are called "Rules of Procedure." Although intended for the House they have formed the model on which, with necessary variation to suit peculiar needs, most rules of procedure have been based.

When a point of order dealing with procedure is raised in debate it must have regard either to standing orders (if such exist for the organisation) or, in their absence, to the customary rules of debate referred to above.

**Agenda.**—The Notice of Meeting is issued by the Secretary, and it should state the items of business to come before the meeting. This list of items is called the Agenda. It is a good step for the chairman to read the Agenda at the opening of the meeting so that any omission can be repaired. As a further safeguard against omission it is best to make a final item "Any other business."

**Minutes.**—Since the Secretary has also to prepare the minutes we might deal with that subject before dealing with the conduct of the meeting itself. The record of a meeting is called the Minutes. The Minutes should record the date and place of the meeting of the Council or Committee and the names of the members present, and should be a concise statement of the decisions taken. It should record the motions submitted, any amendments considered, and the resolutions. The extent to which the points of the discussion are recorded depend upon the practice of the Council or Committee concerned. In any event the minutes should be a clear factual statement of the business transacted. Minutes need to be approved as being a correct and complete statement by the subsequent meeting of the body; and when so approved they are signed by the Chairman. "Approval of Minutes of the last meeting" therefore appears as the first item of the Agenda of a meeting followed by "Business arising out of the last meeting." It is necessary for a Secretary to take a complete note of the business of a meeting so that he can prepare the minutes, and it is usual and advisable for the Secretary to submit to the Chairman his draft of the minutes directly he has written them.

**Quorum.**—This Latin word is used to mean the number which must be present to make the proceedings valid. If a quorum were not present the meeting would not be representative. Every society prescribes what the quorum for its meetings shall be. The quorum for Public Authorities and public companies is fixed by law.

The actual number necessary varies with the kind of meeting, but voluntary societies, say, a football club or allotment holders' society, should fix its quorum for its executive committee. It can be either an actual number or a proportion (which should not be less than one third). This avoids dispute as to whether the decision was taken by a representative meeting. If at any

time after the commencement of business a quorum is not present the meeting should be adjourned.

When you are to chair a meeting go to the meeting early, take the chair promptly and make sure that the necessary quorum is present. You may change the order of business as shown on the Agenda if you explain the reason to the meeting.

**Motions.**—A motion is any proposal, idea, or suggestion properly submitted at a meeting for consideration and adoption.

Notice of motion must be given in the manner prescribed by the rules. A motion must begin with the word "That" and must declare something which it is hoped will be the will of the meeting. The wording should be concise and clear. The person submitting the motion is called the proposer or mover. If the decision is important the motion should be written out. But if it is not written out, the text as taken down by the Secretary should be read out by him, and the Chairman should ask the mover if it is exactly as he intends. The Chairman then asks if it is seconded. A speaker must rise in his place and address the chair. If the motion is not seconded it lapses. If it is seconded it is put to the meeting for debate. The Chairman "states" the question thus: "The question is (*reads the words of the motion*)."

The motion cannot then, without the consent of the majority, be withdrawn, altered, or amended.

**Debating a Motion.**—When the second member who supports the proposal announces "I support the motion" he may speak then in support of the motion or he may reserve his speech for the debate.

As chairman you should allow a member who wants to oppose the motion to speak next, and try to arrange that speakers for and against alternate. This makes the debate more interesting. The speaker whom you first see rising in his place to speak (that is, the one who "catches the Speaker's eye") speaks. Speakers may only address the meeting once on a motion, except the mover of the motion who has the right of reply. Standing orders may impose a limit on length of speeches. The general principle is, the shorter the speech the better, consistent with adequate advocacy. There is no restriction in the Standing Orders of the House of Commons, but all public bodies, including the L.C.C., T.U.C., Co-operative Congress and the I.L.O., have limits on length of speeches. There is sometimes extension by consent.

**Putting the Question.**—When the subject has been ventilated the mover is given an opportunity to reply, and the Chairman then "puts" the question. He says "The question is (*reads the motion*). Are you in favour?" Those in favour then vote by holding up one hand, and these are counted by the Chairman (the Secretary assisting). The Chairman then says "All those against please show." There is a similar counting of hands. The Chairman announces "The motion is carried" if the majority are in favour; contrariwise he declares it lost.

**Voting by show of hands** is the ordinary practice on all but exceptional occasions. The Chairman should be careful if the vote is taken by voice, and vote by hands can be demanded by a member. Sometimes a motion is so acceptable that no voting is necessary, but a vote must be taken if there is any dissent. In large meetings it is usually necessary to appoint members as tellers to count the votes. One is chosen from those who intend to vote in favour and a second from those intending to vote against the motion. These together count the voters and hand the results to the Chairman in writing.

**Resolutions.**—A motion which is carried is thereafter called a resolution. The difference between a motion (which is what is proposed) and a resolution (which is what the meeting adopts as its decision) must be clearly kept. The terms are not interchangeable.

When a motion is rejected, no motion to the same effect can be brought forward at the same meeting. There are generally safeguards in standing orders in regard to rescinding resolutions by requiring specified notice of motion for any rescinding or requiring a special meeting for doing this. The L.C.C. requires twelve months to elapse before a notice of motion to rescind a resolution can be entertained unless such notice is backed by twenty members.

**Amendments.**—But we have not considered what happens when someone wants to alter or improve a motion, in other words to amend a motion. An amendment is a motion which seeks to alter or improve the original motion. Having studied the routine when there are no amendments, let us pass on to study the different kinds of amendments and how they are dealt with.

These must be directly concerned with the subject of the original motion and they can be put into four groups:—

- (1) to insert words in the original motion;
- (2) to delete certain words from the motion;
- (3) to delete certain words and insert certain other words; and
- (4) to delete the whole or practically the whole of the motion and insert other words dealing with the same subject.

An amendment, being a motion, needs to be moved, seconded, and discussed just as we have described for a motion except that a mover of an amendment cannot reply to the debate on his amendment. The mover and seconder of the amendment must not have spoken on the motion, but any member who has spoken on the original motion may speak in the debate on the amendment.

Although several amendments may be moved on the same original motion, they must be taken one at a time, in the order in which they affect the words of the motion beginning at the first word. If an amendment to a later part of an original motion is accepted, an amendment to an earlier part cannot be afterwards considered.

When an amendment is moved, the issue which it raises becomes the first question to be disposed of. If the amendment is carried, the original motion disappears and the amendment becomes the amended or substantive motion and still further amendments may be moved to it.

When the Chairman takes the vote on the amendment he should be clear that he is seeking a decision on the amendment. He should not say "Are you in favour of amendment or original motion?" but "Those in favour of the amendment?" and "Those not in favour of amendment?" If the amendment is carried it is the survivor; if it loses, the ground is clear and the original motion must be put to the meeting. In other words if the amendment is carried the original motion is killed; but if the amendment is lost the original motion comes back into the picture.

An amendment to add words is sometimes called an addendum.

**How Debates are Closed.**—If strong feelings are aroused by a debate it may be difficult for the Chairman to close the debate at his own choice, since he may be held to be favouring one side or the other. It will be better therefore to wait a motion from the body. The ordinary form is "That the question be now put" and can be moved only by those who have not taken part in the debate (otherwise the device would be open to the abuse of preventing others speaking). Motions may propose that the subject be postponed indefinitely (*sine die*) or until a specified date.

Another form of closure is a motion "to proceed to the next business." If carried, no vote is taken on the main subject. If lost, the debate continues.

Another form is a motion for adjournment of meeting.

**"The Previous Question."**—An old and curious motion for closing a debate is one called "The Previous Question." This procedure is best understood by understanding the historic title. It suggests a prior question: Shall we vote or

not vote on the motion? In other words it raises a question previous to the main question, and this previous question is to vote or not to vote.

The "Previous Question" is always put in the form "That the question be now put," and if it is carried, the main question is shelved. If lost, the main question is voted upon. *Thus once Previous Question is accepted by the Chairman it must close the debate whichever way the vote goes upon it.* The Chairman can best keep the two questions clear by referring to the Previous Question as "this motion" and the original question as "that motion." So he takes a vote on "That that question be now put."

The Previous Question cannot be moved when an amendment is actually under discussion. But it can be moved notwithstanding that a number of amendments on the Agenda have not been moved. It will be for the Chairman to determine whether to accept the motion of Previous Question after being moved and seconded.

**A Committee** is a body to whom any subject has been referred or committed, and the House of Commons and large public bodies and societies have committees. They may be *standing committees* which, as their name indicates, have a permanent existence. Thus the municipal bodies have standing committees on finance, general purposes, electricity, education, etc. Or a committee may be a *special committee* to deal with a specific subject which may be too complex for the general body of members to deal with. (In the House of Commons such a Committee is called a *Select Committee*.) A *Joint Committee* is one created by more than one body to deal with a common problem. Thus the Trades Union Congress has a Joint Committee with the British Medical Association. Such a Joint Committee may be Standing or Special. An *ad hoc Committee* is one formed for a particular purpose.

A Standing Committee may be given the executive power to take decisions and conduct business within a specified scope for the parent body; or it may be required only to give the parent body advice.

The procedure for committees follows in general that for ordinary meetings, but more latitude is allowed. A general discussion usually takes place before a motion is crystallised, and when motions are framed they do not need to be seconded. The debate is more informal and speakers remain seated, speaking as often as the Chairman allows.

**Disorder.**—Good order is essential for consideration of business, and it is the first job of the Chairman to maintain it. Although a Chairman needs to be firm and impartial, tact and conciliation go a long way to create harmony. He should be able to take prompt decisions on procedure; but he can ask for time to consult authorities if necessary in an emergency.

But, if disorder does occur, the Chairman names the member, who must withdraw. If the disorder should be on such a scale that the Chairman thinks he should adjourn the meeting, he can do so on his own decision, without anyone moving adjournment. A member who refuses to withdraw offensive remarks is guilty of disorderly conduct.

**Points of Order.**—These are matters which, while acting as a safety-valve for members, are often an irritation for the Chairman, especially because these points are often not points of order at all. A point of order must deal with the conduct or procedure of the meeting. It must show that a speaker is wandering from the scope of the subject or is using unparliamentary language or is breaking a rule of the society or the customary rules of debate. But interjectors often break in with points which are not on these aspects, and the Chairman must be firm with those who interrupt. A speaker may not be corrected under cover of a so-called point of order. A speaker may, with the Chairman's permission, make an explanation on a matter on which there has been genuine misunderstanding, but he must not be controversial.

**Hints for Chairmen.**—Some hints have been sprinkled in the foregoing outline. A Chairman

needs to follow closely everything that is said, to check irrelevance and undue repetition, and to give rulings on questions of order. He must be absolutely impartial, being neither weak nor autocratic. He has the power to give a casting vote if members are equally divided for and against. Generally the voting powers of a Chairman are covered by the organisation's Standing Orders.

But besides maintaining order and ensuring correct procedure a Chairman can perform an even greater service if he can evoke the best thought and counsel from those who have come together to deliberate. If he can foster an atmosphere of co-operation and goodwill he will have created the best chance for fruitful debate and business.

**Hints for Speakers.**—However good the Chairman, the efficacy of a meeting turns largely upon the speakers. So much so, that we devote a special section to assisting speakers in the art of speaking, and another section is devoted to advice on gathering material for speeches.

**Books Recommended.**—Lord Citrine's book *The ABC of Chairmanship* (published by the National Council of Labour Colleges) should be consulted. It is an invaluable and readable guide. There are also *How to Chair* by John Rigg (Allen and Unwin) and *The Chairman's Handbook* by Sir Reginald Palgrave (Dent).

### HINTS FOR SPEAKERS.

These hints are intended to help those who, for whatever reason, need to speak in public or to give instruction to a class or group. The art of rhetoric, so valued in classical times, has been neglected in England since the eighteenth century, and oratory has declined.

**Preparation.**—Digest well beforehand what you are going to say. Plan the sequence of the main points and write them down as the headings of your address. Enable the audience to see clearly this sequence of themes. This will help you considerably and them, too. Such a course breaks the talk down to manageable sections. If he knows the logical sequence of the talk the hearer's interest is sustained. Moreover, he is thus freed to concentrate on the elaboration of a main point and absorb the detail which clusters round it. This advice has been put in the well-known words: "Tell an audience what you are going to say; then say it; and finally tell them what you have said." This advice is intended to emphasise the need to make the outline clear rather than to be taken literally as practical advice. If it is adopted literally you will need to make the beginning and end very brief.

The headings should be written clearly on cards or paper which you can hold in your hands while speaking. The fact that you can refer to your notes and can read them easily will give you confidence. Don't hesitate to refer to your notes, especially because a pause may be all to the good. Incidentally to have something to hold will help you to solve the problem which besets many speakers of what to do with the hands.

If you bear in mind the general background of the audience you will be able to use analogies and examples which are within their experience and thus make your speech more effective.

**Delivery.**—You may be nervous before speaking. So was Gladstone. So indeed are most speakers, even those who have acquired experience and may be regarded as "good speakers." It is little use telling someone who is nervous not to be nervous, any more than it is useful to tell someone with toothache not to think about it. But these notes will help you to have confidence which, in turn, will dissolve nervousness.

Start slowly. This will give you and your audience time to get on terms with each other. It will enable you to judge how to pitch your voice so as to be heard easily by all. Moreover, a deliberate and friendly start will give you a mental foothold from which to embark on more emphatic passages.

If you stand straight with your shoulders back it will help you to be confident and to produce your voice clearly. You will find that a smiling expression will add resonance to your voice.

Even when well launched upon your discourse don't speak too quickly and don't be afraid to pause. A well-chosen pause has many advantages. It helps to clarify the structure of your talk. The pause is in itself a rest to the audience, especially as you are likely to begin again on a different tempo and note in the musical scale. Furthermore, a pause will enable you to adjust your matter to the clock—and speakers err on the side of prolixity rather than brevity.

Speaking, like writing, is a form of communication. You must therefore be quite clear as to the message you want to communicate. Be simple and, above all, sincere. Sympathy, if not a sense of humour, should prevent you from boring the audience.

**Control.**—This advice presupposes an effective control. Good public speech calls for two different but complementary qualities, a flow of spontaneous feeling and, at the same time, control so that the speaker may shape and steer this flow of expression. Just as a car needs not only an accelerator but also steering-gear and brakes, so two functions of the personality need to operate together—motive power and effective control. It will be for each to solve for himself how to harmonise these two aspects of the personality—the dynamic flow upon which a speaker can launch persuasive appeals and convincing statements and on the other vigilance and careful control. Some speakers may feel the need to strengthen their controls; others may consider that it is their enthusiasm which needs kindling.

**Ending.**—Give particular care to the way you are going to end. The first sentence of a wireless talk is an important and difficult sentence to frame. But for a visible audience it is the last passage which should be framed beforehand, however spontaneous the rest of the speech. In those last sentences you have an opportunity of summing up in an effectual way the pith of what you have said. Moreover, some speakers go on speaking unnecessarily rather like guests who do not know how to depart with politeness. Prolixity tends to neutralise the effect they are trying to produce. If, however, the phrases with which to end were already in their minds speakers would be able more easily to round off their address with a decisive and effectual end.

**Interruptions.**—Since it is our object to reassure the beginner it seems scarcely consonant with that aim even to whisper a word about the possibility of interrupters. But although not an extinct race, interrupters are not common, and there is a golden rule in regard to them—remain courteous and calm. We have all relished the classical retorts of great politicians, but it is best for ordinary mortals not to try to emulate them. Maintain courtesy therefore in the face of any discourtesy. You will thereby retain the goodwill and sympathy of your audience. You will naturally be equally courteous to questioners, who often deserve to be thanked. Be candid in regard to any questions to which you may not know the full reply.

**Practice.**—You will need to practise assiduously. Take heart from the fact that Demosthenes, the greatest orator of classical times, had to struggle against the greatest physical disadvantages. His voice was weak and his utterance defective; and it was only by the most unwearied efforts that he overcame these obstacles. One of his methods was to declaim on the seashore to accustom himself to the noise and confusion of the popular assembly—a device which is not necessarily here recommended. In modern times we may cite Bernard Shaw, one of the most brilliant and arresting speakers of our time. He describes the extreme nervousness of his first efforts at speaking, being so nervous that he could not read his notes or remember them. But he joined every debating group which he could and always spoke in debate, likening himself to "an officer afflicted with coward-

dice, who takes every opportunity of going under fire to get over it and learn his business."

**Wider Use of the Art of Speaking.**—Ability to speak well in public can be very valuable upon other important occasions such as informal meetings or interviews. Experience in marshalling facts, in explaining a point of view, in examining diverse aspects of a problem will stand one in good stead when participating in a group meeting of the kind at which, to an increasing extent, business is nowadays conducted. Likewise, experience in public speaking, because it imparts poise and confidence, is a great advantage at an interview of any kind.

The Chief Hints are therefore :—

1. Digest your material well.
2. Be clear as to the sequence of your main points.
3. Make notes of your scheme and don't hesitate to refer to them.
4. Start slowly, maintain a sense of humour and sympathy.
5. Be sincere, above all.
6. Be ready to end in an effective way.

### A GUIDE TO SOCIETIES.

On the following pages are the addresses of some of the societies working in the fields of social service, adult education, international affairs, and outdoor activities. In the article on "Human Relations" in the section "Family Affairs" emphasis is laid upon the way in which fruitful use of leisure can increase a person's happiness. The following addresses will be particularly useful for the lonely person who wants to find a congenial society, where, in company with like-minded people, he can pursue some worth-while activity. They are only a selection from all the societies working in these and allied spheres. Indeed, in the field of social service alone there are some 300 national organisations, many of them co-ordinating other societies with similar interests; and a *Directory of Organisations* so engaged is published by the National Council of Social Service, 26 Bedford Square, London, W.C.1 (6s.). The National Institute of Adult Education, 35 Queen Anne St., London, W.1, publishes a *Directory of Organisations* (5s.) describing all organisations offering a direct educational service; and the National Peace Council, 29 Great James St., London, S.W.1, issue a *Peace Year Book* containing a directory of societies in England working for peace and the chief international bodies.

**What the Societies Offer.**—Many of the societies offer the facility of a unique specialised library, and most of them issue not only journals and magazines but pamphlets giving the latest authoritative views and discussions of contemporary problems. Some, like P.E.P. and the United Nations Association, publish a wide range of background material on current questions. Besides these facilities the associations offer the individual the opportunity of hearing experts and of discussing the subject with others interested in the same subject. Many societies hold not only lectures but conferences, covering the week-end or several days, and some of them hold Summer Schools. A guide to a wide variety of week-end, mid-week, and longer courses called *Calendar of Residential Courses* is issued by the National Institute of Adult Education, 35 Queen Anne St., London, W.1. (1s.).

### Social Service

The National Council of Social Service (26 Bedford Square, London, W.C.1) is the main promotional and co-ordinating organisation of voluntary social work in Great Britain. Its membership includes most of the principal voluntary agencies.

In the countryside it works for Village Halls. It started the Rural Community Council Movement, and has helped to revive rural industries

and preserve the skill of village craftsmen. It has conducted a prolonged campaign to improve Parish Council work (see the section on Local Government); and to promote better conditions of rural life.

In the towns it works for community centres, clubs, and neighbourhood groups and maintains an advisory service to one thousand community clubs.

The Council established the Citizens' Advice Bureaux. It set up the National Old People's Welfare Committee which has taken a prominent lead in getting better conditions of living for old people. The Council publishes a *Handbook of Information on Voluntary Social Services and Directory of Organisations* (6s.).

Some useful addresses are :—

- British Association of Residential Settlements, Toynbee Hall, 28 Commercial St., E.1.
- Central Council for Health Education, Tavistock House, Tavistock Square, W.C.1.
- Citizens' Advice Bureaux Service, 26 Bedford Square, W.C.1.
- Family Planning Association, 64 Sloane St., S.W.1.
- Family Welfare Association, 296 Vauxhall Bridge Rd., S.W.1.
- Industrial Welfare Society, 48 Bryanston Square, W.1.
- Institute for the Study and Treatment of Delinquency, 8 Bourdon St., Davies St., W.1.
- National Association of Parish Councils, 26 Bedford Square, W.C.1.
- National Association of Boys' Clubs, 17 Bedford Square, W.C.1.
- Scottish Association of Boys' Clubs, 12 Alva St., Edinburgh 2.
- National Association of Girls' Clubs and Mixed Clubs, 30/2 Devonshire St., W.1.
- Scottish Association of Girls' Clubs, 13 Eglinton Crescent, Edinburgh 12.
- National Council of Women, Drayton House, Gordon St., W.C.1.
- National Council of Y.M.C.A.'s, 112 Great Russell St., W.C.1.
- 22 Howard St., Belfast.
- National Federation of Community Associations, 26 Bedford Square, W.C.1.
- National Federation of Women's Institutes, 39 Eccleston St., S.W.1.
- Federation of Women's Institutes of Northern Ireland, 28 Bedford St., Belfast.
- National Federation of Young Farmers' Clubs, 55 Gower St., W.C.1.
- National Marriage Guidance Council, 78 Duke St., Grosvenor Square, W.1.
- Save the Children Fund, 20 Gordon Square, W.C.1.
- Scottish Council of Social Service, 10 Alva St., Edinburgh 2.
- Tavistock Institute of Human Relations, 2 Beaumont St., W.1.
- Young Women's Christian Association, Great Britain: 108 Baker St., W.1. Belfast: 3 and 5 Malone Rd., Belfast.

### Adult Education

The National Institute of Adult Education (35 Queen Anne St., London, W.1) was set up by the merger of the National Foundation for Adult Education and the British Institute of Adult Education. It provides information and advice; and it conducts enquiry into problems of adult education. It publishes a *Directory of Organisations* (5s.) which describes all organisations which offer a direct educational service; and gives particulars of colleges offering educational courses. The National Institute also publishes a *Calendar of Residential Courses* (1s.).

Some useful addresses are :—

- Workers' Education Association, Temple House, 27 Portman Square, W.1.
- 177 Hill St., Glasgow, C.3.
- 18 May St., Belfast.

Selwyn House, Endsleigh St., W.C.1.

### International Co-operation

The National Peace Council (29 Great James St., S.W.1) established in 1908, is a federation of national societies concerned in the promotion of peace. Individuals may become associate members. Lord Boyd Orr, F.R.S., is the President. The *Peace Year Book* contains a directory of societies working for peace.

### The Citizen Outdoors

The Ramblers' Association (48 Park Road, Baker St., N.W.1) aims to preserve ramblers'

rights and privileges and to secure more favourable facilities for travelling and for visits to places of historical interest or natural beauty. It regards the townsman's right to recreation in the country as fundamental. It is concerned with footpath law and the encouragement of more active interest in footpaths on the part of national and local authorities. The great majority of members are enrolled through one of the various Federations of Ramblers or Rambling Clubs. The minimum subscription is 5s. a year.

[Note: Unless otherwise stated the above addresses are in London, and this is further indicated by the postal number, e.g., S.W.1. Correspondents writing from places other than London should include "London" as well as the postal number, in the address.]

## THE WORKING OF THE UNITED STATES GOVERNMENT.

In a speech in 1953 which attracted widespread attention, not only in Britain but in the United States, Earl Attlee emphasised the widespread ignorance about what is known as the "separation of powers" in the American constitution as between President and Congress. The following brief outline should help to explain the machinery of government there.

**Constitution.**—The constitution of the U.S. was drawn up at Philadelphia in 1787 at a meeting of the thirteen original states, which had just declared their independence of Great Britain. This constitution, applicable now to the present Union of forty-eight States, distributes power between the executive, the legislature, and the judiciary. It also distributes power between the States and the Federation which unites them. The essence of the constitution is that government is so arranged (by this separation of powers) that no part of it can become too powerful.

**Congress.**—The legislature is Congress, which consists of two bodies, the Senate (ninety-six members) and a House of Representatives (435 members). Two senators are elected for six years from each State, this equal number from all States stressing the equality of States. But the members of the House of Representatives are elected on a population basis (so that in this body States have representatives proportional to their population); and they are elected for two years. Bills, passed by both Houses, can be vetoed by the President; but if a Bill, sent back by the President to Congress, then gets a two-thirds majority in both Houses the Bill becomes law despite the veto.

The President is elected for four years, and is partly an uncrowned king and partly a Prime Minister. In the latter capacity he is the leader of a party, and is responsible for policy. But whereas in Britain the Prime Minister would have a majority in the Commons, the President may have a Congress which is hostile to him. But Congress cannot depose a President as a hostile House of Commons could depose a Prime Minister.

**Election of the President.**—Those who framed the constitution intended that the selection of the President and Vice President should be under the control of electoral colleges. Each State was to choose a number of presidential electors, equal to the number of its members in the House of Representatives plus its two Senators; and these electors were supposed to choose the President. But the political parties nominated their candidates for President and Vice-President long before the electors could pretend to exercise their choice. Parties also nominated the State candidates for Presidential electors, so those nominees were pledged in advance to support the party's Presidential candidate. The two Parties—the Republicans and the Democrats—organise (in the summer of election year for President) national nominating conventions.

**The Executive.**—His Cabinet is appointed by the President for a term at his pleasure. It is therefore responsible to him, and is not responsible to Congress as a British Cabinet would be responsible to Parliament. Thus government is in the hands of the President and not Congress, and it is thus the President who supervises the executive departments (or, as we should call them, the ministries). The President controls foreign relations with the assistance of the Secretary of State (or Foreign Minister, as we should call him). The following position, which seems strange to us, may therefore arise: the President and Cabinet and the majority in Congress may all be of the same party, but not necessarily so. The executive

mansion in which the President lives and works is called "The White House."

The difference between a good Congress and a bad one, it has been said, is largely the difference between a Congress which accepts the President's leadership and one which refuses the initiative he tries to communicate.

**The Courts and the Law.**—Another vital difference between the constitutional system in the United States and that in Britain is the position of the Judiciary or Supreme Court. As explained in the paragraph on Statute Law in the section "Law and the Courts" in this Guide, the British Parliament is the supreme law-making body; and the Courts cannot therefore declare a law to be illegal. But in the United States the Supreme Court can decide whether Congress had power under the constitution (which is, of course, a written constitution, and in this respect unlike ours) to make a law. Therefore if a law of Congress is in question or an action of the executive, the Supreme Court decides whether the law or the action is consistent with the written constitution, which the Court interprets.

## CHANGES IN FRANCE SINCE THE WAR.

During the War, at the fall of France in 1940 the National Assembly conferred power on Marshal Pétain, and this act marked the death of the Third Republic of France. After the war, on October 21, 1945, the French people approved, by referendum, the first Law of the Fourth Republic, which provided for the creation of a new Constitution for the Government of France. The text of this was submitted to popular referendum in October 1946, and the new Constitution entered into force on December 24, 1946, M. Vincent Auriol becoming the first President of the new Republic.

**Constitution of the French Republic.**—Parliament is composed of the National Assembly and the Council of the Republic. Both are elected by universal suffrage on a territorial basis, the former body by direct vote, and the latter indirectly by bodies in *communes* and *départements* (which are local units). The President, who is elected for seven years, exercises functions which are, like those of a constitutional monarch, partly ceremonial, partly advisory, and he can act only with the consent of Ministers. His advice is particularly important when there is a change of government. An Economic Council was created to advise the National Assembly. A French Union was also formed to comprise Metropolitan France and overseas and associated territories.

**The Fourth Republic.**—Besides reaffirming the rights and freedoms of man, consecrated by the Declaration of Rights of 1789, the new constitution proclaimed the need to extend them to social affairs and economic life. It spoke of the duty to work and the right to obtain employment. The two most important differences from the constitution of the third republic are: (1) the great weakening of the second chamber, the Council; and (2) the abolition of the right of any other body than the National Assembly to make laws. If the Council rejects a Bill passed by the Assembly, and the Assembly passes the Bill a second time it becomes law in ten days. The outstanding success has been the Presidency. Changes in the constitution can be expected if agreement can be reached. English people are surprised by the frequency of change of government. This instability is due to the tendency, all the stronger because of the system of proportional representation, for a large number of small parties to be formed. These form alliances, as no one party can hope to secure a majority. But these alliances are often short lived, with the result that groups or coalitions break up, and governments fall. This is in part the explanation of the instability of French governments, which puzzles the English observer.

## THE MINISTRY

THE PRINCIPAL MINISTERS AS AT 20 DECEMBER 1955  
IN THE CONSERVATIVE GOVERNMENT

(which had been formed by Sir Anthony Eden in April, 1955)

## THE CABINET (18)

*Prime Minister, First Lord of the Treasury*—Sir Anthony Eden.*Secretary of State for Foreign Affairs*—Mr. Selwyn Lloyd.*Lord President of the Council*—Lord Salisbury.*Lord Privy Seal and Leader of the House of Commons*—Mr. R. A. Butler.*Home Secretary and Minister for Welsh Affairs*—Major Gwilym Lloyd George.*Chancellor of the Exchequer*—Mr. Harold Macmillan.*Minister of Defence*—Sir Walter Monckton.*Secretary of State for Commonwealth Relations*—Lord Home.*Minister of Labour and National Service*—Mr. Iain Macleod.*Secretary of State for the Colonies*—Mr. A. T. Lennox-Boyd.*Lord Chancellor*—Viscount Kilmuir.*President of the Board of Trade*—Mr. Peter Thorneycroft.*Secretary of State for Scotland*—Mr. James Stuart.*Minister of Housing and Local Government*—Mr. Duncan Sandys.*Chancellor of the Duchy of Lancaster*—Lord Selkirk.*Minister of Education*—Sir David Eccles.*Minister of Agriculture, Fisheries and Food*—Mr. Heathcoat Amory.*Minister of Works*—Mr. P. Buchan-Hepburn.

## OTHER MINISTERS

## ADMIRALTY

*First Lord*—Viscount Cleeve.*Parliamentary and Financial Secretary*—Mr. G. R. Ward.*Civil Lord*—Mr. K. S. D. W. Digby.

## AGRICULTURE, FISHERIES AND FOOD

*Parliamentary Secretaries*—Mr. G. R. H. Nugent, Lord St. Aldwyn and Mr. H. Nicholls

## AIR

*Secretary of State*—Mr. Nigel Birch.*Under-Secretary of State*—Mr. C. Soames.

## COLONIES

*Minister of State*—Mr. John Hare.*Under-Secretary of State*—Lord Lloyd.

## COMMONWEALTH RELATIONS

*Under-Secretary of State*—Commander A. H. P. Noble.

## DEFENCE

*Parliamentary Secretary*—Lord Carrington.

## EDUCATION

*Parliamentary Secretary*—Mr. D. F. Vosper.

## FOREIGN AFFAIRS

*Ministers of State*—Mr. Anthony Nutting and Lord Reading.*Under-Secretaries of State*—Mr. A. R. Dodds-Parker and Lord John Hope.

## FUEL AND POWER

*Minister*—Mr. Aubrey Jones.*Parliamentary Secretary*—Mr. D. Renton.

## HEALTH

*Minister*—Mr. R. Turton.*Parliamentary Secretary*—Miss P. Hornsby-Smith.

## HOME DEPARTMENT

*Under-Secretaries of State*—Mr. W. F. Deedes and Lord Mancroft.

## HOUSING AND LOCAL GOVERNMENT

*Parliamentary Secretary*—Mr. J. E. Powell.

## LABOUR AND NATIONAL SERVICE

*Parliamentary Secretary*—Mr. Robert Carr.

## LAW OFFICERS

*Attorney-General*—Sir Reginald Manningham-Buller.*Solicitor-General*—Sir Harry Brauster Hylton-Foster.*Lord Advocate*—Mr. W. R. Milligan.*Solicitor-General for Scotland*—Mr. W. Grant.

## PENSIONS AND NATIONAL INSURANCE

*Minister*—Mr. J. A. Boyd-Carpenter.*Parliamentary Secretaries*—Miss Edith Pitt and Mr. Richard Wood.

## POST OFFICE

*Postmaster-General*—Dr. C. Hill.*Assistant Postmaster-General*—Mr. C. J. M. Alport.

## SCOTLAND

*Minister of State*—Lord Strathclyde.*Joint Under-Secretaries of State*—Mr. N. Macpherson, Mr. J. H. Stewart and Mr. J. N. Browne.

## SUPPLY

*Minister*—Mr. R. Maudling.*Parliamentary Secretary*—Mr. F. J. Erroll.

## TRADE, BOARD OF

*Minister of State*—Mr. A. R. W. Low.*Parliamentary Secretary*—Mr. D. Walker-Smith.

## TRANSPORT AND CIVIL AVIATION

*Minister*—Mr. Harold Watkinson.*Joint Parliamentary Secretaries*—Mr. Hugh Molson and Mr. J. D. Profumo.

## TREASURY

*Economic Secretary*—Sir Edward Boyle.*Financial Secretary*—Mr. Henry Brooke.*Parliamentary Secretary*—Mr. E. R. G. Heath.

## WAR

*Secretary of State*—Mr. Anthony Head.*Under-Secretary of State*—Brig. Fitzroy Maclean.

## WORKS

*Minister*—Mr. P. Buchan-Hepburn.*Parliamentary Secretary*—Mr. J. R. Bevin.

## MINISTER WITHOUT PORTFOLIO

The Earl of Munster.

SPEAKER OF THE HOUSE OF COMMONS—Mr. W. S. Morrison.

LEADER OF THE OPPOSITION—Mr. Hugh Gaitskell.

## GENERAL ELECTION RESULTS

Party	1950 (Electorate 34,269,764)		1951 (Electorate 34,622,591)		1955 (Electorate 34,855,907)

# The World of Science

## INTRODUCTION

AT no time in our history has it been more necessary for the ordinary individual—and outside our own specialised knowledge we are all ordinary individuals—to know and understand what the scientists are doing; for we have now reached a state of affairs which may well prove to be the cross-roads of human destiny. The dramatic new developments have made it inevitable that all must live or all must die. On the one hand, there exists the possibility of undreamed-of abundance, peace, and happiness for an ever-increasing number of mankind, and on the other total annihilation, if not of the whole human species, at least of all that makes life worthwhile. Which way are we to choose?

In this choice ordinary people must play a major part, but this they cannot do without understanding the issues involved, since free choice must be based upon a certain minimum of knowledge, and this is the reason why *Pears Cyclopædia* decided to include a section dealing with scientific progress.

The section is divided into two parts, the first (I., II., and III.) setting out to give a very brief account of the universe as seen by modern science and forming a background to the second part (IV.), which will discuss some of the more recent developments and discoveries. It need hardly be said that such a section must be sketchy in the extreme, and that only a very few of the main issues can be discussed. But the writer of this section believes with the Editor that it is worth while trying. We are frequently reminded by the learned that modern knowledge increases so rapidly that no single mind can come anywhere near achieving the sort of universal knowledge which was possible, say, in the eighteenth century—and obviously this is quite true. But all this vast body of knowledge is not essential to most of us, who ask only two things from science: (1) that it should give us a *general* picture of the universe which will give us some idea of where we stand in relation to it; (2) that it should give us *particular* information concerning practical issues which concern us in everyday life. To describe modern knowledge from this point of view is certainly possible, although whether the present attempt succeeds in doing so the reader must decide for himself.

Great works of art should be presented in their entirety without abbreviation or alteration, and the cosmic drama is no exception. But even "Hamlet" is drastically cut on the modern stage, and a mere glimpse of a great creation is better than nothing at all. In accordance with usual procedure, the drama is divided into three Acts. The first Act describes the origins and nature of the universe, the solar system, and the earth; the second, the origins and reactions of life upon earth, and the third the origins of mind and human society. We have made our apologies and admitted our limitations; the spectator has read the Prologue. The darkened auditorium is silent. Up with the Curtain!

## I. THE ORIGINS AND NATURE OF THE UNIVERSE.

### THE COSMIC PANORAMA.

**Astronomical Scale of Measurement.**—Let us suppose that we are standing upon the surface of our earth on a starlit night looking upwards at what poets have often described as the "myriad" stars twinkling in the dark (although, in reality, only about two thousand stars can be seen with the unaided eye even upon the clearest night). On this occasion, however, the scale of things has been changed, so that we are able to see our part of the universe reduced to a more convenient size. Our earth has shrunk to the size of a minute speck of dust, and, on the same scale, the sun, around which the earth, together with eight other planets, is circling, is a mere ball of fire about the size of a grape-fruit; the solar system (that is to say, the sun and its planets) fills an area about  $\frac{1}{2}$  mile in diameter. Nevertheless, even with this greatly reduced scale, the nearest star is 2,000 miles away. A few of these stars are very little bigger than our earth, but most are so large that hundreds of thousands of earths could be packed inside them, and a few giant stars could contain many millions of millions of earths. The total number of all the stars in the universe certainly exceeds the total number of grains of sand upon all the sea-shores of the world, yet in spite of this vast assembly, space is almost unimaginably empty, for, if stars were the size of ships, each would be over a million miles from its nearest neighbour. Stars are not scattered uniformly throughout space, but occur in clusters or galaxies, each of which may contain anything from 100 million to 100,000 million stars. The spaces of the universe are so immense that in order to describe them we have to make use of the unit of measurement used by astronomers known as the "light-year."

**Light-Year.**—A light-year is the distance travelled by a beam of light in one year, travelling as it does at the speed of 186,000 miles per second. In terms of this scale of measurement the nearest star is about four light-years away (since light takes four years to reach the earth after setting out from the star), the moon is rather more than one light-second, and the sun eight light-minutes,

away. (That is to say, light, travelling at 186,000 miles per second, takes just over a second to reach us from the moon, and about 8 minutes from the sun.)

**Our Stellar Galaxy.**—Our sun, with the planets circling round it, is only a minute part of one great disc-shaped cluster or galaxy, which, along with the many other galaxies we have already mentioned, is revolving like a great wheel in space. Although this galaxy is revolving at the outer parts of the disc at the speed of almost a million miles an hour, its diameter of 100,000 light-years is so great that it has turned round completely only about twenty times since the oldest stars were born, about 4,000 million years ago. The sun and our planets lie near the edge of the disc, and this is why, on looking directly overhead, we see the great number of stars known as the Milky Way, whereas, when we look towards the horizon, we see fewer and fewer stars; in the first instance we are looking, as it were, through the diameter of the disc, in the second we are looking through its relatively narrow width.

**Other Galaxies.**—As we shall find later, the "stars" seen in the night sky are by no means all "stars" as the word is generally understood. Some are, indeed, single or double stars, but others are whole galaxies of stars, complete island universes in themselves. If we still further reduce our original scale and think only in terms of galaxies (each of which, it will be remembered, may contain anything from 100 million to 100,000 million stars), reducing each galaxy to the size of a bee, the average spacing of galaxies in the universe would be about 3 yards, and that part of the universe which is visible with the largest telescope would extend in all directions for about 2 miles.

**Basic Materials of the Universe.**—Yet the whole of this vast system of galaxies, stars, suns, and planets is built up from only about ninety basic materials, known as *elements*, and of these ninety only about half a dozen are really plentiful. For example, more than 90% of the earth's crust is composed of the elements oxygen, silicon, magne-

sium, and iron, and the fifty least-common elements together form less than a thousandth part of it. Upon the earth and other planets, however, the elements usually exist combined together in the form of *compounds*; water, for example, is a compound of the two gases oxygen and hydrogen, and its chemical formula  $H_2O$  indicates that the smallest unit of water, described as a *molecule*, consists of two atoms of hydrogen and one of oxygen. Atoms, of course, are the smallest unit of an element.

**Atomic Scale of Measurement.**—The atom is so minute that, just as we required a special unit of size for the vast distances of space, so it is necessary to adopt another unit for the very small distances within the atom. Scientists usually employ the metric system in their measurements, and the basic unit of that system is the centimetre (there are about  $2\frac{1}{2}$  centimetres in an inch); but the centimetre is too large for dealing with atomic particles, which have diameters of about  $10^{-8}$  centimetres. (This is a very useful way of writing very small or very large numbers.  $10^6$  means 1 followed by six noughts, or 1,000,000, and  $10^{-8}$  means  $\frac{1}{1,000,000}$ .) It follows, then, that an

atom measures about the  $\frac{1}{100,000,000}$ th part of a centimetre. At one time it was supposed that atoms were single particles which could not be further subdivided, but it is now known that they are composed of even smaller particles known as protons, electrons, and neutrons; the electron is only about one ten-thousandth part of the size of an atom. Few molecules, with the important exception of those of which living things are built, contain more than half a dozen atoms.

**Time Scales.**—In order to set the stage, we have noted the vastly great and the almost infinitely small sizes to be taken into account in astronomy and atomic physics. But the time scales of the universe are just as impressive. It is believed, for example, that the age of our galaxy is about 4,000 million years, and that the earth is rather more than half that age—between 2,000 and 3,500 million years old. When we remember that man has been upon the earth for about half a million years, and that civilisation began about only five or six thousand years ago, we can see how minute a period of the total is the lifetime of the individual.

## THE ORIGINS OF THE UNIVERSE.

**Historical Theories.**—There are very few tribes or nations who have not made some attempt to explain the origins and nature of the universe. The Hebrew account—or, rather, two separate accounts—occurs in the book of Genesis, and is perhaps the most familiar to Europeans brought up in the Christian tradition. However, the ancient Egyptians, the Indians, and the Babylonians, two or three thousand years B.C. also made such attempts. To the Egyptians, for example, the universe was a sort of rectangular box, with Egypt at the middle of its base; the sky was believed to be supported by four mountains at each corner, and the stars were lamps hung from the sky by cables. Round the land was a river, upon the surface of which floated a boat bearing the sun. The stars were grouped in constellations named after the various gods and identified with them. In Babylonia, although very similar views were held concerning the structure of the universe, a great deal of valuable scientific information was accumulated, records were kept of the motions of the heavenly bodies, and by the sixth century B.C. it became possible to calculate the relative positions of the sun and moon in advance and to predict eclipses. Unfortunately for the peace of mind of future generations, the astronomers who had accomplished these valuable scientific observations became increasingly absorbed in the practice of astrology, the absurd and dangerous belief that the stars control human affairs. The astrologers of today's Sunday papers are the lineal descendants of the astrologers of Chaldea of 2000 B.C., and, indeed, use almost the same methods to produce results which are still accepted by multitudes in spite of the demonstrable stupidity of their underlying suppositions and even of their

failure to predict the future accurately as they set out to do.

The first people to accept a wholly scientific outlook—to assume that the universe works through natural laws and can be explained by rational enquiry—were the scientists and philosophers of ancient Greece. In the period between 580 and 450 B.C. Thales of Miletus in Asia Minor pictured the earth as a flat disc floating on water, Anaximander noted that the heavens revolve round the Pole Star (he also developed one of the earliest theories of biological evolution), and Anaxagoras of Smyrna was the first to suggest that the heavenly bodies are made of the same material as the earth. Much later in history Aristarchus of Samos (310–230 B.C.) was the first scientist to suggest that the earth revolves around the sun in a circular orbit, the sun and the fixed stars remaining unmoved; but this theory was too far in advance of its time, and right up to the sixteenth century men continued to accept the theory of Ptolemy of Alexandria that the earth was the centre of the universe, and the sun, moon, and planets were carried round the earth in crystal spheres. From this period, therefore, we must take a jump through time to 1543, when a Polish mathematician and astronomer, Nicolaus Copernicus, best known by the name of Copernicus, published his book *De Revolutionibus Orbium Coelestium*, in which he suggested that the planets, including the earth, revolve around the sun, which “... in the middle of all, sitting on a royal throne, governs the circumambient family of stars.” As most people know, Galileo, who had found confirmation of this theory by using his small telescope, was reproved by the Papacy in 1616, and the Copernican theory was condemned as “false and altogether opposed to Holy Scripture.” The work of the Danish astronomer Tycho Brahe (1546–1601), the German, John Kepler (1571–1630), and the great Englishman, Isaac Newton (1642–1727), confirmed, explained, and described in increasing detail the new view of the Universe which was to prevail right up to the beginning of the present century.

Nearly all this early work was primarily concerned with the solar system—that is to say, with the sun and its surrounding planets—so that the more distant stars were seen only as a sort of background to events in our own little part of the universe. As we shall see later, such men as Buffon, Kant, and Laplace developed theories of the “origin of the universe” which referred exclusively to the solar system. It was not until about twenty-five years ago that the use of increasingly powerful telescopes which enabled astronomers to see farther into the depths of space began completely to change the nature of the problem. Today, the main problem of cosmology (the study of the origins of the universe) is to explain the origin and development of the stellar galaxies which are scattered through the vast spaces of the universe, and from this point of view the origin of the sun and its planets is but a very minor episode of universal history. One of the first discoveries to introduce this new stage in the development of astronomy was the observation of the American Edwin Hubble (1889–1953) that the galaxies scattered throughout space are all moving rapidly outwards away from the centre—that, in fact, the universe is expanding.

**Modern Theories in Cosmology.**—Concerning the origins of the universe there are numerous theories which fall into two main categories: (1) the theories of Gamow, Lemaitre and others, who maintain that the universe began in the form of a highly compressed mass of material some thousands of millions of years ago, and (2) the theories of Fred Hoyle (whose lectures on “The Nature of the Universe” were broadcast by the B.B.C. in 1951), and the Soviet astronomer Vorontzoff-Velyaminov, both of whom maintain (although for entirely different reasons), that the universe had no beginning but has existed in more or less the same state throughout eternity. The latter theories, which will be dealt with later, assume that matter is being continually created, but, for the moment, we shall discuss the first type of theory, which, on the whole, is more generally held. One of the reasons which seems to make Gamow's theory more probable is that there are

various ways of estimating the ages of the heavenly bodies we observe throughout space, and all these seem to suggest that each had a definite beginning in time. For example it is now known that (contrary to the old belief that the elements of which the universe is composed are indestructible and do not change one into the other), such radioactive elements as radium, thorium, and uranium slowly break up at a constant rate into other simpler elements such as lead, and by measuring the relative quantities of such substances we can tell how long they have been disintegrating, and thus how long they have existed. Similarly, when we know of what material the stars are composed, and what chemical reactions go on in their interiors, we can estimate from observations of their present state how long these reactions must have continued. These, and other methods seem to indicate quite clearly that the universe as we know it today has evolved by processes which must have begun only about 4,000 million years ago.

At the famous Mount Wilson Observatory, Hubble observed through the large telescope that the arms of the Catharine-wheel-shaped body known as the great spiral nebula of Andromeda contained some extremely faint stars of the type known as Cepheid variables. Until that time (1924), these nebulae had always been supposed to be single stars with wisps of gaseous material surrounding them, and it had been believed that they were situated within our own galaxy somewhere in the Milky Way, but the fact that the surrounding "gas" contained other stars meant that they must be very much farther away than had at first been assumed. Furthermore, Cepheid variables, the stars seen by Hubble within the nebula, are a peculiar type of star which pulsates with a regular rhythm which is directly related to its brilliance. This means that, knowing the period of pulsation, one can tell the real luminosity of a Cepheid variable, and by comparing real luminosity calculated in this way with the apparent luminosity as seen from the earth, one can measure its distance with considerable accuracy. Measuring the distance of the great spiral nebula by this method, Hubble was forced to the conclusion that it was extremely far away—in fact, nearly one million light-years from the earth. It therefore became clear that this body along with others which had always been supposed to belong to our own galaxy and to be single stars were in reality whole galaxies of "island universes" composed of thousands of millions of stars and situated so far away that light, travelling at 186,000 miles per second, took almost a million years to travel the distance between. An examination of the light coming from these nebulae soon made it clear that they were moving away into outer space at tremendous speeds, and that the whole of space with its millions upon millions of galaxies was in a state of rapid expansion like a soap-bubble blown by a schoolboy. This observation of Hubble's is one of the fundamental facts to be taken into account in any explanation of the process of evolution of the universe. (See *Size of the Universe*, p. 185.)

**Theories of Gamow and Lemaitre.**—According to G. E. Lemaitre (b. 1894) and G. Gamow (b. 1904), Hubble's observation can be explained only by supposing that all the matter now within the reach of our largest telescopes must at one time have been compressed into a single gigantic sphere about thirty times as large as the sun. In such a state of compression it must have been so densely packed that each cubic centimetre weighed no less than 100 million tons, and it appears likely that at this stage no elements existed—that the primeval matter consisted of nothing but protons, electrons, and neutrons indiscriminately mixed together. The temperature of this mass must have been many millions of degrees high. Such a state of affairs, was, for reasons which cannot be discussed here, too unstable to last, and so the mass—the "primeval atom" (Lemaitre's name for it), or "Ylem" as Gamow describes it—began to expand. As the "Ylem" began to expand it became cooler and less dense, the neutrons, protons, and electrons started to aggregate together, and in this way the elements as we

know them today were formed. The whole process of atom-building, in the opinion of Gamow, must have taken less than an hour, and following this event nothing of interest happened for the next 30 million years. The hot material continued to expand, and its temperature fell from many millions of degrees to only a few thousand degrees. This "gas" was basically a cloud of hydrogen and helium in which floated the more complex elements in the form of a fine dust, and in that form it still exists in interstellar space in the shape of giant clouds which sometimes obscure the view of our telescopes. Whereas in the original state of compression the individual protons and neutrons were dashing about with great energy, constantly smashing into each other and preventing any formation of complex substances, the reduced density produced by expansion began to separate the particles and reduce the temperature of the cloud, so that, not only could more atoms be formed, but they could also condense together in much the same way that steam from the spout of a kettle condenses into droplets of water when cooled. Later, the mutual attraction exercised by gravitation acted to form vast condensations of matter which broke up into large individual clouds with empty space between. These were the beginning of the galaxies.

Had it been possible to have observed this process of creation from some distant point in space, we should have seen the single huge primeval star shining with unimaginable brilliance and supplying light for the whole of observable space. But, as the ages passed by, it would be seen to grow larger and slowly lose its brilliance and heat, until about 30 million years later things had completely changed. The temperature of the universe would have sunk to that of a comfortable room, there would be pitch darkness everywhere, and somewhere in the almost complete vacuum of space would be floating the dark clouds of gas and dust which were to give rise to the galaxies at a later stage.

When the first gas clouds began to break off from the main mass, the violence of the rupture caused them to spin rapidly in much the same way that the pieces of a shell fired from a gun rotate after the shell has burst. The clouds so formed were of various shapes, some spherical, others ellipsoidal, and yet others flat. Most, however, began to spin so fast that they assumed a whorl shape with spiral arms rather like the appearance of a whirling St. Catherine's wheel at a fireworks display. This, as we have already seen, is the appearance of the spiral nebula in Andromeda from which Hubble made his deductions of an expanding universe. But the eddies and currents produced within the clouds by this circular motion produced further areas of condensation, and these began to contract under their own weight to form individual stars of greater or less density. Contraction caused the temperature once more to rise, and at a certain critical temperature the ignition point was reached and "thermonuclear reactions" began to occur in the interior comparable to the processes which go on within an atomic bomb. The stars as we know them began to appear, and one by one the lights went on in space.

**Theory of Hoyle.**—It is now necessary to mention the theories of Fred Hoyle, H. Bondi, and T. Gold of Cambridge, who, as we have already seen, hold that the universe has had no beginning and that matter is being continuously created. Briefly, Hoyle holds that, whilst the galaxies are continually moving away into outer space, matter to replace them is constantly being created elsewhere. The commonest element in the universe is hydrogen, which is all the time being burnt up within the stars and converted into helium and the other elements—but if this is the case, Hoyle argues, hydrogen must be constantly created from nothing, since otherwise it would by now all have been used up. According to this theory, then, clouds of hydrogen—the "background material"—are being created spontaneously, and, as already described, these sooner or later condense into galaxies of stars through rotation and the formation of eddies. But once the stars are formed, say Hoyle and his colleague Lyttleton, they continue to enlarge by absorbing the background material through

which they tunnel as they move through space although to what extent they do this will depend upon the amount of dust they have to pass through and the speed at which they are travelling. Once the stars have been formed, the more complex elements are built up in their interiors—or, at any rate, in the interiors of certain types of stars. Some astronomers, such as the Dutchman van Albada, believe that the elements are created from hydrogen and helium within the stars known as Red Giants, others hold with Fred Hoyle that the process takes place within the stars known as exploding Supernovæ.

**The Evolution of Stars.**—As we have seen, the mere process of contraction due to gravitation causes the temperature of a star to increase and makes it burn brighter. But, were this the only source of energy, the stars would no longer be burning so brightly as they in fact do. It is assumed, therefore, that the stars have some other source of energy, and there is little doubt that this source is the atomic transformations which take place in their interiors. These cannot be discussed in detail here, but it appears that the main reaction taking place is the transformation of hydrogen into helium. This reaction causes the star's energy output to remain unchanged for millions of years; but when all the hydrogen is used up the contraction will continue, and the star will progress slowly to its end as a mass of cold dead matter. Before this occurs, however, stars tend to become unstable in their behaviour; they may become large, red, and of relatively low surface temperature, like the Red Giants; they may pulsate at intervals of from a few days to several months, like the Cepheid variables; they may eject huge streams of gas, like the Wolf-Rayet stars; or they may explode, like the Supernovæ. When the latter event occurs, most of the material of the Supernova—perhaps considerably more material than there is inside the whole of the sun—bursts out into space in the form of a vast cloud of blazing gas moving at the speed of some hundreds of miles a second. For a few days this single star burns with a light brighter than that of all the 10,000 million stars in the galaxy containing it, and then slowly subsides to its death. Such an event is rare within our own galaxy (records exist of Supernova explosions in 1054, 1572, and 1604), but it is, of course, not at all infrequent if we consider all the galaxies in space. The importance of such explosions rests in the fact that some astronomers, including Hoyle, believe them to have been responsible for the formation of planetary system, including that of our own sun. To this problem we must now turn. *See also Recent Developments and Discoveries*, p. 185.

### THE ORIGIN OF PLANETARY SYSTEMS.

In the eighteenth century the French naturalist Buffon put forward the theory that our planetary system arose from the collision of a passing comet with the sun, and somewhat later Laplace of France and the German philosopher Kant developed the second hypothesis that, on the contrary, planets arose by a process of condensation in the gaseous envelope with which stars are surrounded. Both these theories, in somewhat modified forms, are still in existence today. Sir James Jeans, for example, believed that a star passing near our sun had drawn out a vast cigar-shaped cloud of matter which had ultimately condensed to form the planets. This, according to Jeans, was the reason why the smaller planets are those nearer the sun and farthest away from it, the larger ones being in the centre—the “fat” part of the original cigar. If Jeans' theory is true, then, since such meetings of stars must be very rare (owing to the relative emptiness of space), planetary systems, and therefore life, which can exist only upon planets, must also be rare. Gamow, however, accepts a modified form of the Kant-Laplace hypothesis, that the thin lens-shaped envelope of the rotating sun cooled and condensed into planets very much as the gas of a rotating spiral nebula condenses into stars. If this be the case, there must be many such planetary systems, since such condensation must be a fairly common process in the development of stars. Finally, however, we have the hypothesis

of Fred Hoyle, to the effect that our sun once belonged to a binary system—that is to say, two stars rotating around each other. Incredible as it may seem when we look up at the stars in the evening sky, more than 80% of all the stars are multiple systems, mostly binary, but in some cases even triple or quadruple stars. The original companion of the sun was the type of star known as a Supernova, which, as we already know, is liable to explode when it has reached a certain stage of development. This, according to Hoyle, is what did in fact occur. The Supernova exploded, blowing out a great mass of incandescent gas which the sun held on to by force of gravity, whilst its centre left our system altogether and is now some unrecognised and distant star far out in the galaxy. Within such a Supernova the conditions make possible the transformation not only of hydrogen into helium (the usual reaction occurring in stars), but also of helium into the heavy elements such as iron, lead, uranium, and so on. “The importance of this is obvious,” says Hoyle, “... it means that the companion star's final gift to the sun was a cloud of gas with just the right kind of composition necessary to account for the constitution of the earth and the planets.” A former objection to the Kant-Laplace-Gamow theory—that, in fact, the sun consists almost entirely of hydrogen and helium and contains only minute quantities of the elements of which the earth is built, has been got over by the theory of the German physicist Weitzsäcker. Weitzsäcker showed in 1943 that the major part of the material used in building the planets must have come, not from the solar envelope, but from the clouds of dust which, as we have seen, lie distributed throughout interstellar space. If this theory is true, it must be the case that almost every star possesses a system of planets.

**The Solar System.**—The planets circle around the sun in orbits—Mercury nearest the sun, then Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto. All are believed to have developed from the condensation of gas and dust particles which, in turn, came either from the solar envelope and the interstellar dust—as Gamow supposes, or, in the view of Hoyle, from the relics of an exploded Supernova which once accompanied the sun. The moon and other satellites may have arisen either in the initial condensation process when the planets themselves were separating out from the cloud of gas and dust, or, as Gamow suggests, after the planets had already formed. Indeed, Gamow believes that the moon separated off from the earth at quite a late stage in history, and that the Pacific Ocean is the “hole” left in the earth's crust by this event, in which the moon was drawn out of the semi-liquid earth by the tidal action of the sun. Being much smaller, the moon has cooled down more rapidly than the earth; it is a dead cold world, solid right through to the centre. The pock-marks on its surface, once believed to be the craters of extinct volcanoes, are now thought to be due to the bombardment of meteorites. The earth is about 80 times the mass of the moon and 50 times its volume; whereas the sun is 332,000 times the mass of the earth and 1,300,000 times its volume. If we represent the sun as a ball 6 inches in diameter, then Mercury is about 7 yards away, Venus 13 yards, the earth 18 yards, Mars 27 yards, Jupiter 90 yards, Saturn 170 yards, Uranus 350 yards, Neptune 540 yards, and Pluto 710 yards. On the same scale, as we saw before, the earth is a mere speck of dust and the nearest star 2,000 miles away. Of the other planets we can say little here, except that they, like the earth and moon, shine only by the reflected light of the sun, and that it seems unlikely that life as we know it could exist upon any of them other than the earth. (It is, of course, entirely possible, and even probable, that life exists upon the planets of other stars.) As most people are aware, the earth travels round the sun once a year in an oval orbit, and its varying distances from the sun together with the tilting of its axis gives rise to the seasons. The month is based upon the time taken for the moon to go round the earth.

**The Earth.**—The birth of the earth, which has been described above, happened (from the evidence of radioactivity) between 2,000 and 3,500 million years ago, and as it assumed in-

dependence, the planet gradually began to cool down. This cooling was not so great as might be supposed; for there is good reason to believe that the *average* temperature of the earth as a whole has been reduced by only about 20 degrees Centigrade since the formation of its solid crust 2,000 or more million years ago. This is because most of the heat is now within the central regions—a core 3,000 miles in diameter (the diameter of the earth as a whole is about 8,000 miles). This core appears to consist for the most part of a highly compressed fluid which was originally believed to be molten iron or iron and nickel. Some scientists, however, believe that core and crust are composed of the same materials, and differ only in respect of temperature and physical state. As the crust of the earth gradually cooled and hardened, its rigid surface “skin” became too large to fit the shrinking interior, and began to crumple in much the same way as the skin of a baked apple does in the oven. These wrinkles and crumpled areas, of course, became the mountain ranges. The earth’s upper crust is a layer of granite about 50–100 kilometres thick, which rests upon a much thicker layer of the rock known as basalt; the only exception to this rule is the floor of the Pacific Ocean, where no granite layer has ever been discovered. In the opinion of some scientists, this confirms the theory that the moon was torn from that area of the earth’s surface at a time when the rocks were already in process of formation. The body of the moon, if these writers are correct, must have torn away with it the entire granite layer from the Pacific bed. Others, however, tell us that granite rocks are nowhere to be found on the floor of the sea, which consists naturally of basalt, and that the granite layer alone is the material from which the continents have been formed.

There is reason to believe that during the history of the earth there have been at least five periods of mountain-folding activity. (It is of interest to note that the crumpling occurs not only upwards, but also down, so that below every mountain there is a corresponding “negative” mountain beneath the surface of the earth.) The oldest of these upheavals, about 350 million years ago, gave rise to the mountains of the Highlands of Scotland and Wales and the peaks of Norway, and many millions of years later the last and greatest of the upheavals crumpled the earth’s surface from the Alps to the Himalayas. The latter ranges are much higher than the mountains of Norway or the Scottish Highlands largely because wind and weather have eroded the Scottish and Norwegian mountains until they now are no more than the worn stumps of their former selves. There could, of course, be no “weathering” of the rocks until the weather had arrived—until further cooling made it possible for the water vapour in the earth’s atmosphere to fall upon the surface as rain. When this had occurred, the old “igneous” rocks (i.e., rocks made by fire—the granite and basalt of the earth’s crust) were torn and battered, fied down, and shaped by the influence of wind and water. Running down the mountain-sides, rain began to wash away the surface of the rocks into the sea; frost chipped pieces off them; the sun dried and cracked them, and, at a later stage, the sand and pebbles so formed made the process even more effective. Sand, blown by the wind, took its toll, and in these various ways then was created a new type of rock which is described as “sedimentary”—essentially sea-sand compressed into stone, although some sedimentary rocks, such as chalk, are formed from the shells of tiny sea-creatures similarly compressed. From time to time, the molten interior of the earth erupted through the surface and formed a layer over the sedimentary rocks, compressing them still further, and sometimes changing them into what are known as metamorphic rocks by the influence of heat and pressure. Thus it is that, although in theory the oldest rocks should be the deepest down and the more recent nearer the surface, this is not always the case; for molten rock from below sometimes poured over the sedimentary rocks, and the crumpling of the earth’s surface often tumbled the different layers over each other. Nevertheless, geologists are able to tell the order in which the rocks have been laid down, and, from

the fossilised animals and plants therein, it is possible to trace the history of life upon the earth. During these early epochs of the world’s history many changes occurred in the geography of the earth. For example, it seems that 275–250 million years ago most of North and South America, Western Europe, Africa, and what is now the Atlantic Ocean were one vast land mass surrounded by water, whilst a narrow prolongation of the Mediterranean stretched out as an inland sea as far as the coast of North America. The continents of Africa and North and South America were gradually separated by the Atlantic flowing in between until, about 75–45 million years ago, they began to assume more or less their present shape. This, at any rate, is the belief of Professor Suess, derived from a study of the rocks, but another theory—the “continental drift” theory—is more generally accepted today, although it is as yet by no means proven.

**Formation of the Continents.**—As long ago as 1858, Snider had pointed out that the two sides of the Atlantic Ocean, if moved together, fit each other like the pieces of a jig-saw puzzle. He suggested, therefore, that America had once been joined to Europe and Africa, and supported his assumption by pointing out the really astonishing correspondence between animal and plant life at the same latitudes on both sides of the Atlantic. (Many less scientific writers have used these correspondences to support the thesis that there existed at one time a continent known as Atlantis which later sank bodily beneath the sea—an extremely improbable belief.) Snider’s work was taken up many years later by Professor Wegener, who, in 1912, produced a considerable amount of evidence to show that at one time *all* the continents—America, Europe, Africa, Asia, and Australia—had been packed together into one vast land mass. Since the Irish geologist Joly had shown that the basalt crust of the earth at a depth of only 20 miles down is at a temperature very near its melting-point and had given reasons for believing that every 100 million years or so accumulations of heat from radioactive sources might cause the basalt layer to melt, it is possible that when this occurs the granite continents are virtually afloat on the surface of the basalt and may tend to float apart. Wegener believes that in some such way as this, by continental drift, the original land mass separated into the separate continents as we now know them. (Another theory without much scientific foundation assumes that a further lost continent known as “Lemuria” once existed between Africa and India in what is now the Indian Ocean.)

**The Oceans.**—Originally the depths of the ocean had been plumbd by navigators using weighted steel wires or cables, but now the usual method is for the investigators on board ship to measure distances by echo-sounding; with the most modern instruments the whole process is carried out automatically, and charts of the sea depths are drawn without human intervention as the ship goes on its way. The greatest known depth, recorded in 1951 by H.M.S. *Challenger*, is in the Pacific in the Marianas Trench, east of Guam, which is between 5,882 and 5,940 fathoms, exceeding the height of Everest by over 5,000 feet. At such a depth the pressure of water is nearly 7 tons per square inch, and when instruments such as glass thermometers are sent down they are crushed into dust long before they reach the bottom. Attempts have also been made by divers to explore the depths of the sea. The American naturalist Dr. Beebe went down to a depth of over half a mile when the pressure was almost 1 ton per square inch in his “bathysphere”—a steel globe 4 feet in diameter—in 1934, and in 1954 two French naval officers descended to a depth of over 2½ miles in a “bathyscaphe” whose observation sphere was subjected to a pressure of about 2½ tons per square inch.

**The Atmosphere.**—Of course, the greatest depths of the sea and the highest peaks of the Himalayas (25,000–29,000 feet) are a mere nothing in relation to the total size of the earth—no greater than the irregularities of the peel

of an orange in relation to the whole fruit. However, greater heights have been achieved in the exploration of the atmosphere; for in the same year that Beebe was exploring the sea in his bathysphere Soviet balloonists went up to a height of over 13½ miles to a level where the pressure of the air was less than 1 lb. to the square inch. This was no small achievement if we recall that when Coxwell and Glaisher ascended to a height of only 7 miles in 1862 the thermometer registered a temperature of —100 degrees Fahrenheit, and without oxygen supply their ears and noses bled profusely and they became blind. The Soviet record was beaten by the Americans Stevens and Anderson, who, in a helium balloon, reached a height of over 14 miles in 1935. Other balloons, unmanned, but carrying measuring instruments, have risen even farther, and one sent up by the Russians in 1935 reached a height of no less than 25 miles. Even this record came to seem insignificant when the German V2 rockets bombarding London from Holland in 1944 rose to a height of at least 70 miles, and the more recent American modifications of the rocket have risen over 250 miles (in 1949).

From these investigations many interesting facts have been discovered about the upper atmosphere of the earth. For example, it is now known that the temperature of the atmosphere drops until a height of about 10 miles is reached; it then remains more or less constant, until, at a still greater height, it begins to rise again. Much information has been collected by the use of wireless and sound waves for exploring the upper air, and curiously enough, one of the first clues concerning the use of sound waves for exploring the atmosphere came from the diarist Samuel Pepys in 1666. Pepys was at that time President of the Royal Society, and he noted that, during the Dutch War, the sound of gunfire in the English Channel could often be heard in London when it was inaudible at Dover or Deal, which, of course, were much nearer to the source of the sound. (Much later, the same phenomenon was noted during the First World War with the sound of the guns from France.) The explanation of this observation was found to be as follows: when a gun is fired, the waves of sound travel in all directions, but the waves traveling near the surface of the earth tend to become absorbed by such obstacles as houses, trees, and hills. Some waves, however, travel upwards until they reach the layer of warm air which reflects them downwards to reach human ears once more, often at great distances from their point of origin. The details of this process were studied more carefully by the British Admiralty in 1927, when it was found that the upward-moving sound waves from an explosion move in a tremendous curve to a height of 9 or 10 miles (i.e., through the area of decreasing temperature); they then move straight up through the area of constant temperature for a distance of 16 or more miles, until, at a height of 30 miles or more they reach the belt of increasing heat, and at this level are reflected downwards once more. This latter belt is now known to contain ozone—a substance similar to oxygen in which each molecule contains three, instead of two, atoms (oxygen is  $O_2$ , ozone  $O_3$ )—and is important, because it is here that the dangerous ultra-violet rays from the sun are mostly absorbed so that only small amounts reach the earth. Were it not for this protective layer, life upon earth might have been impossible.

Wireless waves penetrate even farther into the upper atmosphere, and, like sound waves, are reflected back at a particular level. In this case, however, reflection occurs at a much higher level in a belt of ionised air which conducts electricity at a height of 70 miles; this belt, which reflects the longer wireless waves, was postulated to exist on theoretical grounds by Oliver Heaviside in 1892. When, at a much later date, it was proved to exist, it was named after him the "Heaviside layer." Yet another layer of the atmosphere at a height of 140 miles reflects short radio waves, and is known after its discoverer as the "Appleton layer." Without these layers it would be impossible for radio messages to be sent round the curvature of the earth; for left to themselves they would simply shoot off into space. However, the longest wireless waves, in general, follow the curve of the earth.

The Heaviside layer is produced by the action of the sun's ultra-violet radiation upon the gases of the air, whereas it would appear that the much higher Appleton layer results from showers of electrons from the same source. Almost incredibly, the area of increasing temperature reaches the heat of boiling water just below the Heaviside layer, and in the Appleton layer is near the melting point of copper and gold—1,800 degrees Fahrenheit. Nevertheless, any human being who reached these areas would probably freeze to death very rapidly; for it must be remembered that *temperature* is merely a measurement of the state of agitation of the molecules or atoms of a substance, and when the atoms or molecules are few and far between, then, however high the *temperature*, the total amount of *heat* may be negligible. In fact, Professor Vegard of Norway has shown that the blue colour of the sky is caused by the existence of crystals of frozen nitrogen (air is a mixture of oxygen, nitrogen, carbon dioxide, and minute quantities of other gases) floating about amongst the heated atoms of the Heaviside layer.

### THE REVOLUTION IN PHYSICS.

**Newton and Gravitation.**—From this consideration of the earth, its atmosphere, and its heights and depths, we must turn once more to the universe as a whole in order to see how modern physics, under the influence of Einstein and others, has developed. It will be recalled that Copernicus, Brahe, Kepler, Galileo, and Bruno had gradually come nearer to a view of astronomy in which the earth was forever banished from the centre of things and which was capable of describing in considerable detail the observed motions of the planets around the sun. However, although the work of Galileo and Kepler in particular had proved capable of *describing* the motions of the planets, it had failed to *explain why* they moved as they did. This explanation came from Sir Isaac Newton, who was born in Lincolnshire in 1642—the very year in which Galileo had died. Galileo had been aware that some force must be assumed which was capable of keeping the planets circling in their orbits, but further than this he was unable to go. Newton, as the story goes, found the clue to this mystery whilst idly watching the fall of an apple in his orchard at Woolsthorpe. Pondering the cause of the fall, he saw that the apple must be attracted by the earth in much the same way that a piece of steel is attracted by a magnet, and the next step was to wonder whether the attractive force of the earth could reach as far as the moon and explain the path of the moon around the earth. Kepler, in his third law, had established that a mathematical relationship exists between the average speeds of the planets and their distances from the sun (The squares of the periods of revolution are proportional to the cubes of the mean distances from the sun), and from this law Newton deduced that the forces keeping the planets in their orbits must vary inversely as the squares of their distances from the centre around which they revolve. Comparing the force needed to keep the moon in its orbit around the earth with the force of gravity upon the earth's surface, Newton found that the two closely approximated, and the way was now open to demonstrate that the force of gravitation could explain the behaviour of all the heavenly bodies, the fall of an apple, or the movements of the tides, which are due, of course, to the gravitational pull of the moon upon the surface of the oceans. The heavenly bodies, once thought to be divine, incorruptible, and subject to different laws from those of our small world, had been brought by Newton within the range of man's enquiry; all their movements could be calculated from the simple assumption that every particle of matter in the universe attracts every other particle with a force proportionate to the product of the two masses and inversely proportionate to the square of the distance between them. Left to themselves, all bodies would remain either in a state of rest or travelling in a straight line, were it not that the force exerted by other bodies pulls them out of their normal course.

Paradoxically, although Newton himself was an intensely religious man, the view of the universe which he himself was mainly instrumental in developing led to a picture of nature which was deterministic, mechanistic, and left little room for

God. By the nineteenth century the universe had come to be regarded as a vast piece of clockwork, obeying inexorable rules, and composed of matter which could be divided up into irreducible fragments known as atoms, which were visualised as tiny hard billiard balls. This view, however, has in recent years dissolved before our eyes, and we now see a universe which is vast, non-mechanistic, indeterminate, and composed of "material" which, so far from possessing the properties attributed to it by the nineteenth-century mechanists, has faded into "waves of probability." This revolution in physics arose in the years between 1900 and 1927 as the result of two great theoretical systems—the Quantum theory of Max Planck and the Relativity theory of Albert Einstein. These we must now discuss in greater detail, but first it will be useful to discuss briefly the important forces known as electricity and magnetism.

**Electricity and Magnetism.**—The magnet was a discovery of the Chinese, who were the first to make use of it in the shape of the compass, but the ancient Greeks had also noticed that a piece of amber when rubbed briskly possesses the property of attracting light objects such as paper or silk. In England, towards the end of the sixteenth century, William Gilbert, later known as the "Father of Electricity and Magnetism," pointed out that it is the earth itself which is the magnet directing the compass-needle, and that the attractive power of amber (or glass) is due to another similar force, which he described for the first time as electricity. Benjamin Franklin in America (who discovered the electrical nature of thunder and lightning), Galvani of Italy (who discovered that the legs of a dead frog "jump" when touched with pairs of different metals), and Volta, also of Italy (who produced, on the basis of Galvani's work, the first electric battery), were amongst the great pioneers in this field. (Hence the words "Galvanism," and "Volt"—not to mention "Paradism"—after Michael Faraday—and "Ohm," after an eminent German physicist). The interrelationship between electricity and magnetism became evident when Oersted of Denmark and Ampère of France discovered that a simple coil of wire could behave like a magnet when a current was passed through it, and the American Henry found that if a soft iron core is inserted in the centre of such a coil a very powerful "electro-magnet" results. The latter discovery is, of course, the basis of the modern electro-magnet used in industry to pick up 20 or more tons of scrap metal, and the similar instrument used in hospitals to remove metal splinters from the eye. Conversely, as Faraday found, a coil of wire moved through the lines of force of a magnet will develop an electric current—a significant discovery which is the basis of the dynamo from which most commercial electricity is obtained today. (A dynamo is simply a machine driven by steam or water power which rotates many thousands of wire coils between the poles of a magnet, thus producing a powerful electric current.) The current created in this way is "alternating," passing first in one direction and then in the other, as the wire moves in and out of the magnetic field; on the other hand, the current from a battery is "direct" and flows in only one direction. But the real nature of electricity was not discovered until in 1878 Sir William Crookes passed a current between two points enclosed in a glass tube from which all the air had been withdrawn, producing the so-called "cathode rays," later shown by Sir J. J. Thompson to be streams of electrons. Electricity, then, consists of a flow of electrons along the wire carrying it, and it can be assumed that amber or glass becomes electrified when it is rubbed because some of the electrons are torn off by the friction, and it is therefore attracted by the electrons available in the molecules of the piece of paper or silk. In 1895 Röntgen noted that a vacuum tube produced other rays than the cathode rays described by Crookes; for when a piece of metal was placed in the way of the cathode stream it began to emit mysterious rays which could affect a photographic plate and had the power of passing through certain solid materials. These rays were later to be described as X-rays, and similar rays are produced naturally by radiu-

or uranium when it breaks down into alpha particles (nuclei of helium), beta particles (streams of electrons), and gamma rays (which are of the same nature as X-rays).

**The Nature of Light.**—It is now known that the white light which is visible to the human eye is composed of electro-magnetic waves varying in wave-length and frequency from the relatively long red rays to the shorter violet ones. But these visible rays are only a fraction of the whole spectrum which contains still shorter waves—ultra-violet rays, X-rays, gamma rays, and the cosmic rays which reach the earth from outer space—and still longer ones—heat waves, radar waves, and television and radio waves. With X-rays and, at the other extreme, infra-red rays, it is possible to photograph objects, although such rays are for ever invisible to the human eye. In short, cosmic rays, X-rays, light, heat, radar, and radio and television waves are all of the same nature, and differ only in wavelength and frequency—that is to say, in the number of oscillations per second and the distance from the crest of one wave to that of the next. But what is the real nature of these waves, and through what medium do they pass? We know, for example, that the waves of the sea move through water and that sound waves pass through the air, and it seems clear that waves must always be in some substance. For this reason it was supposed that the electro-magnetic waves of light, radio, and so on must exist in some stuff through which they have to pass; this substance was described as the “ether.”

In 1887, the German physicist Hertz attempted to prove the theory of the existence of the ether which had first been seriously suggested by Clerk Maxwell. Passing an electric spark between two poles of a plate, he attempted to show that the disturbances thus produced would radiate through the ether to influence a similar unconnected coil some distance away. His experiment was successful in that the current passing through one coil was induced in the other, but what Hertz had really discovered was wireless waves with a wavelength of several metres. Sir Oliver Lodge made the same discovery independently in the same year, and in 1890 the waves were first put to use by Marconi. Sir Oliver Lodge also invented the "cat's whisker," which, however, was replaced at a later stage by the thermionic valve devised by Sir Ambrose Fleming in 1904.

**Quantum Theory.**—Now, in 1666, Newton had carried out various experiments upon the nature of light, showing that when white light is passed through a triangular glass prism it is broken up into its constituent colours by the process known as refraction. That is to say, the different wavelengths of light are bent to varying degrees as they pass through the prism—violet being most refracted and red least. (In a similar way, the “prisms” formed by raindrops cause the phenomenon of the rainbow.) But in the years to follow Newton's views concerning the nature of light, which he believed to consist of a stream of particles—the so-called “corpuscular theory”—were unpopular; for it was generally believed that light consisted of waves conducted through the medium of the ether. However, in 1900, Planck, who had been studying the radiation emitted by heated bodies, came to the conclusion that the heat rays were emitted, not in an unbroken stream, but in discontinuous portions which he described as “quanta.” He found that each quantum carries an amount of energy given by the equation  $E = h\nu$ , where  $\nu$  is the frequency of the radiation and  $h$  is Planck's constant—a minute number which has proved to be one of the most fundamental figures in nature. (Its value, for those who are interested, is roughly 0·00000000000000000000000000006624.) We may suppose for descriptive purposes that each atom is a minute planetary system with a central positively charged nucleus around which circulate a sufficient number of electrons in circular or elliptical orbits to neutralise the charge on the nucleus—i.e., 1 for hydrogen, 92 for uranium. There are a number of possible orbits for these electrons to travel in, and the supplying of energy, from outside to the atom results in the jumping

of an electron from one orbit to another. It is this jumping from one orbit to another which gives rise to the phenomenon of light or other electro-magnetic waves. In other words, the changes of orbit in an electron cause a disturbance in space—at one time we should have said in the ether—and this is what we know as an electro-magnetic wave. The waves, as we have seen, do not come out in constant streams but in the bullets of energy described by Planck as quanta, and, as Einstein showed in 1905, not only the radiant energy which was what Planck was considering when he carried out his experiments, but *all* forms of electro-magnetic energy travel through space in separate and discontinuous quanta. (In the case of visible light the quantum is described as a "photon.") As Sir William Dampier says in his *History of Science*: "It is a remarkable fact that, after a century of pure wave theory of light and forty years of electric particles, physicists are now finding that these particles are associated with waves of extremely short wave length. Indeed this modern view of electron particles with their train of waves is very much like Newton's inspired guess (in his corpuscular theory). His amazing insight into nature is once more demonstrated."

Up to 1925 it was assumed that electro-magnetic energy moved in "packets" of waves, which in some respects behaved as particles and in others as waves, whilst electrons and protons were indubitably particles. Physics had still not got over what has been described as the billiard-ball hypothesis, and although the billiard-ball was no longer the atom, the constituent electrons and protons were confidently pictured as such. The Quantum theory had been a blow, but worse was to follow; for it was in 1925 that the French physicist de Broglie showed that electrons should be regarded, not as particles, but as systems of waves. Worse still, Davisson and Germer in America were able to show in 1927 that not only electrons, but whole atoms and even molecules behave as systems of waves; they can be diffracted by a crystal to produce patterns similar to those produced when a beam of light is passed through a pin-hole. We were now presented with a universe in which light consists of particles and matter of waves. How was this paradox to be resolved?

**The Theory of Heisenberg.**—In the years immediately preceding the Second World War the German physicists Born and Heisenberg developed a mathematical system concerning such phenomena, which, although much too complex to be discussed in detail except by the trained physicist and mathematician, carries the following implications. It is asserted, in effect, that the nature of ultimate reality can never be known—we can never find out what things are "really" like. What matters to the scientist is that he should be able to describe and predict the course of nature. We can never know the structure or detail of the individual electron; for whatever method we use to observe it will change it from its original state. Since an electron is a great deal smaller than ordinary light rays, we shall never be able to see it, however powerful the microscope we might invent—the light rays would simply slip past the electrons. Gamma rays of high frequency might be used, but then they can "illuminate" the electron only by hitting it, and by hitting it they would completely change its state from the original one. As Dr. Bronowski has said, such minute objects as electrons are influenced by the methods we use to observe them much as rabbits scurry away from the bright headlights of a car on a dark night, so that we can never know what they were doing before we arrived. In any case, the nature of the single electron does not matter, since in practice we are always concerned with large numbers of them, and collectively they may be pictured either as waves or as particles, just as water waves consist of particles, or molecules, of water. From now on the physicist must realise that his data are statistical in nature, and so long as he studies large collections of electrons his answers will be accurate, but when dealing with small numbers or single electrons they will become less and less so. Heisenberg's famous Principle of Uncertainty states that it is forever impossible in the nature

of things to determine the position and velocity of an electron at the same time; for by the very act of observing its position is changed. In this way, by showing that we must deal in terms of statistics and probabilities, Heisenberg appears to have completely destroyed two of the fundamental principles of the old physics—causality and determinism. He abandoned the ideas that nature shows an inexorable sequence of cause and effect or that we can ever know the nature of ultimate reality. When dealing with the smallest entities in the universe, as Lincoln Barnett says, the scientist is in the same position as a blind man trying to discern the texture and shape of a snow-flake—as soon as he touches it with his fingers or tongue it dissolves. "A wave electron, a photon, a wave of probability, cannot be visualised; they are simply symbols useful in expressing the mathematical relationships of the microcosm." Science can describe *how* things behave with ever-increasing accuracy; but it cannot now, and never will, be able to say *what* they "really" are or *why* they behave as they do. In short, concerning the question as to why things behave as they do, the only answer is that they do so behave.

**Relativity Theory.**—The earlier physicists, including Newton, were concerned with the problem of relative and absolute motion. Thus, when travelling in a car we may stop to have a picnic, and we then say that the car and its passengers are at rest. Nevertheless, the earth upon which we are at rest is travelling round on its axis at the speed of 1,000 miles an hour, and revolving round the sun at the speed of 20 miles every second. Nor is this all. The entire solar system is moving within the local star system at the rate of 13 miles a second; the star system within the Milky Way at the rate of 200 miles a second; whilst the Milky Way is moving in relation to the remote external galaxies at the speed of 100 miles a second. Now, absolute motion can be only in relation to some body which is absolutely at rest, as Newton himself suggested, but so far as we are aware no such body exists, and we are therefore bound to ask ourselves whether the idea of absolute motion has any meaning at all. When the question was posed in this form, there remained one possible solution to the problem: it was conceivable that motion might occur relative to the ether, the hypothetical substance within which all the heavenly bodies moved and which transmitted waves of light throughout the universe. Unfortunately for this theory, however, a classic experiment had been carried out in America, first by Michelson in 1881, then by Michelson and Morley in 1887. These two workers had reasoned that, just as a swimmer moving upstream is retarded in his progress by the current and is similarly facilitated in his movement when swimming with the current, so a beam of light sent against the ether stream (i.e., the stream of ether flowing past the earth as it moves through space) and reflected back should move more slowly than one sent with the stream and similarly reflected. The experiment was carried out in such a way that a beam of light was split in two, sent in opposite directions simultaneously, and then reflected back for measurement of its speed. But the astonishing result was that there was not the slightest difference in its velocity in either direction. The result of the Michelson-Morley experiment left physicists in the dilemma that either: (1) they could reject the ether theory (in which case they would be left with no explanation as to how, and through what, the electro-magnetic waves could travel), or (2) they could reject the Copernican theory that the earth was in motion. Both alternatives seemed equally impossible until, in 1905, Albert Einstein suggested a solution. His solution to the dilemma was the hypothesis that the speed of light is unaffected by the motion of the earth, that, in fact, the speed of light is constant throughout the universe, and remains uninfluenced either by the motion of its source or the receiver. From this hypothesis it follows that there is no such thing as absolute motion, that motion is always relative to some other object, and that the laws of nature remain the same only within uniformly moving systems. But if absolute motion does not exist, it follows that the

idea of absolute time, just as much as that of absolute space, must be rejected. This is necessary because time and space are related—a year, for example, is measured by the length of time taken for the earth to travel once in its orbit around the sun, and a day is the time taken by the earth to make one complete revolution on its axis. But on the planet Mercury a “year” is only eighty-eight days, and, since in that time the planet also rotates only once upon its axis, a “year” and a “day” are the same. There can, therefore, be no such thing as time independent of the system to which it is referred. This observation becomes even clearer when we consider the extragalactic nebulae which are many light-years away; for, since the light from these bodies has taken, in some cases, thousands or even millions of years to reach the earth, we see them, not as they are now, but as they were when the light now reaching our eyes left its source. In fact, it is quite possible that some stars have already ceased to exist, although their light is still passing through space and we are able to “see” them in the sky.

Einstein was able to show that, whilst the speed of light is always constant, all measurements of time or space vary according to the velocity of the system within which they are moving. The equation by which the physicist is able to calculate such variations is known as the Lorentz transformation, and this equation shows that as velocity increases, time slows down and the size of a body contracts. Thus a yardstick moving at 90% of the velocity of light would shrink to about half of its length, and passage of time would slow down correspondingly. In theory, if it were possible for a body to move with the speed of light (and, of course, it is not possible), it would disappear completely and time would stop. It must be remembered that at all ordinary speeds this effect is almost negligible, but it can nevertheless be demonstrated—for example, in the case of atoms. It has been shown by an American physicist that the periodic radiation of an atom which is regularly emitted and forms, therefore, a kind of clock, changes in frequency with its velocity to precisely the degree predicted by the Lorentz equation.

Not only time and space are relative to the velocity of the systems in which they occur; for, as Einstein later showed, mass is also relative. Now, classical physics distinguished between mass (which is a measurement of inertia, and was supposed to be a fixed amount), and weight (which varies from place to place). The mass of a body, the quantity of substance it contains, was theoretically invariable; its weight, which depends upon gravitation, was not. Thus a pound of butter at the equator weighs slightly less than the same amount in England, and at the North pole it would weigh slightly more. On the sun it would weigh 27 lb., and on a small planet perhaps only a fraction of an ounce. Nevertheless, in all these different situations the *amount* of butter will remain the same—that is to say, its mass will not change. But, although this observation still remains true within any system moving at a constant velocity, Einstein has proved that mass increases with velocity. This effect is so definite that physicists dealing with bodies moving at great speeds (e.g., beta particles or electrons moving in a powerful electric field which may reach velocities up to 99% of that of light) have to make allowance for the increase of mass in their calculations. When designing a proton-synchrotron and similar machines, for instance, the plan of the machine has to be modified to allow for the increased mass of particles as their speed approaches that of light. But Einstein's demonstration of the relativity of mass held an even more significant implication—an implication which may well prove fateful for the human race, although whether for good or ill it is impossible as yet to say: this is the seemingly innocuous implication that energy has mass. Since the mass of a body increases with its velocity, and since motion is a form of energy, it follows that the increase in mass results from its increased energy (i.e., its increased velocity). This relationship is expressed by Einstein in the most famous of all mathematical equations:  $E = mc^2$ . This equation states that the energy contained in any piece of matter is equal to the

mass of the body in grammes multiplied by the square of the velocity of light (in centimetres per second). On the basis of this statement, as Lincoln Barnett points out, it can be shown that 1 kilogram (about 2 lb.) of coal, if converted entirely into energy would yield as much electricity as all the power plants in the United States could generate by running steadily for two months. It was, in fact, this equation which made possible the development of the atomic bomb; for, as most people know, in the atomic bomb a quantity of matter is actually converted into energy. Whereas all earlier explosives were based upon the principle of turning a given amount of solid or liquid material into gas, which, of course, occupied more space, and thus produced the “explosion,” the uranium of the atom bomb is actually annihilated—far from being changed from one state of matter to another, it ceases to exist except in the form of energy.

For reasons which we have already discussed, it is evident that time and space cannot be separated: the astronomer looking through his telescope is looking both outward in space and backward in time. All events occur both in space and time. Therefore Einstein describes the universe as a space-time continuum which has four dimensions: three of space and one of time. Further, Einstein's theory no longer regards gravitation as a force causing bodies to attract one another across empty space; gravitation is one form of inertia, and stars, planets, and comets move in the paths they do simply because the properties of the space-time continuum in a particular area make it easiest for them so to move. Contrary to the Newtonian view that matter exists in a fixed and changeless space across which the stellar and other bodies attract one another, Einstein has shown that the properties of the space-time continuum are disturbed wherever there is matter and motion. A star, a comet, or a galaxy, says Lincoln Barnett, distorts the geometry of the space-time through which it moves just as a fish swimming in the sea agitates the surrounding water. Space, we might say, becomes bent or curved in the region of matter—hence the paths of the planets are the result of moving through space distorted by the sun.

Newton and all later physicists had supposed that light always travels in a straight line. But, according to Relativity theory, light, being a form of energy, has mass, and if this is the case light should be deflected from its path by passing through the gravitational field of a massive body just as is a planet or a comet. In his General Theory of Relativity Einstein predicted that light from the stars passing through the gravitational field of the sun would be bent inwards towards the sun on its way towards the earth, and he was even able to calculate the degree of deflection. In 1919 during an eclipse of the sun (for it is only during an eclipse, when the face of the sun is darkened, that sun and stars can be seen together at the same time) physicists travelled to the equator to make observations and found that the deviation predicted by Einstein on theoretical grounds did, in fact, occur in almost precisely the degree he had calculated.

Finally, if, as we have already seen, the space-time continuum is bent and distorted by the material bodies within it; if space is curved in the region surrounding the heavenly bodies, it follows that all the matter in the universe must produce a similar effect—an overall curvature of the whole space-time continuum. The universe must be regarded as a closed system, “finite but unbounded,” and no longer infinite as used to be supposed. It is impossible, and unnecessary, to visualise this state of affairs, but there is nothing necessarily mysterious about it. The surface of a globe, for example, is finite (i.e., it has a finite area) but unbounded (i.e., we could walk around it forever without ever coming to the “end”). There is reason to believe that the universe is of a size and shape such that a beam of light, travelling at 186,000 miles a second, would return to its source after about 200 billion earthly years.

#### THE NATURE OF MATTER.

Just as the Greeks were the first to study seriously the problems of cosmology, so they were first in the field of atomic theory. Democritus, born in Thrace in 460 B.C., was the originator of a theory

in which he stated that "...according to convention there is a sweet and a bitter, a hot and a cold, and according to convention there is colour. In truth, however, there are only atoms and a void." In short, Democritus was asserting that the qualities we attribute to the universe exist only in our own minds; that all that "really" exists are atoms, the movements of atoms, and empty space. Of course, at this early period of history, there could be no scientific reasons for believing in this theory, which had been worked out purely upon logical and philosophical grounds; it was only in modern times that the atomic hypothesis was given a solid foundation based on research and experiment.

**Atomic Theory.**—Modern chemistry and physics really began with the work of the French chemist Lavoisier and the English chemist Dalton towards the end of the eighteenth century: for it was these men and their colleagues who showed that most of the substances we find in nature are what are known as compounds, which, by chemical action, can be broken up into their component parts or elements. Of these elements about eighty-eight are known in nature, but some fifteen others have been made in the laboratory. A compound is something quite different from a mixture, since in a compound the elements (*a*) are united in specific proportions, (*b*) cannot be recovered without breaking the compound up by chemical processes, and (*c*) show quite different properties from those shown by the elements in isolation. For example, if common salt or sugar is dissolved in water we have a *mixture*, since the salt or sugar may exist in various proportions, and the result still feels wet like water and tastes sweet or salt like sugar or salt. Moreover, all we have to do to recover the stuff we put in is to evaporate the water away. On the other hand, common salt itself is a chemical compound, properly described as "sodium chloride" or, for short,  $\text{NaCl}$  (*Na* stands for "Natrium" the Latin name for sodium), in which the explosive metal sodium has combined with the poison gas chlorine in the proportions of one atom of chlorine to one of sodium, to form the harmless and essential table salt. Water,  $\text{H}_2\text{O}$ , consists of two atoms of the gas hydrogen combined with one atom of the gas oxygen; if, instead of one atom of oxygen we use two, the result is  $\text{H}_2\text{O}_2$ , or hydrogen peroxide, an entirely different substance, used, amongst other things, as an antiseptic mouth-wash. Thus, if we took a crystal of table salt and could go on subdividing it into smaller and smaller pieces, we should end up with a *molecule* of salt— $\text{NaCl}$ —and this could not be broken up any further, since we should then, in theory, be left with no salt, but an *atom* of sodium and an *atom* of chlorine. A molecule is the smallest state of subdivision of a chemical compound, whereas an atom is the smallest state of subdivision of an element. Now, it was the fact that in a compound elements are always combined in definite proportions that first gave scientific support to the atomic hypothesis; for example, since water when decomposed into its elements always gives rise to hydrogen and oxygen in the proportion of 2 grams of the former to 16 grams of the latter, this, bearing in mind the chemical formula of  $\text{H}_2\text{O}$ , means that one atom of oxygen must weigh 16 times more than one atom of hydrogen. Hydrogen being the lightest element, its atomic weight may be reckoned as 1, and the atomic weights of the other elements range from 1 for hydrogen to 238 for the heaviest atom, uranium.

Once the atomic weights of the main elements had been discovered, two interesting observations were made. One was the discovery by the Russian chemist Mendeleev that, when the elements are ranged in order of increasing atomic weight, their chemical properties repeat periodically. For example, the alkaline metals, such as sodium and potassium, are always preceded by a "noble gas" such as helium, argon, or neon, and followed by alkaline earths such as magnesium or calcium. Because of such regularities in the table of atomic weights, Mendeleev was able to predict the existence of elements unknown in his day which have since been discovered. The second discovery was that, although most atomic weights turned out to be whole numbers—oxygen is 16, aluminium 27, and iodine 127—there exist

glaring exceptions, such as chlorine, with an atomic weight of 35.5. How this is explained will be seen later.

By the end of the nineteenth century it became possible to calculate the number of atoms in a given amount of material or the weight and size of a single atom. Such calculations showed how very small atoms are—so small, indeed, that one hundred million atoms laid side by side would form a line only one inch long. But at this time the atom was still thought of, as in the days of Democritus, as indivisible, and it was not until the turn of the century that Sir J. J. Thompson was able to show the existence of the minute bodies later known as electrons within the structure of the atom. Electrons have a negative charge of electricity, and are so light in weight that about 1,840 weigh only as much as a single hydrogen atom. But, since atoms are electrically neutral, it follows that, if negative charges are characteristic of electrons, there must also exist other bodies with a positive charge which keep the system neutral. So in 1910 Lord Rutherford discovered the existence of the proton, a much larger body with a positive charge of electricity, which exists in the central nucleus of the atom. The picture of the atom which then began to emerge was as we have seen that of a minute planetary system in which one or more protons formed the central sun around which electrons circulated like planets in sufficient numbers to neutralise the positive charge of the nucleus, one electron neutralising one proton. Since electrons weigh almost nothing, most of the weight of the atom exists in its nucleus, and as is the case in the astronomical solar system, most of an atom is empty space—the diameter of the whole atom is about 20,000 times greater than the diameter of its nucleus. This concept of the atom and the motions of its electrons is largely due to the work of the great Danish physicist Niels Bohr, who formulated the theory now generally accepted in 1914.

Now, most of the reactions affecting the atom occur only in the surrounding system of electrons. When, for instance, elements combine to form compounds only their electron systems are affected, and when an atom takes in, or gives out, energy, this process, we now know, involves the jumping of electrons from one orbit to another. The atomic nucleus is unaffected. However, as long ago as 1896 and 1900, Madame Curie and Becquerel had described the interesting phenomenon known as radioactivity, in which certain heavy elements such as radium and uranium were noted to give off strange radiations which appear to come from the nucleus. A careful study of these elements showed that they gave off three types of radiation: (1) *alpha particles*, which are identical with the nuclei of the gas helium; (2) *beta rays*, which are streams of ordinary electrons; and (3) *gamma rays*, which are similar to X-rays. In this process, the solid metal radium becomes transformed into a gas known as radium emanation. Breakdown goes on until all the radium and uranium are transformed into such common substances as lead, and is known to be spontaneous and uninfluenced by any known form of interference (as we have seen, the breakdown of these radioactive substances over the centuries can be used as a "clock" to tell the age of the earth). In 1919 Lord Rutherford made use of alpha particles to bombard the gas nitrogen, and made the revolutionary discovery that by so doing some of the nitrogen was transformed into one proton plus a nucleus of oxygen. The results of this experiment showed that the ideas of the old alchemists, who had believed it possible to transform one element into another, were essentially correct, and those of the later physicists who had believed it impossible, were wrong. One of the most fundamental beliefs of physics—that the elements were fixed and immutable—had been utterly destroyed.

**Atomic Nuclei.**—In 1932, Sir James Chadwick made the further discovery that atomic nuclei contain, not only protons, but bodies of similar size and weight which are electrically neutral—these bodies are the neutrons. It then became evident that the number of units of electrical charge on the nucleus depends upon the number of protons, each

proton contributing one unit of positive charge, whereas the atomic weight depends upon the number of neutrons and protons combined. The chemical behaviour of an element is determined by the number of electrons encircling the nucleus, and this, in turn, depends upon the electrical charge of the nucleus—i.e., the number of protons. Thus it is possible for an element to exist in two or more forms, differing only in the number of neutrons within the nucleus, since these do not affect its electrical charge and therefore do not influence the properties of the element. Thus we come to the important question of *isotopes*, so important in modern atomic research. The foundation of isotope theory had been laid by Sir Frederick Soddy and his chemical collaborators in Glasgow about 1912. It was found that those elements which had an atomic weight which was not a whole number existed in the form of a mixture of isotopes—that is to say, forms with the same chemical properties but different atomic weight. One form of chlorine, for example, has a nucleus with 17 protons and 18 neutrons, whereas the other has 17 protons and 20 neutrons; both forms, of course, have the same number of encircling electrons—17—and therefore are chemically identical. This makes two isotopes, one with atomic weight 35, the other with atomic weight 37, and since ordinary chlorine is a mixture of these two isotopes in the proportions of about 3 to 1, the resultant atomic weight is 35.5. We now know that almost every chemical element has several isotopes. Hydrogen exists in two forms, one with atomic weight 1 and another with atomic weight 2, the so-called heavy hydrogen or deuterium, and the metal tin has as many as ten isotopes. The "heavy water" which the Nazis were manufacturing in Norway during the last War is water in which the ordinary hydrogen of atomic weight 1 is replaced by deuterium with atomic weight 2.

Neutrons and protons are held together within the nucleus by the strongest forces known to mankind, although the nature of these forces is a complete mystery. They are certainly neither electrical nor gravitational in origin. But what is of practical importance is that immense energy may be released either by building up simpler nuclei into more complex ones or, conversely, by the splitting of complex nuclei into simpler forms. The former method of producing energy is the one we have already noted as occurring within the sun and other stars, where, for example, hydrogen is transformed into helium. It is also the reaction occurring in the hydrogen bomb. The latter method is that made use of in the ordinary atomic bomb, when uranium 235 (i.e., the isotope of uranium with atomic weight 235) has its nucleus broken up into fragments. During the 1930's, the problem arose of how to split the nucleus and so release this energy.

Lord Rutherford, as we have seen, had managed to split some relatively simple nuclei by bombarding them with alpha particles (i.e., the nuclei of helium which consist of two protons and two neutrons), and protons themselves had also been used for this purpose. But both these methods had the drawback that the bombarding particles held a positive charge of electricity, and were therefore repelled by the nuclei they were supposed

to split, which, of course, also held a positive charge; it was, therefore, only a lucky shot which could manage to reach the target. In order to get over this difficulty an instrument known as the cyclotron was devised by Cockcroft and Walton at the Cavendish Laboratory, Cambridge, and was used to accelerate the protons or alpha-particles to a high speed so that they could the more easily smash their way into the nuclei of atoms. But some years later, the Italian physicist Fermi suggested that neutrons, being without charge, would be more convenient to use, and would not necessitate the use of a cyclotron; but this method, too, had a drawback, since neutrons do not exist free in a state of nature, and themselves are only produced by nuclear reactions—i.e., by splitting atoms. Also, until 1938, all the atom-splitting which had been done yielded a mixture of small and large particles—in other words, only small "chips" had been split off the heavy nucleus—whereas it was known that large releases of energy could be produced only if the resulting particles were of fairly large atomic weight, if for instance, uranium 235 were split into particles of atomic weight around 100. This was the position in nuclear physics just before the war, when in 1938 the German chemist Otto Hahn was able to split uranium into approximately equal parts. Hahn had discovered that when the uranium nucleus is bombarded by neutrons, the process sets free more neutrons, which continue to split more nuclei; he had discovered, in fact, the nuclear chain reaction. From this discovery to the invention of the atomic bomb was merely a matter of devising appropriate techniques; a major part of the problem was the separation of uranium 235 from its more common isotope uranium 238. (It had been found by Bohr that only the former was capable of being split by slow-moving neutrons.) We now know that bombardment of a sufficiently large mass of uranium 235 by slow neutrons may lead to one of three results: (1) the process may go on until all the available uranium has been used up, (2) a large amount of energy may be developed sufficiently rapidly to result in an explosion—as in the case of the atomic bomb, or (3) the process may be deliberately controlled in such a way that the energy output is produced only gradually—this is the function of the atomic piles, which it is hoped to put to industrial and other uses.

In recent years a new element known as plutonium has been created by the bombardment of uranium 238 with neutrons, and this element is the second of the powerful atomic fuels. Either uranium 235 or plutonium may be used in an atomic pile which contains so-called moderators—usually heavy water or graphite—to slow down the chain reaction and keep it under control. The future of such piles is uncertain, although quite a number are at present in use—one of the difficulties to be faced is the fact that the dangerous radiations produced necessitate the use of heavy shields of concrete or other material, and this greatly increases the size and weight of such units. Thus, although submarines driven by atomic power may be a possibility, and factories so powered may also be feasible, it is unlikely that aircraft could be so driven.

## II. THE DEVELOPMENT OF LIFE.

Thus far we have been concerned with the origin and development of the material universe, with what scientists would describe as the inorganic sphere of the non-living. We have seen its immensity in space and time, and, on the other hand, the minuteness and lack of "solidity" of the atoms and molecules composing it. But surely the most striking feature of the universe is its impermanence—galaxies disappear into the unknown depths of outer space, stars are born and die, matter itself may be created and destroyed—nothing is permanent. In everyday life we talk glibly of many things as if they would last for ever—the immortal plays of Shakespeare, the permanence of great buildings and art, the everlasting hills, and Rome the eternal city—but all these manifestations of nature or creative genius are as transitory and fading as life itself. Shakespeare himself, wiser than his admirers, realised this:

"The cloud-capped towers, the gorgeous palaces,  
The solemn temples, the great globe itself,  
Yea, all which it inherit, shall dissolve  
And, like this insubstantial pageant faded,  
Leave not a rack behind. We are such stuff  
As dreams are made on, and our little life  
Is rounded with a sleep." (*The Tempest*.)

### THE GEOLOGICAL RECORD.

London is an old city as cities go, although not so old as Rome, but geologically speaking it is not so long since the land upon which London stands was beneath the sea. Later in time there were tropical jungles on the banks of the Thames in which sabre-toothed tigers hunted their prey, the Thames was a tributary of the Rhine, and, still more recently (in fact only yesterday on the cosmic time-scale), the great Ice Ages brought sub-arctic conditions to our land.

The various stages in the history of the earth

can be read by the geologists in the strata or layers of rock laid down since the planet began to solidify, and it is in these rocks, too, that the record of life upon earth may be traced. The earliest rocks in the record are known as the Azoic (no life) rocks, because they show no trace of living things, and these layers are of such thickness that they occupy more than half of the whole record. That is to say, for more than half of the earth's history nothing living existed upon any part of the globe. For millions of years the surface of our planet was nothing but bare rock without soil or sand, swept by hot winds exceeding in violence the wildest tornadoes of today, and drenched by torrential downpours of tropical rain, which, as we have seen elsewhere, gradually tore away the surface to form sandy sediments at the bottom of the seas. In such ancient rocks pushed above the surface by later upheavals we can still trace the marks of primeval oceans as they rippled upon the barren shores or of raindrops which left their imprint perhaps 1,500 million years ago. As we move upwards through the strata, however, traces of life begin to appear and steadily increase as we come to the more recent levels. The earliest signs appear in what is known as the Early Paleozoic Age (or by some writers as the Proterozoic Age), when we find the fossilised remains of small shellfish, seaweeds, and trilobites—the latter were creatures somewhat like the plant-llice of modern times. All these primitive animals and plants lived in the shallow tidal waters of ancient seas; for as yet life had not invaded either the dry land or the deep oceans. It is, of course, clear that these creatures of Early Paleozoic times were not the first living things; they were merely the first creatures capable of leaving fossilised remains, and without doubt must have had more primitive ancestors—amoebic-like forms, jellyfish, bacteria, and so on whose bodies were too soft to leave any traces in the record of the rocks. This problem, however, will be discussed more fully later.

Towards the end of the Early Paleozoic Era, in what we now know as the Silurian period (see chart), there arose a new form of life: the first backboneed animals, primitive fishes somewhat similar to the sharks of today; and in the division of the Upper Paleozoic Era known as the Devonian, they had come to multiply so greatly that this is frequently described as the Age of Fishes. It is about this time, too, that we begin to find traces of animal and plant life upon the dry land. Both animals and plants had acute problems to solve before it became possible for them to live out of water; for the plants had hitherto been supported by the surrounding water as water plants and seaweeds are today, whilst the animals had been accustomed to breathe air mixed in water. These problems were solved, in the case of the plants, by the development of woody tissues which both supported the weight of the plant and acted as pipes transporting water to its leaves, and, in the case of animals, by a long series of adaptations from gills to lungs which we will discuss at a later stage.

The first type of vertebrates (backboneed animals) to live upon dry land was the group of amphibia in the Carboniferous Age, which is today represented by the newts, frogs, toads, and salamanders. In all these forms there is a tadpole stage, which, hatching out of the egg in the water, lives as a fish for some time until its gills give place to a primitive form of lung which enables the animal to live upon land. Even so, amphibia are restricted more or less to swampy or marshy land, and without a damp environment they would dry up and shrivel to death. The highest form of plant life in the Carboniferous period were the giant horsetails, tree mosses, and tree ferns, the fossilised tissues of which are found in the coal measures and are burned as household coal. But these plants also, as in the case of the amphibia, could exist only amongst the swamps and marshes, and life, although it had freed itself from the necessity of existence in the waters of the earth, still had to return to the water in order to reproduce itself. The highlands and the deeper waters of the planet were still empty of living things. Although the Carboniferous period had been a period of warmth and abundance, the Paleozoic Era came to an end with a long cycle of dry and bitterly cold ages. Such long-term

climatic changes were due, it is now supposed, to such factors as changes in the earth's orbit, the shifting of its axis of rotation, changes in the shape of the land masses, and so on. Long before the Ice Ages of more recent times, there are records in the rocks of alternating periods of warmth and cold as far back as the Azoic and Early Paleozoic Eras. This long cold spell at the close of the Paleozoic Era came to an end about 200 million years ago, and was succeeded by a long era of widely spread warm conditions—the Mesozoic Era, the Age of Reptiles.

This was the Era, so often depicted by artists in their imaginative reconstructions of prehistoric times, during which the earth was peopled, not only by all the creatures and plants we have so far described, but also by the new kings of creation—the giant reptiles. The dinosaur, the *gigantosaurus*, the *tyrannosaurus*, the *diplodocus*, and other species of reptile of this period were considerably larger than any creatures living today. The *diplodocus* and *gigantosaurus*, for example, were often 80–100 feet long, although they were vegetarian in habit and were preyed upon by the almost equally huge flesh-eating dinosaurs. Some reptiles returned to a life in the sea (e.g., the *plesiosaurs* and *ichthyosaurs*), but all differed from the amphibia in that they laid eggs upon land and had no tadpole stage. They had dry skins like the modern snakes, lizards, and tortoises, needed the warmth of the sun, without which they would be sluggish and sleepy, and, although requiring water like all living things, they preferred, for the most part, a dry to a moist climate. The Mesozoic period also saw the development of vast numbers of insect species; in the Paleozoic Era there had been centipedes, millipedes, and dragon-flies with a wing-span of over 2 feet, but now there were beetles and many other species, although bees and butterflies were yet to come. The insects were the first creatures to conquer the air, but it was during the Mesozoic period that the first backboneed animal took to flying—this was the *pterodactyl*, a reptile with a bat-like development of the front legs which enabled it to glide and even fly between the giant fern-trees.

But, perhaps 150 million years later, all this seemingly everlasting warmth and sunshine, the lush tropical life, the giant reptiles who had ruled the world, were wiped out by a new period of bitter cold which only the hardy species could survive. A new Era known as the Cainozoic was beginning, ushered in by a period of upheaval and volcanic activity, following which the map of the world came to resemble more closely the picture we know today. The cold period may have lasted several million years, and the main species to survive it were those which had come into existence towards the end of the Mesozoic Era, the seed-bearing flowering plants, the birds, and the mammals. The once all-powerful reptiles from this time onwards are represented only by the comparatively few and relatively small reptilian species of today: the snakes, lizards, crocodiles, and alligators. It was at this time, too, that, long after the creation of the mountains of Scotland and Norway (the so-called Caledonian revolution), or even of the Appalachian mountains (the Appalachian revolution), there arose the great masses of the Alps, the Himalayas, the Rocky Mountains, and the Andes. These are the mountain chains of the most recent, the Cainozoic revolution. Initially, as we have seen, the climate of the Cainozoic Era was cold, but the weather grew generally warmer until a new period of abundance was reached, only to be followed at the end of the Pliocene by a period of glacial ages generally known as the First, Second, Third, and Fourth Ice Ages. The latter were separated by interglacial periods when the climate was milder—we are, in fact, living at the moment at the end of the last Ice Age, for the retreat of ice from Europe began only about 25,000 years ago. It must be remembered, however, that even at the height of the Glacial periods the ice never extended over the whole face of the earth; it was, indeed, limited to an area which never moved farther south than what is now Northern Germany, Northern France, the larger part of the British Isles, small areas in the North of Asia, and about half of the North America continent. The earliest mammals and birds evolved out of

reptilian-like ancestors, whose scales in the former case had developed into hairy fur, and in the latter, into feathers. No doubt these creatures had been driven by the increasing cold at the close of the Mesozoic Era to adapt themselves by these new developments, and, even more strikingly, by an entirely new type of mechanism in that they became warm-blooded. Whereas the earlier species, the reptiles and amphibia, had been cold-blooded, with a body-temperature little raised above that of the surrounding environment, the warm-blooded birds and mammals developed a temperature-regulating centre in the brain which kept their temperature more or less constant independent of climatic conditions. Furthermore, as we move up the evolutionary tree, we find that increasing attention is given to the care of the young. Birds, like reptiles and amphibia, lay eggs, but unlike these creatures they look after their young, which initially have to be fed by the parents. The earliest mammals also laid eggs (even at the present day two species of mammal, the echidna, and the duck-billed platypus of Australia lay eggs), but increasingly became viviparous and brought their young into the world alive (there are, of course, a few species of snake and lizard which do the same). These undeveloped

young had to be cared for by the parent animal and taught—in short, the possibility of a more or less prolonged period of learning arose. When we think of the young of reptiles, fish, and amphibia, which from the outset can look after themselves, and compare them with the human child, which may spend ten or more years learning how to adapt itself and conduct its life, we can see the great importance of this new development. Intelligent adaptation became more important than mere instinct to the more complex forms of life. Finally, perhaps half a million years ago, during the first glacial epoch of the Pleistocene, the earliest type of man developed from a primaval stock of anthropoid apes.

Turning from this all too brief and necessarily over-simplified account of the history of life upon earth, we have to consider the problem of life in more detail. How did it arise? How have the many species of animals and plants evolved from more primitive forms of life? What is the nature of life, and how does the living organism work? How are living things classified? It need hardly be said that only the most sketchy outline of such matters can be given here, but they are so important that we must do our best to give a simple account of them.

### GEOLOGICAL SYSTEMS.

Age in millions of years.	Geological eras.	Geological periods.	Life.
	Cainozoic	Pleistocene	Man
		Pliocene	
		Miocene	Mammals
		Oligocene	Birds
		Eocene	Flowering plants
50	Mesozoic	Cretaceous	
		Jurassic	Giant reptiles and cone-bearing trees
		Triassic	
200	Upper Paleozoic	Permian	Rise of reptiles
		Carboniferous	Amphibia and tree-ferns
300	Lower Paleozoic	Devonian	Age of fishes. First land animals and plants
		Silurian	First fishes
		Ordovician	More complex sea-life
500		Cambrian	Primitive sea-life
	Azole		Life appears
2000		Pre-Cambrian	

### THE ORIGINS OF LIFE.

There are only three possible explanations of the origins of life upon our earth: (1) that it was supernaturally created, (2) that it was brought from some other part of the universe, or (3) that it arose by natural processes from inorganic matter. In a scientific account, however, we must reject the first two of these explanations, not because we know them to be false, but because they are not strictly speaking explanations. It is in the nature of science that it attempts to define all that we observe in terms of natural laws, and to bring in supernatural assumptions would be to break the rules of the game. This is not, of course, meant to imply that no supernatural sphere exists, but if we habitually brought in such assumptions whenever something appeared difficult to explain "naturally," there could be no science at all. Furthermore, there is nothing whatever irreligious in the assumption (held, incidentally, by many modern theologians) that the Deity works through natural laws and does not break the laws He Himself has created. The second explanation, that life was brought from somewhere else in the universe, is also unsatisfactory: (a) because it does not explain the origins of life but merely pushes the problem one step farther back, and (b) because, if we accept the usual form in which this suggestion is put forward—that life was brought to earth inside a meteorite—we are then presented with the extremely difficult task of explaining how any living substance could survive such a journey.

We are therefore left with only the third possibility, that life arose upon the earth from natural causes, and this thesis must therefore be further investigated.

**The Nature of Life.**—All living things are built up from compounds of the element carbon, which has the peculiar characteristic that it can link its atoms in series to form long chains or rings which are immensely more complex than the compounds formed by any other element. When at an earlier stage we were considering the universe of non-living matter, our natural response was, perhaps, to be overwhelmed by the thought of such vast distances in time and space, to feel mere pigmies in the face of such immensity. Indeed, as Monsi-gneur Ronald Knox has said, "Sheer multitudinosity has power to oppress the mind." But here, when we are beginning our study of the organic sphere, it is worth while administering a corrective to our cosmic awe; for all the vast inorganic universe is really a very simple matter. It consists of nothing but radiations, subatomic particles, and atoms, and even the greatest galaxies contain only the simplest of molecules which rarely possess more than half a dozen atoms. The chemistry of even the simplest living things is almost infinitely more complex than the whole of this tremendous collection of galaxies and stars put together. Compare, for example, the formulae of such inorganic substances as sulphuric acid ( $\text{H}_2\text{SO}_4$ ), common salt ( $\text{NaCl}$ ), Epsom salts ( $\text{MgSO}_4$ ), or hydrogen peroxide ( $\text{H}_2\text{O}_2$ ), with a

biological substance such as insulin, which has a formula so complicated that to write it down in full would take up the larger part of this page, and we shall feel much less impressed by the mere "multitudinosity" of the non-living sphere. In his *Doubt and Certainty in Science*, Professor J. Z. Young has pointed out that the human cerebral cortex, the thinking area of the brain, which represents but a small portion of the whole, contains a number of cells more than seven times the total human population of the entire world. Furthermore, its organisation is of such inconceivable intricacy that beside it the organisation of the whole of the rest of the universe can be regarded only as child's play.

So complex are many of the compounds in living cells and tissues (including blood and sap) that it was long supposed that they could be formed only in living organs. The chemistry of carbon compounds is still called "organic" chemistry. In 1828 the German chemist Wöhler artificially made the substance urea, present in blood and urine of higher animals. Many natural substances have since been made artificially, as well as others, such as chloroform, D.D.T., nylon (pp. 566, 575, 652), many drugs, dyes, etc., which do not occur in nature.

Hydrocarbons (e.g., methane, benzene) consist of carbon and hydrogen only; in sugars, fats, alcohols, and organic acids, oxygen is added; the constituent amino-acids of proteins contain nitrogen in addition (some, also sulphur). Complexity is, however, mostly manifested in *arrangements* of atoms of few kinds; as in the mirror-image molecules mentioned below, and the vitamin-like carotene hydrocarbons all  $C_{40}H_{56}$  which differ biologically and otherwise.

The fact that many of the compounds found in living matter can be synthesised in the laboratory gradually led chemists and biologists to realise that, apart from its greater complexity, there is nothing unusual about the chemistry of life, and a new science, the science of biochemistry, was created. More recently an unexpected link between living and non-living was discovered when it was found that some viruses, the smallest and simplest of living things, can exist in crystalline form. Now in crystals the constituent atoms are arranged in rows one above the other, like bales of cotton in a warehouse, and it is extremely difficult to see how living things can at the same time be "alive" and yet exist in crystalline form. Nevertheless, this is so, and the viruses show the most typical of reactions of living matter in that they are capable of reproducing themselves. It is no longer so easy to draw a sharp dividing line between the organic and inorganic, the living and non-living spheres.

Life probably arose from physical agencies acting differentially on simple materials like water, carbon dioxide or methane, and nitrogenous matter, such as ammonia (along with others) when conditions were very different from those of today. If the first step was for the materials to group into suitable systems of atoms, the question is not only *how*, but what would be suitable? The farther the inquiry is pushed, the more awkward it appears (see *Abiogenesis*, p. 536). Three essentials stand out: the living material must contain water and be compatible with it, but must not be soluble; it must be able to reproduce in a way more specialised than viruses do; and it must have at least two kinds of organisation—biological (into at least single cells) and chemical.

About 1850 Pasteur's chemical studies offered a clue which led him to studies of microbes, via fermentations. Briefly, much of living matter consists of molecules having a one-way twist or polarity; that is true of all sugars and nearly all amino-acids (above). Every such molecule can exist in at least two forms, identical in every feature except that they have opposite twists; one is like the other seen in a looking-glass. Yet, nature tends to employ only one member of the pair: the mirror-image molecule of glucose has never been found naturally.

It has been suggested that natural insistence on unsymmetrical patterns of organic molecules is a reflex or "memory" of primeval conditions exerting some preferential stimulus. Ordinary light vibrates equally—without selection—in all directions; but reflected light, as from the moon or

still water, has its vibrations appreciably in particular planes or modes, and is said to be polarised. Solutions of mirror-image molecules act oppositely on polarised light, that being their main physical distinction which may have given the first selective impulse towards life.

Living is a set of reversible chemical processes, constantly going both ways so that growth or an apparently steady state is attained. When an organism becomes unable to reverse its tissue changes with the aid of its enzymes (p. 168) and water, it dies; because it has lost the ability to maintain its organisation, and is ready for dissolution (p. 173) and for the return of its elements to general circulation.

## HOW PLANTS AND ANIMALS HAVE EVOLVED.

**Historical Theories.**—As most people are aware, the theory which attempts to explain the origin of the many species of animals and plants is Darwin's theory of evolution. But it would be wrong to suppose that the concept of evolution, the belief that all living things have developed over many centuries from much simpler forms, originated with Darwin's work in the nineteenth century; for, as we have already seen, certain Greek writers in the fifth and sixth centuries B.C. had already thought of such a possibility. Much later the Frenchmen Buffon and Lamarck, during the late eighteenth and the early nineteenth centuries, developed similar theories, and the philosopher Descartes (who died in 1650) privately held evolutionary views which he suppressed because of "distaste of hell-fire and respect for the Church."

The importance of Charles Darwin, who, with another Englishman, Newton, may safely be accounted one of history's greatest geniuses, was that he was able to present a scientific account of how evolution might have taken place—the theory of natural selection, generally described as the theory of "the survival of the fittest." Even so, Darwin's work would have been impossible had it not been for the work, particularly in the field of geology, of other great men at an earlier period. In 1788, for example, James Hutton of Edinburgh, the founder of modern geology, had shown that the history of the earth had been marked by widespread changes in sea-level, periodic volcanic action, and the raising and wearing-down of mountain ranges in the way we have already discussed. From his work it followed that the earth must be vastly more old than had previously been imagined by those who, without any adequate theological justification, had claimed the Biblical account in the book of Genesis to be literally true. Hutton was followed by William Smith, who, between 1799 and 1817, developed a technique for dating geological strata by means of the fossils they contained, and thereby showed that, at different periods in the earth's history, widely varied types of animals and plants have existed.

There have been, as we have noted already, periods when fishes were supreme, or amphibia, or reptiles; seaweeds precede ferns in the record of the rocks, and coniferous trees the flowering plants. How else can these facts, which are beyond doubt, be explained, except by supposing that life upon earth has developed in a particular order and, in general, from simpler forms to more complex? Certainly attempts were made to explain away such observations, for example, by the Frenchman Cuvier, who, while accepting the geological data, supposed that each epoch in the earth's history had ended in a world-wide catastrophe, after which creation had begun anew. Even more fantastic was the thesis of the brilliant English naturalist Gosse, who was led by his religious beliefs (he was a member of the Plymouth Brethren) to accept the belief that the fossils had been placed in the rocks by a wily Deity to test man's faith.

However, the work of the early geologists made it possible for Darwin's theory to be more readily accepted by scientists than it might otherwise have been, and this theory was based upon the two facts of variation and natural selection.

**Darwinian and Lamarckian Theories.**—It is an observed fact that the offspring of parents in the

animal and plant world both resemble and differ from their parents, and a matter of common-sense to suppose that, in a world in which not all those creatures which are born can survive, those which are best fitted to do so will live longer and reproduce themselves more abundantly than those which are less fitted to the existing conditions.

This, in essence, is the Darwinian theory, and it must be contrasted with the theory of Lamarck to the effect that characteristics acquire during the life-time of organisms could, if useful, be handed on to their offspring. The latter thesis is known as the theory of the inheritance of acquired characters and is now rejected by most scientists, with a few exceptions who will be mentioned shortly.

To put the matter rather crudely, we might say that Darwin's theory of natural selection implies that giraffes have long necks because, in a country in which the food-bearing trees were tall, those animals which happened to be born with relatively long necks were at an advantage, and lived longer and produced more offspring than those with shorter necks. But long-necked parents have, on the average, more offspring with long necks (since the offspring, for reasons which we now know but Darwin did not, tend to resemble more than they differ from their parents), and so the quality of "long-neckedness" tends to increase and that of "short-neckedness" to die out. Lamarck, on the other hand, would have said that the parent animals had to stretch out their necks in order to reach the more succulent branches of the trees, their necks grew longer, and this acquired change was handed on to the offspring. This theory, however, cannot reasonably be substantiated in the light of modern knowledge. Let us take for example, the now well-known fact of drug-resistance in bacteria exposed to penicillin or the sulphonamides, when the physician finds that the formerly potent drug no longer works to destroy the bacteria and his patient may die. Is this result due, as a Lamarckian might suppose, to the bacteria becoming habituated to the drugs and passing on the resistance they have acquired to their offspring? No, as the American biologist Demerec has shown, this is not at all what has happened. The true explanation is that in every generation of bacteria there already exist, completely by accident, a few variant individuals which are resistant to the drug, and ordinarily these are so few as to make no difference to the effectiveness of penicillin or streptomycin or sulphonamide in curing the patient's illness. But if the treatment is continued too long these variants continue to multiply and survive, whilst their competitors, formerly the "normal" bacteria, are all killed off until finally the new penicillin or streptomycin-resistant strain begins to predominate. Similarly, the insects known as water-boatmen vary "accidentally" in colour and shade, but when exposed to insect-eating fish, the water-boatmen of a colour which makes them inconspicuous against the natural background will survive and the others will not. Darwin's idea, therefore, may be expressed as follows: (1) there are always more organisms born than can possibly survive; (2) all organisms show accidental variations from the norm; (3) any variation which proves useful in a given environment has survival value, and gives its possessor an improved chance of surviving and having more offspring; (4) that variation, therefore, will spread throughout the species by the elimination of those who do not possess it and the favouring by natural selection of those who do; (5) in this way, new varieties and even new species may come to be established.

But, it may well be asked, granted that natural selection can cause minor variations to arise within a species, is it possible to explain in this way the "origin of species"? Can we explain by natural selection the transformation of reptiles into birds or of monkeys into man? The answer, according to the vast majority of modern biologists, is that we can. "Natural selection," says Professor R. A. Fisher, "is a mechanism for generating an exceedingly high degree of improbability." That is to say, changes which are small in themselves, may, when selectively picked out by the mechanism of natural selection, add

up in the millions of years which have been available to very considerable changes in a species. On the other hand, the modern biologist attaches less significance to the importance of the minute "natural" variations which Darwin emphasised, and more to the periodic occurrence of "sports" or mutations which Darwin had thought largely irrelevant. This change in outlook was due to the work of the biologist Hugo de Vries, whose *Mutation Theory* was published in 1901. De Vries claimed, and his view is now generally accepted, that evolution depends, not upon the accumulation of continuous minute variations, but primarily upon relatively large and discontinuous variations or mutations. New species, according to this theory, may arise quite suddenly because of changes in the genetic constitution of the organism of the type popularly known as "sports." Two cases of mutation which are well known to the biologist may be mentioned here: the copper beech and the Shirley poppy. The copper beech-tree, with its brownish-red leaves, is now a familiar sight in most parts of the country; but until the seventeenth century it did not exist. About that time a single specimen arose spontaneously from ordinary beech-tree stock, and it has bred true ever since. The first specimen of the Shirley poppy, with its variously coloured petals, was found by the Vicar of Shirley growing amongst a field of ordinary poppies in 1880; he sowed the seeds of the one plant he had found, and it, too, has bred true ever since. It seems likely, then, that such major types of variation occurring spontaneously are of fundamental importance in the evolutionary process.

**The Evidence for Evolution.**—Let us now sum up the evidence for evolution.

1. *The Geological Record.*—We have already seen that in the record of the rocks the simpler organisms precede in time the more complex. Fish appear before amphibia, and both before reptiles. Animals without a backbone occur much earlier in the record than the vertebrates. Similarly, non-flowering plants occur before flowering, and cone-bearing trees before those in which the seed is enclosed. Unless we are prepared to accept quite fantastic theories such as those of Cuvier or Gosse in order to explain such observations, it seems impossible to avoid the conclusion that evolution has happened, whatever the mechanism by which it has occurred.

2. *"Missing Links."*—Although it is true that the links between species are less common than one might expect, nevertheless such links have in some cases been found. For example, the creature known as archæopteryx, found as a fossil, is bird-like in shape; it possessed wings and feathers, and was obviously able to fly. On the other hand, it had a long tail similar to that of a reptile, a reptile's mouth and teeth, and, whereas in modern birds the bones of the wing are fused together, this creature had a quite definite thumb. This seems a clear case of a missing link between birds and reptiles. It must be remembered that the record of the rocks is by no means complete, and that far more fossils have been destroyed in the long course of prehistory than have ever survived, and, of course, many yet remain to be found.

3. *Relatively Complete Series.*—The development of the horse is known fairly completely from the record of the rocks. The earliest-known "horse" was about the size of a hare or a small terrier, and ran about upon the tips of its three toes. It was vastly different from the horse of today. Similarly, not one, but many links are known between man and ape.

4. *The Evidence from Geographical Distribution.*—The marsupials or pouched mammals (e.g., the kangaroo) are found only in Australia; for the Australian continent was cut off from the mainland about 60 million years ago, and at this time the more modern type of mammal in which the offspring develop to an advanced stage within the mother's womb had not been evolved. Yet, as Julian Huxley points out, although the only type of mammal naturally found in Australia is the marsupial, these have branched out into a large number of species very similar in appearance to those which developed elsewhere in the world amongst the placental or modern mammals. There are marsupials which look like dogs, moles, squirrels, and ant-eaters; yet they have no near biological

relationship to such creatures. It is almost as if life had happened to develop along similar lines in two separate planets with similar environments.

5. *Recapitulation*.—Animals develop in a way which is incomprehensible unless we assume that early development is, in some degree, a recapitulation of biological history. Why, for example, should the human child in the early stages of prenatal development show gill-slits like a fish unless it is recapitulating its evolutionary story?

6. *The Evidence from Comparative Anatomy*.—The anatomical similarities between the many different species of vertebrate are striking. As Darwin wrote: "How inexplicable is the similar pattern of the hand of a man, the foot of a dog, the wing of a bat, the flipper of a seal, on the doctrine of independent acts of creation?"

7. *The Evidence from Vestigial Characters*.—There are structures in the human body which are meaningless unless regarded in the light of evolutionary history. The appendix, for example, is useless to man, but important to certain herbivorous mammals; in the inner corner of our eye there is a vestige of the third eyelid found fully developed in birds and rabbits; the muscles whose function it is to move the ear in more primitive mammals no longer work in most men.

The present status of Darwinian theory is best summed up in the words of Professor Neville George, who writes in his *Evolution in Outline*: "A sharp distinction must be made between the two aspects of Darwinism. As an alternative

ments to the contrary in the Bible, he would have been tempted to suggest a common origin for horse and ass, man, and monkey. In botany, John Ray (1627-1705) made a classification of plants in which he divided the flowering plants into the two great categories still used today—the monocotyledons and dicotyledons. (When flowering plants first arise from the seed, it may readily be noticed that some thrust up only one leaf—these, the grasses, are monocotyledons—whilst others thrust up two—these, the dicotyledons, comprise the rest of the flowering plants). But the classification which until fairly recently was the best known was that of the Swedish botanist Linnaeus (1707-78), who devised the double system of scientific nomenclature still used today, and he was the first naturalist to place men, apes, and lemurs into a single category—the order of primates. Below is given a very simple classification of living things which will give some indication of the way in which they are grouped by biologists.

It is, of course, impossible in the space available here to cover the ways of life of the vast number of animals and plants, their physiology (i.e., the way their bodies work), their anatomy (i.e., the geography of their bodies), or their histology (i.e., the microscopic structure of their tissues). Julian Huxley, in his *Evolution in Action*, describes graphically the number and variety of living things with which the biologist has to deal: "At the present time, over a million species of

word for biological evolution, or as an expression of the fact that evolution enters into the ancestral history of animals and plants, it is unexceptionable, and is indeed the central theme of current biology. But as implying a particular kind of evolutionary mechanism which Darwin favoured, it is by some scientists regarded as erroneous and by many others as inadequate. During the present century its deficiencies in genetics have been met by Mendelian theory, the synthesis of Darwinian natural selection and Mendelism being known as Neo-Darwinism."

We may, therefore, conclude: (1) That evolution is an undoubted fact. (2) That "natural selection"—the "survival of the fittest," as described by Darwin is also an undoubted fact. But (3), many scientists doubt whether natural selection is *in itself* capable of explaining the evolution which has occurred (i.e., whether the accumulation of small and continuous variations is the most important mechanism whereby evolution occurs).

**How Are Living Things Classified?**—One of the greatest thinkers of all time, and certainly one of the earliest and best biologists, was the Greek Aristotle, tutor to Alexander the Great. In his writings Aristotle described more than five hundred animals with diagrams illustrating his dissections, and he was one of the first biologists to see the significant differences that may lie between superficial similarities; for example, he was aware that the whale, in spite of its superficial similarity to a fish, is, in fact, a mammal. Many centuries later, Buffon (1707-88), whose name has already been mentioned, made some attempt at classifying animals. Noting the anatomical similarities between mammals, he wrote that, had it not been for the express state-

ments to the contrary in the Bible, he would have been tempted to suggest a common origin for horse and ass, man, and monkey. In botany, John Ray (1627-1705) made a classification of plants in which he divided the flowering plants into the two great categories still used today—the monocotyledons and dicotyledons. (When flowering plants first arise from the seed, it may readily be noticed that some thrust up only one leaf—these, the grasses, are monocotyledons—whilst others thrust up two—these, the dicotyledons, comprise the rest of the flowering plants). But the classification which until fairly recently was the best known was that of the Swedish botanist Linnaeus (1707-78), who devised the double system of scientific nomenclature still used today, and he was the first naturalist to place men, apes, and lemurs into a single category—the order of primates. Below is given a very simple classification of living things which will give some indication of the way in which they are grouped by biologists.

#### ADAPTATION TO ENVIRONMENT.

**The Cell Theory.**—In the early nineteenth century two German scientists, Schleiden and Schwann, were able to show, the former in the case of plants, the latter in the case of animals, that all living tissues are made up of vast numbers of separate cells. These cells all share certain common features, no matter in which tissue they occur, but also, of course, they differ from each other, depending upon the sort of function they have to carry out in relation to the whole. As a "typical" cell, we may take the amoeba, a minute single-celled animal which is small enough to be just beyond the power of the naked eye to see, and consider its structure and mode of life. The amoeba has the appearance of a minute blob of colourless jelly composed of the material known as protoplasm, which was described by Huxley as the physical basis of life. By special methods it can be shown that the

apparently undifferentiated jelly has, in fact, a quite definite structure; for the major part of the cell-body is a spongy network of firm jelly, within the meshes of which a more fluid portion is held. The significance of this type of structure is that the internal surfaces of the cell (upon which most of the physico-chemical reactions of life take place) are thereby enormously increased. (This utilisation of a spongy network to increase the extent of the all-important surface areas upon which chemical and physical reactions most readily occur is a commonly-found technique in living bodies which enables a vast surface area to be contained in relatively small space. The human lung, for example, consists of such a spongy framework enclosing a surface area which, if spread out completely, would cover more than one hundred square yards—of course in the case of the lung the network is made up of millions of cells, whereas here we are discussing the internal structure of a single cell.) Like all cells, the amoeba is bounded by a cell-membrane, a barrier which permits the absorption of materials to be utilised in maintaining life, and conversely, the excretion of waste materials; we may picture the cell-membrane as a sort of national frontier which selectively permits or refuses exit or entrance to would-be travellers. The control of the vital processes in the cell is carried out by a small, roundish body known as the nucleus, which lies usually somewhere near its centre. Without the nucleus the cell could not exist or carry out its essential functions.

The remarkable thing about the amoeba is that within the small compass of a single cell all the necessary functions are carried out just as adequately (although, of course, at a much simpler level) as in the vastly more complex human body. When the amoeba has to move, it does so by thrusting forward a portion of the edge of its limiting membrane in the form of what is known as a pseudopodium, gripping the ground with this, and flowing forward. When presented with a tiny grain of glass coated in meat-extract, it takes the object into its body, absorbs the extract, and rejects its glass core. When presented with a harmful stimulus, it withdraws, and when it feels the need to reproduce its kind it simply divides, nucleus and all, into two. In other words, the simple amoeba, as effectively as the largest elephant or the most intelligent man, carries out the necessary functions of digestion, respiration, circulation, sensitivity and adjustment to the environment, movement, and reproduction; and so, in fact, does every living cell, no matter to what animal or plant it belongs. The cells within the tissues of multi-cellular individuals are, as we have said, modified from the basic plan represented by the amoeba according to the functions they have to perform. Muscle cells, for example, have specialised in the function of movement; nerve-cells have specialised in sensitivity, skin-cells in protection, and so on. There is a close similarity between the single-celled amoeba and the small tribal community of men in which no specialisation has as yet developed—where every man is his own hunter, warrior, cook, and blacksmith. The many-celled animals or plants, on the other hand, resemble a modern industrial city in which each man is highly specialised and has his own particular duty to carry out in relation to the whole—the soldier is almost a whole-time warrior, the scientist a full-time thinker, the cook a specialist in feeding, and so on. (Incidentally, when life gave up dependence upon the sea it did not thereby free itself from the need for salt water; for our blood-stream is an inner sea with the same salinity as the primordial ocean which once bathed our ancestors—we do not need the geographical sea, because we carry it about with us, and our body cells are still bathed in its essential tides). Specialised tissues are recognisable by their design—the skin cell because it resembles a paving-stone, the nerve cell because it resembles a telephone wire, the circular blood-cell, the spindle-shaped muscle-cell, and many other types. It is the work of the histologist, the microscopic anatomist, to study such details of the minute structure of living things.

#### THE PHYSIOLOGY OF MAN.

**Digestion.**—Animals, unlike plants, can exist only by taking in and digesting organic material—

that is to say, the dead bodies of other animals or plants. The necessary materials which they must absorb from their food come under the three categories mentioned elsewhere (p. 783), of protein, carbohydrate, and fats. Proteins are the body-building foods, the "spare parts" if we think in terms of a machine, which are found in lean meat, nuts, cheese, and egg. Carbohydrates, the starches and sugars, are found in fruits, grains, and so on; they are fuel foods, the petrol of the body-engine. Finally, fats, found in animal and vegetable oils and fats, form the insulating system of the living machine. In addition to these, water, vitamins (see in Medical Section), certain inorganic salts, and minute quantities of certain metals (iron and calcium) are necessary to life. Dieticians measure the value of food (a) in terms of the necessary amounts of these basic foodstuffs, and (b) in terms of its energy-giving value. The average man or woman engaged in light work requires  $3\frac{1}{2}$  oz. of protein,  $3\frac{1}{2}$  oz. of fat, and  $16\frac{1}{2}$  oz. of carbohydrate daily, and such a diet, in terms of energy, provides nearly 3000 Calories; an individual doing heavy work may require 6000 or more Calories daily. (It must be emphasised that an adequate diet must supply both the requisite number of calories and the correct proportions of the basic foods.) (See Food in "Medical Section.")

**Enzymes.**—Food, of whatever sort, is broken down in the digestive tract—the stomach and small intestine—into the few simple materials which the body can make direct use of. Fats end up as the so-called fatty acids and glycerine, carbohydrates as glucose and fructose, and proteins as amino-acids. The most elegant meal thus ends up in the same forms as the most humble, and this is the scientific explanation of the observation which troubled the poet:

"It's a very strange thing, as strange as can be,  
That all that Miss B eats turns into Miss B."  
(Walter de la Mare.)

The substances which bring about this breakdown which we know as digestion are known as enzymes, a word which means "in yeast," because it was in yeast that they were first discovered. The enzyme in yeast is, as we know, used in the baking of bread and in brewing, because of its property of breaking-down starch into sugar and alcohol; in the process it liberates carbon dioxide gas, which can be used to leaven bread. The enzymes in the digestive tract of animals, pepsin, rennin, trypsin, steapsin, and others, each perform a specific function in breaking down individual food substances. A very large number of enzymes, each producing different types of effect, have been found in nature in every kind of living thing; they exist in every tissue, and are as necessary to plants and bacteria as to the more complex animals. Life is a matter of enzymes, for nearly all vital processes take place through their activity, and it is an extraordinary demonstration of the essential unity of life that the simplest organisms possess enzymes which are very similar in nature and even in number to those of the highest. For example, a single bacterium so small that it would take about 300 million million to weigh 1 oz. may have in its protoplasm several hundred distinct types of enzyme, or even a thousand or more. It has recently been found that such drugs as the sulphonamides and the antibiotics (penicillin, streptomycin, aureomycin, etc.) produce their fatal effect upon certain bacteria by putting their enzyme systems out of order.

**Environment, Internal and External.**—Absorbed into the blood-stream, the amino-acids, fatty acids, and glucose go each to their appointed place; the amino acids to replace damaged or aged tissue-cells, the fatty acids to the fat stores of the body, and the glucose to the liver, where the excess over what is required is stored in the form of glycogen. Broken-up and useless protein (nitrogenous) material is excreted through the filters of the kidneys in the form of urea and uric acid. The body always works as a unit, and shows a remarkable ability to maintain a constant balance between its constituent substances and to compensate when its balance is upset. This tendency is described by the physiologist Cannon as "homeostasis." Although the body-balance is constantly being

disturbed both by the breakdown of its own tissues and by changes in the surrounding environment, immediate steps are always taken to maintain a state of adjustment. When food material is used up the stomach muscles begin a series of rhythmic contractions which are consciously appreciated as a feeling of hunger and followed by the search for more food to redress the lost balance. Violent exercise necessitates the taking in of more oxygen, and automatically the organism breathes more rapidly; excess heat is produced and, in order to disperse this into the atmosphere, the tiny blood-vessels of the skin dilate, causing more heat to be given off, so that the body-temperature remains almost constant. In cold weather, when heat has to be retained, the blood-vessels contract, the skin becomes pale, and heat-loss is reduced. If we drink a lot, the blood might be expected to become diluted, but the excess water is excreted by the kidneys, leaving the chemical constitution of the blood unchanged; conversely, when water is lacking, the urine excreted is small in amount and concentrated. Within a great variety of changing circumstances the body-balance is maintained.

**The System of Defence.**—The red cells of the blood are mainly concerned with the transport of oxygen, whilst the white cells, which are normally in the proportion to the red of 1 to 500, are of various types, all concerned with defence. Bacteria entering the body exert their harmful activity through the poisonous toxins which they excrete, and one type of white cell has the function of producing antitoxins—substances which neutralise the bacterial toxins. Yet another type of white cell produces antibodies which act upon the germs, causing them to coagulate into clumps which are more easily dealt with by the third type of white cell, the phagocyte, which absorbs bacteria in much the same way as an amoeba digests other small plants or creatures. Bacterial invasions of the body are a battle which either side may win or lose, and there are always casualties; in the case of an infected wound, for example, the pus which exudes from the surface is largely composed of the bodies of white cells which have perished in the struggle. This defensive system is the theoretical basis upon which is built much of the preventive medicine of modern times. When, for instance, a person is inoculated against typhoid, what we are, in fact, doing is to inject into him a carefully calculated dose of dead typhoid germs which will cause his body to respond with the production of antitoxins and antibodies. In the case of any typhoid infection these may destroy the germs completely or, at the worst, ensure that the infection is a very mild one. On the other hand, we can inject animals with the disease, causing them to produce antitoxins which are then withdrawn in the blood-plasma and injected into a person who is either already ill or has recently been exposed to infection. Whereas the former method produces what is known as "active immunity," the latter leads to a more temporary state of "passive immunity." Active agents are known as "vaccines," passive ones as "sera," the plural of the word serum. In some cases—e.g., in the case of the new B.C.G. vaccine against T.B.—the patient is actually injected with live germs which have been bred to produce a weak strain harmless to the individual but nevertheless capable of producing immunity when they are injected.

**The Nervous System.**—Perhaps the simplest way of understanding the nervous system, which has the function of correlating all the activities of the complex mechanism we have been discussing, is to regard it as a hierarchy of control similar to that found in a factory or the army. All the more important messages reach the Board (the cerebral cortex or higher centres of the brain) along the sensory nerves (the incoming telephone system), and on the basis of this information the Board sends out directions as to what to do along the motor nerves (the outgoing telephone system). But, it need hardly be said, the arrival of all available information from below, so far from being a help, would be a nuisance, and to a considerable extent the various departments have to be autonomous and manage their own internal affairs. A prick from a pin causes the limb to

be rapidly drawn away from the source of pain long before ever the message has reached the brain; for the incoming message goes at once to the spinal cord, which automatically sends back the impulse to withdraw. This is an example of the simplest kind of nervous action described as a spinal reflex. A more complex type of automatic control is seen when we attempt to learn skating or cycling; in this case we begin by painfully and deliberately carrying out the appropriate actions, which, at this stage, are initiated by the cerebral cortex. But as we improve the actions are taken over by the lower centres in the cerebellum and elsewhere, which act as an automatic pilot in an aircraft, and we cycle or skate without conscious effort. It is therefore a principle of nervous action in the more complex animals that the higher centres should not be troubled with what can equally or more effectively be carried out by the lower ones.

No part of the body gives a clearer picture of evolutionary development than the nervous system. As we move up the evolutionary scale the older and more primitive types of nervous system do not so much disappear altogether as become overlaid by newer levels. Thus roughly speaking we find the more primitive functions situated in the lower parts of the brain and the functions which are more recent in evolution higher up. The statement of Aristotle that the soul of man has vegetative, animal, and rational parts, is very near to the truth; for in the cerebral cortex is the rational or thinking brain and in the lower centres of the cerebellum and thalamus there lies what might justly be described as an animal brain concerned mainly with sensation or movement and a primitive degree of consciousness. Lowest of all is the vegetative brain of the hypothalamus concerned with the most simple of all the body's functions—the control of the internal organs, the beat of the heart, the movements of the intestines, and so on.

That part of the brain which we have described as the hypothalamus is the control centre of the most primitive nervous system: the autonomic nervous system, which takes the form of certain nerve chains lying at the back of the chest and abdomen. The familiar term "solar plexus" refers to one of the ganglia or knots of nerve cells upon this chain, which possesses many such ganglia scattered throughout its length. Whereas the nerves of the central nervous system are either sensory or motor in function, the nerves of the autonomic system are divided into what are described as sympathetic and parasympathetic groups, the former concerned with preparing the organism for emergencies, the latter with preparing it for relaxation. When the organism meets a dangerous situation, it has only two possibilities of action—fight or flight—and the sympathetic division of the autonomic nervous system has the function of preparing it for such circumstances. It is this part of the nervous system which produces the rapid heart-beat, the dilated pupils, the pallor, and (in the case of hairy animals) the erect hair of the back and neck, all of which are the outward signs of fear and anger. There are also internal changes: an increased blood-sugar, an increase of blood-supply to the muscles with a reduced supply to the internal organs, and so on. All these changes, which result from the secretion of a substance known as adrenalin into the bloodstream under the influence of sympathetic stimulation serve a useful function to the organism—they increase its fighting efficiency, or, should the worst come to the worst, its ability to escape.

The parasympathetic division of the autonomic nervous system has an exactly contrary effect. Under its influence, the heart beats more slowly, digestion (which is inhibited by sympathetic action—hence the danger of eating when one is angry or worried) proceeds peacefully, the pupils contract, and the skin becomes flushed. The results of parasympathetic stimulation are seen at their most obvious in the baby after it has been fed at its mother's breast, or, a somewhat similar situation, in the gourmet who, after a large meal, is settling down to enjoy his cigar. The autonomic nervous system has only recently been fully investigated, and is of tremendous importance in understanding the so-called "psychosomatic disorders" such as angina pectoris, gastric ulcer, high blood-pressure, and so on, all of which are

believed to be physical diseases due basically to chronic anxiety. The autonomic nervous system is, in fact, the physical basis of the emotions; the thalamus, the part of the brain in which emotions become conscious.

**Hormones.**—The sexual characteristics of men and women are controlled by secretions from the sex-glands. These secretions are examples of the important class of physiological substances known as hormones which have a profound influence upon the body functions, structure, and even the personality of the individual. The thyroid gland in the neck produces a hormone named thyroxin which, when secreted in excess, causes the individual to become thin, excitable, flushed, and nervous; when, on the other hand, the secretion is lacking, as in the disease of myxedema, the patient becomes slow, stupid, and emotionally dulled. The suprarenal glands, which, as the name implies, lie above the kidneys, produce several hormones, one of which, adrenalin, we have already described in connection with the autonomic nervous system. Adrenalin enables the individual to face an emergency, to fight or run away. Another suprarenal hormone, cortisone, has recently produced dramatic results in the treatment of certain diseases; it is mentioned in the Medical Section. All these glands have this in common, that they secrete their hormones directly into the bloodstream instead of by way of a duct; they are therefore known as the endocrine or ductless glands. The most important endocrine gland of all is the pituitary, which is about the size of a pea and situated just below the hypothalamic area in the base of the brain. The pituitary has been described as the "conductor of the endocrine orchestra," since it controls all the other glands, and more than any other gland it profoundly affects body-build and character. Pituitary defects or excesses may cause the individual to grow into a giant (gigantism or acromegaly); to grow monstrously fat; to become a human skeleton; to be a wizened dwarf or a child who never grows up. Here again, as in the case of the autonomic nervous system, we find ourselves on the narrow border-line between physiology and psychology.

#### THE PHYSIOLOGY OF OTHER ANIMALS.

**Digestion.**—What we have said about the structure and function of the human body applies very closely to the other mammals. It may be useful to note, however, some of the variations which have resulted from adaptation to widely divergent ways of life. In the case of digestion, for example, there are characteristic differences between the digestive systems of animals which are carnivorous and those which are herbivorous. All herbivorous animals have flat grinding teeth for crushing their food, and sheep have no front teeth in the upper jaw, the teeth being replaced by a horny plate against which it clips off the blades of grass with the lower teeth and swallows them immediately. The stomach of sheep and other animals that chew the cud consists of four separate compartments, and the food swallowed during grazing enters the first two compartments, in which it is stored and softened. After eating, the sheep settles down quietly to "chew the cud"—a process in which the food from the first two compartments of the stomach is returned to the mouth for further chewing; it is then returned through the first two into the third compartment, and returned again. Finally, it reaches the last, the true stomach, where it is digested by the gastric juices. Carnivorous animals need sharp tearing teeth, and as their food is largely protein, and protein digestion begins in the stomach, they gulp their food down, as one may observe in a dog.

The amoeba eats simply by flowing round and absorbing food-particles, and even in more complex animals such as the hydra, the body-cavity and digestive tract are identical. Earth-worms, however, have a more complex digestive tract consisting of mouth, pharynx, crop, and gizzard (in which the humus upon which they feed is crushed into a soft pulp) before entering the intestine. This sort of arrangement is very similar to what is found in birds in which the food from the mouth (which is without teeth) passes down

the cesophagus to be softened and stored in the crop. From the crop it enters the stomach to mix with the digestive juices, and then passes on to the gizzard, which has thick muscular walls and contains stones which the bird has swallowed and which take the place of teeth. In the gizzard the food is ground to a pulp.

In birds there is no separate excretion of urine and faeces, and the faeces contain waste matter from both intestines and kidneys which passes out through a single tube or cloaca, which is also the tube by which impregnation takes place and by which eggs leave the body. Bird faeces are rich in nitrogenous materials and, in the form of guano, are a valuable manure.

**Movement.**—Movement in the mammals is usually upon land, but we have the interesting exceptions of seals, sea-lions, walruses, and whales, in which the limbs have become modified to form flippers for swimming in water. Nevertheless, these flippers in their bony structure correspond, bone for bone, with the limbs of land animals. The limbs of bats have been even more drastically modified for progression in the air; in this case the bones of both fore- and hind-legs have become encased in the covering of skin which forms the wing. Other, although slighter modifications, are seen in the use made by monkeys and man of the fore-limbs for manipulation of objects; man, however, is the only mammal which does not use the fore-limbs for walking at all.

**Reproduction.**—There are two modifications of the reproductive function amongst mammals which are worth noting here. The echidna and the duck-billed platypus are unique in that they lay eggs, and marsupials, such as the kangaroo, compromise between this method of reproduction and that found amongst the placental mammals (i.e., all other mammals which retain the offspring within the uterus until it is more or less ready to assume a semi-independent life of its own). The young of the kangaroo are born when they are only about 1 inch long, and are then placed by the mother in the pouch on the front of her abdomen within which lie the nipples. The young kangaroo attaches itself by its mouth to the nipple, and remains in the pouch until it is fully developed.

Of course, all mammals, in common with birds, reptiles, amphibia, and indeed the vast majority of living things, produce eggs within which their young develop. The only difference is that in the placental mammals the egg hatches out inside the mother and does not possess a hard shell. The human infant, for example, develops within a membrane which resembles a cellophane bag filled with fluid in which the infant floats, and when we read of a baby being born in a "caul" this means that the bag did not rupture before birth as is usually the case. The child, in fact, was born in an egg-shell. Both birds and reptiles lay eggs upon land where they need protection, therefore they usually have a hard, or at any rate a leathery, shell; in the case of birds the egg needs to be kept warm by the parent's body and the offspring has to be fed, but reptiles usually live in hot climates and trust to the heat of the sun to hatch their eggs, after which the young are ignored. The young of reptiles are capable of looking after themselves immediately after birth, so reptiles, unlike birds, have few parental responsibilities. It is obvious, too, that all animals living upon land must reproduce themselves in such a way that fertilisation takes place within the mother's body; their mode of sexual intercourse, therefore, assumes more or less the same pattern as in the mammals. In the case of frogs and other amphibia, however, although copulation takes place with the male lying on top of the female's back and grasping her around the chest, fertilisation actually takes place just outside their bodies in the water as both simultaneously set free the male and female sex-cells.

By the time we reach the level of the fishes the possibilities of love between the sexes and parental care of the offspring become even less; for, although some fishes like the stickleback build nests which are guarded by the male, the eggs of most fishes are fertilised in the water. The female ejects the eggs at random to fall to the bottom of the pool or the ocean bed, and the male later sprays the "milt" or male sex-cells over them to produce fertilisation.

Further peculiarities of sexual reproduction

may be noted amongst the insects. In the ant, for example, the male and female go on a "nuptial flight," during which the female is fertilised; the male is short-lived, and neither male nor female use their wings on any other occasion. On this single occasion, the female takes into her body enough spermatozoa to last her for the rest of her life as a queen. As the thousands of eggs pass out of her body, some are fertilised by the sperms and others not, the fertilised eggs developing into males and females in the usual way, the non-fertilised developing into workers which are sterile or neuter females. Ants, as in the case of butterflies, bees and wasps, and other insects, pass through a complicated life-history; the eggs hatch into grubs or caterpillars, these later build cocoons or chrysalises (which are often mistakenly described by the sellers of fish-foods as "ant's eggs"), and from the cocoon arises the full-grown insect. But worker ants are not the only animals which can develop without fertilisation—even animals as high in the evolutionary scale as frogs can develop from eggs which have been specially treated in salt solution or pricked with a needle. Such individuals therefore have only one parent, the mother.

Still lower down the scale, we find that worms and snails are bisexual—that is to say, both male and female sex cells are present in the same individual. When copulation takes place, each individual fertilises the other. Finally, at the simplest levels, we have the asexual reproduction of the amoeba, which simply divides into two. Other single-celled animals, such as the slipper animalcule, paramecium, can reproduce both sexually and asexually; it may, like the amoeba, simply divide into two, or in the process known as "conjugation," two animalcules join together, mingling their substance, and then separate. From this last example, it can be seen that the significant aspect of sexual reproduction is not simply the increase of the species but rather the mingling of the genetic heritage of two individuals, with consequent possibilities of greater variation in the species. Conjugation in paramecium is not basically directed towards multiplication, but rather towards variation of the stock and regeneration of the individual.

**Respiration.**—Respiration occurs by various methods in different animal species, from the amoeba and other single-celled animals which depend upon direct absorption of oxygen dissolved in the surrounding water to the complex breathing systems of larger creatures. Worms, like amoebae and other simple creatures, absorb oxygen directly through the skin and transport it by means of hæmoglobin, which, as in man, is the oxygen-carrier of the blood. The hæmoglobin of worms, however, is dissolved in the plasma, and is not, as in the higher animals, contained in red cells. The bodies of insects are covered in a hard, horny armour made of a substance known as chitin, and they therefore cannot absorb oxygen directly as worms do. Nor is the oxygen carried in the blood stream. Instead, they have a row of apertures or spiracles along both sides of the body communicating with thin branching air-tubes which ramify throughout the system to which they supply oxygen without the intervention of the blood-stream. The oxygen is forced in and out of the body by movements of the abdominal wall similar to the breathing movements of other animals.

The breathing-apparatus of the fish has to be modified for a life in water, and, as is well known, the oxygen-containing water is taken in at the mouth and passed out at the gill-slits. Beneath the gills there are rows of filaments richly supplied with blood which absorb oxygen and discharge carbon dioxide through their thin walls. The tadpoles of frogs and other amphibia also possess gills, which at first are external, and then, like those of a fish, internal. Finally, some time before the tadpole leaves the water, the lungs develop, and it has to come to the surface in order to breathe atmospheric air. Adult frogs breathe through their nostrils, and air is forced into the lungs by contractions of the floor of the mouth (this, of course, is why the floor of a frog's mouth can be observed to move constantly up and down). But, even when fully-grown, frogs absorb additional air both through the lining of the mouth and through the damp skin.

In birds, breathing is adapted to the necessity of flying and a life of great activity. Muscular contraction of the chest wall produces expiration, not inspiration, as in the case of mammals. The lungs do not expand, and the excess of inspired air is stored in air-sacs outside the lung itself, but communicating with the lungs. When a bird breathes in, fresh air fills both lungs and air-sacs, and the oxygen is absorbed within the lungs as in mammals; on breathing out, the used air leaves the lungs, which are immediately filled with fresh air from the sacs. In the bird, therefore, both inspiration and expiration supply fresh air to the lungs—an important adaptation for such an active creature.

All these modifications of the basic processes of life are mentioned here in order to give the reader some indication of the variety and complexity of living things. We must now glance briefly at the corresponding functions in the plant world, taking as our basic example one of the higher flowering plants.

### THE LIFE OF PLANTS.

A simple classification of plants has already been given elsewhere, and a glance at this will show that there are single-celled plants just as there are single-celled animals. Amongst the most important of these are the yeasts and bacteria, both of which will be mentioned later. Algae, which form the green scum on stagnant ponds, are slightly higher in the evolutionary scale, and the other groups of non-flowering plants: seaweeds, fungi, ferns, mosses, and so on are fairly familiar to most people. Amongst flowering plants, the gymnosperms (i.e., "naked-seed" plants) are those in which the seeds are not enclosed in a fleshy fruit or seed-case—e.g., the firs, pines, and other cone-bearing trees. All the other flowering plants are described as angiosperms, for in them the seed is enclosed in a fleshy box at the base of the petals.

**The Life of Plants.**—Although plants manifest the same vital activities as animals in that they feed, breathe, move, reproduce their kind, and respond to stimuli, their general way of life is in important respects fundamentally different. Whereas animals can live only on the organic materials produced by other animals and plants, plants, with few exceptions, build up their own food from such inorganic materials as water, salts, and the carbon dioxide of the air. Water and salts are absorbed through the roots from the surrounding soil and the carbon dioxide from the air—at any rate in the case of land plants—water plants absorb the necessary gases from the surrounding water.

The method by which absorption of salts takes place is known as osmosis. This is a purely physical process based on the principle that, if two liquids of differing density are separated by a permeable membrane (e.g., a piece of parchment or pig's bladder), the denser attracts to itself the less dense. The roots of the higher plants are covered with fine root-hairs, within the cell-walls of which the sap is of a higher density than the salts dissolved in the water of the soil. The root-hairs, therefore, draw into themselves the weaker salt-solutions of the surrounding earth. However, the linings of the cell-walls are not equally permeable to all substances—they are what is described as semi-permeable membranes which allow some materials to pass and reject others. Each type of plant selects through the semi-permeable membranes of its root-hairs those substances which are most suited to itself; the absorption of salts is selective. (This, incidentally, is the reason why rotation of crops is necessary; for the constant growing of the same crop would very rapidly exhaust the soil of the particular salts it makes use of.)

Carbon dioxide from the air enters the plant by a different route. It passes into the leaves. There, with participation of the green substance chlorophyll, which assists in absorbing quanta (p. 158) of energy from sunlight, water is split up into its elements: the oxygen of water is set free while the hydrogen combines with the carbon dioxide in a manner not fully understood. That process is *photosynthesis*; it is the first of the impulses by which the almost inert carbon dioxide gas is built up into proteins, sugars, and other organic substances, some of which can be eaten and

have their carbon and hydrogen oxidised by animals. Thus the chemical cycle of life revolves around carbon: oxidised in respiration and otherwise, and reduced (combined with hydrogen) in photosynthesis and subsequent processes within the plant. These changes depend fundamentally and exactly on the elements of water.

In the process of *assimilation* or food absorption, therefore, plants take in carbon dioxide and give out oxygen. This, however, is a process distinct from *respiration* in which plants, like animals, take in oxygen and give out carbon dioxide. Respiration in both plants and animals goes on by day and night, whereas assimilation in plants occurs only under the influence of sunlight; since assimilation involves a greater exchange of gases than respiration, plants are actually giving out oxygen into the air in the hours of daylight. At night, on the other hand, when assimilation ceases, they are giving out carbon dioxide in the process of breathing. (This is why plants are removed from sickrooms at night—although the amount of carbon dioxide given out is really negligible.) All life upon earth depends upon the process of photosynthesis, without which inorganic materials could not be built up into the organic substances necessary for animal food.

Fats and proteins are, of course, also found in plants. The former are synthesised from carbohydrates, the latter, which contain sulphur and nitrogen in addition to carbon, hydrogen, and oxygen, are built up from carbohydrates and the organic salts absorbed from the roots. Since plants absorb relatively simple materials, no elaborate digestive system is necessary, nor is there much waste material left over. Excess water is got rid of by *transpiration*, a sort of sweating which takes place through minute openings or stomata on the under-surfaces of the leaves. It is through these openings, too, that carbon dioxide and oxygen enter and leave the plant in respiration and assimilation. Other waste material is got rid of by passing it into leaves which are about to be shed at Autumn or the end of the flowering season.

Stomata are closed during the night, but in the day they often excrete extraordinary amounts of water. The common birch-tree, for example, may pass out into the air anything from 15–85 gallons of water in the course of a single day—the actual amount depending partly upon the size of the tree, partly upon weather conditions and the quantity of water in the soil. Sunflowers excrete one or two pints of water daily, and for this reason are often grown in marshy soil in order to drain it.

**Plant Tissues.**—The salt-containing water which has entered the root-hairs passes by osmosis from one cell to another within the root until it finally enters the specialised tissue whose function it is to transport water. This tissue is the xylem or wood which is composed of cells which have lost their protoplasm but retained their cell-walls arranged in long, thin channels passing up the stem of the plant. Xylem is also the framework upon which the plant is supported, and in this respect it is analogous to the animal skeleton. The water is transported to the leaves, the workshops of the plant, in which salts, carbon dioxide, and water are manufactured into food-stuffs. These food materials now have to be carried throughout the rest of the plant, and this is done by the medium of the other main plant tissue, the phloem or bast. Plants differ from each other in the specific way in which xylem and phloem are arranged within their stems; in trees the wood or xylem tends to be central, and the bast lies round the edges below the bark; in herbaceous plants, on the other hand, the wood is usually at the periphery, either in an unbroken ring or as separate strands. If a cut flower is placed in a jar of water containing red ink or some other dye, sections of the stem will show the woody tissues coloured by the dye.

One of the mysteries of botany which has not yet been satisfactorily solved is the problem of how water passing up the xylem canals reaches the top of a tall tree. To some extent the pressure exerted by more water as it enters the roots must aid the upwards flow, and, on the other hand, loss of water from the upper parts by transpiration from the leaves must exert some pull, but neither of these theories are generally considered adequate to explain the observed facts.

Although plants have no nervous system such as is found in all but the simplest animals, they are, of course, capable of responding to external stimuli; for without response to stimuli to aid adjustment to the environment there can be no life. Plants respond to gravity, to light, to contact, and in a few cases to touch. For example, a plant turned upside down will slowly turn round and grow upwards once more; a seedling grows towards the light, and creepers grow their suckers on the side of the stem next to the wall, their branches and leaves on the other side facing the sun. The so-called sensitive plant has leaves which respond almost immediately to touch by drooping—apparently because the stimulus is transmitted to the base of the leaf, where there are "cushion-cells" which rapidly lose water into the surrounding spaces when the stimulus arrives. The loss of water causes the cushion to become less turgid, and hence produces drooping of the leaves. Somewhat similar, if less dramatic, are the sleep movements of those plants which close their petals for the night. We can only mention here the interesting experiments of the Indian scientist Sir J. C. Bose, who by means of very delicate instruments was able to measure the quivering and shuddering of injured plants and has also claimed that they are subject to shock and to the influence of drugs in the same way as human beings. Many of these responses and other activities of the plant are due to the hormones which, as in the case of animals, play a major part in their economy.

**Reproduction in the Higher Plants.**—Little need be said here about this subject, which to most people is fairly familiar. In the centre of a typical flower is the erect column known as the pistil, and surrounding it the more slender stamens; the former contains at its base the ovary, the latter at their tips the pollen carrying the male sex-cells. Some species carry male flowers (i.e., flowers with stamens) on one plant, female (i.e., flowers with pistils) on another; other species have male and female flowers on the one plant; and in yet others each flower carries both stamens and pistils. In the case of the date-palm, for instance, some trees are male and others female, and the male ones, of course, bear no fruit. On hazel-trees both male and female flowers grow on the same plant, and each is completely different in appearance from the other. In a buttercup, on the other hand, each single flower is both male and female. However the flowers are arranged, most species avoid self-fertilisation by various methods—for example, by ensuring that male and female elements reach maturity at different times, or, in the case where both anthers and pistils occur in the same flower, by having anthers which are too short for the pollen to reach the pistil.

Most plants are fertilised or pollinated either by insects or by the wind, and it is interesting to note that flowers which are insect-pollinated are nearly always gaily-coloured, have large petals, and are scented in order to attract the insect. Wind-pollinated flowers, on the other hand, are usually rather small, drab, and lacking in scent.

When pollen, whether wind- or insect-borne, lands upon the tip of the pistil each pollen-grain sends out a long pollen-tube which dissolves its way through the length of the pistil by secreting digestive enzymes. Finally, the pollen-tube, which carried two male sex-cells at the end, reaches the ovules in the ovary, which are thus fertilised and then become seeds. The former ovary is now described as a "fruit," in the centre of which are the seeds surrounded by the food-stuff, which, in certain species, is used for human food also.

When the seeds are ready to settle down to a separate life in the soil, it is necessary for them to be carried as far as possible away from the parent plant in order to avoid competition for soil and sunshine (this does not apply to annuals, which die down each year). Some seeds are winged in order that the wind may carry them far afield; others have hooks or burrs which adhere to the hides of cattle for the same purpose; the seed-box, as in the case of the gorse-bush, may be arranged so as to "explode" in the heat of the sun, scattering the seeds far and wide; or they may be swallowed by animals, carried in their intestinal canals, and excreted to grow elsewhere. In addition to the sexual mode of repro-

duction described above, most plants spread vegetatively by sending out shoots, and many water-plants are spread far afield when the shoots become entangled in the feet of birds which carry them from one pond to another.

**The Physiology of Other Plants.**—Some plants—indeed a very large number of them—are flowerless, and many of these flowerless plants lack chlorophyll and, therefore, are compelled to live upon organic matter as animals do. Bacteria, yeasts, and fungi are amongst the more important of these organisms, some of which live upon other living things as *parasites*, others upon dead organic matter as *saprophytes*. The bacteria are so universal and so important that they deserve far more space than is available here; for it is often forgotten that the harmful or "pathogenic" bacteria are only a relatively small group, and that most bacteria are not only harmless but necessary to man. Without bacteria to return the dead bodies of animals and plants back to the soil by a process of decay, the soil would not be fertile; for all life is a cycle in which the used-up materials, whether in the form of excreta or dead bodies, must be returned to the workshop of the earth to be utilised in building new life. Some plants, such as clovers, peas, and beans (the legumes or leguminous plants), carry little nodules upon their roots, within which bacteria furnish an additional source of combined nitrogen for protein-formation. (All plants form protein from soil-derived nitrogen, but the nodulated legumes are alone able to make protein from air-derived nitrogen.) Yet other plants obtain some of their protein from the bodies of insects which they trap upon their leaves and digest with enzymes.

The algae which form the green scum in stagnant pools are microscopic plants containing chlorophyll which, under high magnification, can be seen to take the form of long chains of green cells or single cells arranged in clumps. They reproduce both sexually and vegetatively, as do the seaweeds, which are known by the scientist as the group of thallophyta because they have no roots but attach themselves to rocks on the sea-bed by means of a sucker or thallus. As in the case of many animals which live in the water, fertilisation usually occurs by the male sex-cells being set free in the water to swim to the female. In the case of fungi, reproduction is asexual and accomplished by means of spores (these, in the case of mushrooms and toadstools, may be seen between the gills on the under-surface); spores are not seeds, since they are not fertilised but simply germinate where they land and develop into other fungi.

We noted at an earlier stage that in the course of evolution plants, like animals, only gradually

in the water. In both cases the act of fertilisation still occurs in water.

**The Mechanism of Heredity.**—The subject of heredity is a vast one, and no attempt will be made here to describe it in any detail. The most that can be attempted is to give a brief account of how characters are handed on from one generation to another—a discovery which is mainly due to the pioneer work of the Austrian monk Gregor Mendel (1822-84). Curiously enough, although Mendel was a contemporary of Charles Darwin, and had, in fact, discovered facts which would have been of the greatest use to Darwin in elaborating his theory of evolution, nothing was known of Mendel until his theory, published in obscure scientific journals, was brought to the public notice long after his death, in the early years of this century.

It had been known, of course, for many centuries that animals could be mated deliberately in order to produce offspring with the qualities desired by stock-breeders and farmers. But this process had been a haphazard one which by no means always produced the expected results. Mendel, in the garden of his monastery, was the first individual to experiment scientifically with heredity by deliberately observing the interaction of single specific characters. His most important experiments, which we shall describe here, were carried out on the ordinary garden pea, in which it is a relatively simple matter to distinguish several inherited characteristics: some seeds are round, other seeds wrinkled; some seeds are green, others yellow; some plants are tall, others dwarf. By deliberately fertilising one type of plant with the pollen of another, Mendel was able to observe how these characters were handed on.

The layman might suppose that such characters mingle to form others which are a compromise between the two—that the offspring of one tall and one short parent would be medium-sized; that green seeds crossed with yellow would result in greenish-yellow seeds. But this is not the case when we are dealing with pure characters. In his experiments Mendel first of all produced pure lines of dwarf and tall peas by constant inbreeding; these were tall and dwarf lines which bred true to type. He then crossed one with the other and found that the offspring were *all* tall; this is described as the F1 (first filial) generation. When the hybrids of the F1 generation were interbred, another generation—the F2—developed, in which tall and dwarf peas reappeared in the proportion of three tall to one dwarf; but further breeding showed that only some of these tall plants bred true and the others were hybrid. There were, in fact, two hybrid to one dwarf and one tall. This relationship is best expressed in the following diagram:

freed themselves from dependence upon water, and that the amphibia, for example, still have the need to return to the water for purposes of reproduction. Much the same is true of such plants as ferns and mosses, older in the evolutionary sense than the flowering plants, which reproduce in a particularly interesting way. On the back of a fern leaf one may observe small brown patches of spores which are often mistaken for seeds, and, when ripe, these spores (as in the case of fungi) fall to the damp soil developing not into ferns, but into a small green heart-shaped "plant" or "prothallus." On the prothallus there develop the male and female sex-organs, which, in time, produce the gametes or sex-cells, and the male gametes swim over the damp surface of the prothallus to fertilise the ova from which the adult fern develops. This method of reproduction is interesting, as is the sexual cycle of amphibia, in illustrating how these animals and plants which were the first to colonise the dry land, had, and still have, to compromise with their old way of life

As the result of his experiments Mendel deduced that all characters are transmitted from parent to offspring as separate units which are arranged in pairs of contrasting factors or allelomorphs. The gametes or sex cells can each carry only one of such pairs: tallness or dwarfness, green or yellow seed-colour, wrinkled or round, but never both of the contrasting factors together. Although Mendel did not know this at the time, these factors are carried on the genes strung along the bodies known as chromosomes within the nucleus of each cell. Every cell in the animal or plant body (with few exceptions such as the human blood-cell) has a nucleus, which when it is about to divide to give rise to another cell, breaks up into the chromosomes, which are tiny rod, comma, or globular-shaped bodies composed of many separate genes. In the ordinary cell-division by which the cells of the body multiply or replace each other, each chromosome divides down the middle, so that each daughter cell gets the same genes—that is to say, the same hereditary

material. But, since sexual reproduction implies the union of two sex-cells from separate individuals, the number of chromosomes (which is constant for any one species) would always be doubling when male and female sex-cells meet if there were not some method by which this could be avoided. When, therefore, the sex-cells are formed, the chromosomes do not divide down the middle into two equal halves; instead, half of the chromosomes go to one cell and half to another, so that each sex-cell contains only half the number contained in the body-cells. The pure-bred tall peas carried in each body-cell two factors for tallness, so that when division for the sex-cells occurred each sex-cell had one factor for tallness, and the same applied to the pure-bred dwarf peas. Hybrids, on the other hand, had in their body-cells one factor for tallness and one for dwarfness, and when division for the sex-cells occurred, some gametes were left with a unit for tallness and others with a unit for dwarfness. So, if two hybrids were crossed, the possibilities for the offspring were: tall unites with tall, tall unites with dwarf, dwarf unites with tall, and dwarf unites with dwarf. According to the laws of probability, these various possibilities will occur in the statistical order 1:2:1, or, in other words, there will be one tall and one dwarf to every two hybrids. But the hybrid offspring will always look tall, for tallness is dominant to dwarfness, which is what is known as a recessive character.

Therefore, in the F2 generation, there appeared to be three tall peas to one dwarf, although of these only one was a pure line. Of any pair of allelomorphs, according to Mendel's theory, one must be dominant and the other recessive—that is to say, when the two facts are mixed the dominant one is the one which influences the immediate result. In human beings, for example, brown eyes are always dominant to blue, and therefore two blue-eyed parents cannot have a brown-eyed child.

As we have elsewhere seen, some writers believe that evolution cannot be explained purely in terms of natural selection, which, says Professor Neville George, is a passive filter eliminating the "unfit" and then showing a bias in favour of those surviving, "... but it cannot induce structural novelties for future selection, and thus cannot initiate evolutionary lines." Novelties, according to de Vries and most modern biologists, can only arise by mutation—that is, by the drastic modifying of the genes, which occurs either spontaneously or by outside interference. It is now possible to produce mutations by means of drugs, X-rays, and so on, and some authorities have suggested that the supposedly spontaneous mutations are produced by "cosmic rays" reaching the earth from outside space. These rays have great penetrating-power, and it is quite possible that they might produce such effects upon the sex-cells of animals or plants.

### III. THE ORIGINS OF MIND AND HUMAN SOCIETY.

#### PREHISTORIC MAN.

In the last section we brought our study of life upon earth down to the period known as the Pleistocene and the four Ice Ages. It was during these ages that man, or rather his early semi-human ancestors, first appeared upon the face of the globe—somewhere about a million years ago. Now, a million years is not a long time by the standards of the universe, which are those we have so far considered, but they are a very long time relative to the time of recorded history. In order to adjust our time scale let us think for a moment in terms of millennia or thousands of years beginning with the discovery of America by Columbus half a millennium (500) years ago. From this event we should have to go farther back to one millennium, or one thousand years ago, when Alfred was King of England and the Normans had not as yet landed. Two millennia take us beyond the bounds of British history altogether; for the existence of the British Isles was known only by rumour and travellers' tales to a few educated Romans. Three millennia ago there was not even a Roman Empire, since Rome the city had not been founded; Solomon was king in Palestine, and the only literate people in the world were in Egypt. Finally, five millennia take us right back to the beginnings of written history in Babylonia and Egypt, and earlier than this no written records exist; yet this is only a two-hundredth part of the period we are considering.

Without written records we are left to deduce the record of prehistoric man from his bones, his tools, and, less frequently, from such relics of his workmanship as paintings in caves, remains of prehistoric villages, and stone circles. Of course, the earliest men built no villages, had only the simplest stone tools, and their bones have in most cases been destroyed by weather and the pressure of overlying soil, so the first traces to be found in the record of the rocks are very primitive stone tools—the so-called "eoliths" or dawn stones. Eoliths are found in many places all over the world, but some of the oldest dating from the warm Pliocene period are found in the counties of Suffolk and Norfolk. The earliest skeletal remains—those of Java and Peking man—appear to belong to the first interglacial period, the interval between the first and second Ice Ages of the Pleistocene.

In 1891 there was discovered in Java the skull and thigh-bone of a very primitive ape-man now known to science as *Pithecanthropus*. The skull is about half the size of that of a modern man with overhanging brow ridges, broad flat nose, and protruding jaws, and its owner must have looked

rather like a gorilla. Nevertheless, there can be little doubt that *Pithecanthropus* was of pre-human stock. Another relic of prehuman man was discovered about 1923 near Peking in China in the shape of several brain-cases (the upper part of the skull containing the brain) and several fragments of jaws. Peking man, or *Sinanthropus*, appears in many respects to be the most primitive, and is thought to resemble man's earliest ancestors of Pliocene days.

The original home of the human race is unknown, although it was at one time thought that India or Central Asia was a likely area, because some species of rather human-looking apes have left fossil traces there. On the other hand, Dr. Leakey has recently found traces of "ape-men" in Africa, and this is therefore another possible homeland of early man. Although, as we have seen, neither of the species we have so far mentioned was in the direct line of human descent, there is good reason for believing from a study of their skulls that *Pithecanthropus* and *Sinanthropus* could both speak.

In the second Interglacial period we find a new type of prehuman man existing in Europe who is known only by a jawbone found near Heidelberg in Germany. But although this jaw is the only skeletal relic of Heidelberg man, many of his stone tools have been found all over Europe, Africa, and India. Archaeologists identify prehistoric man for the most part by his cultural traces, his tools and weapons; such implements are known by the names of the places where they were first found, and hence we find anthropologists speaking of Chellean, Acheulean, Mousterian, Solutrean, and other cultures. (It must, of course, be remembered that, strictly speaking, such terms as the Old Stone Age, the New Stone Age, or the Bronze Age are not to be thought of as absolute periods of time like those used by geologists. On the contrary, in such places as Central Australia or parts of Alaska the Old Stone Age exists today. But, says Professor Gordon Childe, "in any one locality—say Southern England or Egypt—each age does indeed occupy a definite period of historical time. And in all regions the several ages follow one another in the same order.") Heidelberg man belonged to a culture known as Chellean, and probably lived in the open throughout the flint-bearing areas (for it was from flint that most of his tools were made), moving from place to place in small family groups as the flint supply or the herds of bison or deer became exhausted.

At some time during the third Interglacial

Period, men of the so-called Acheulian culture discovered the use of fire, and it was about this time, too, that a new type of prehuman species known as Neanderthal man—the first race of which really plentiful skeletal traces have been found—arrived in Europe. These primitive and rather brutish creatures must have been saved from the worst rigours of the Fourth Ice Age only by their fires, their skin clothing made from hides, and their ability as hunters. Neanderthal man belonged to the Mousterian culture, and must have been the first near-human species to bury the dead ceremonially. Skeletons have been found lying in shallow graves, with flint weapons and food by their side to stay their hunger should they awake. Did Neanderthal man confuse death with sleep, or did he believe in an after-life? Nobody knows.

**Homo Sapiens.**—When Neanderthal man disappeared from the face of the earth, a significant chapter in pre-history came to a close; for the new types of men who succeeded him were vastly different—they were, in fact, the first true men, the first holders of the name *homo sapiens*. Whereas the Neanderthals were heavy slouching ape-like dwarfs, the new races the Cro-Magnon and Grimaldi peoples, were clearly human. The former somewhat resembled the modern North American Indians in physical type, while the latter were negroid like the modern African Bushman. It is possible that the Cro-Magnon men came into Europe from the East and North, whilst the Grimaldi people came from Africa or somewhere in the South, but, however this may be, they first appear in the record of pre-history about thirty thousand years ago. This earliest truly human culture is known as the Aurignacian, and it is here that we find the first beginnings of art; for in caves in the Pyrenees there still exist paintings of bison, deer, and horses so modern in appearance that their discoverer was accused of forging them himself when they were first observed in the early years of this century. Little statuettes of bone or stone were also found, and it is probable that these first manifestations of art were utilised in magical ceremonies for producing success in the hunt or fertility in women.

It would take too long to discuss the Eskimo-like culture of the Magdalenians with their bone harpoons, who probably lived mostly upon fish; the beautiful flint tools of the Solutreans; or the relatively degenerate cultures of the Azilians and Tardenoisians. (These, it must be remembered, are not the names of different human species, but merely different cultures of the same species.) All belong to what we now describe as the Old Stone Age or Paleolithic Age of pre-history—a period during which wood and stone were the basic materials for weapon and tool-making. Indeed, for 98% of man's history stone has been his main source of material—in addition, of course, to wood, bone, horn, and ivory. Then, about 10,000 years ago, a revolution took place which is described as the New Stone Age or Neolithic Age; for it was at this period that some men began to cultivate wheat and other plants and to breed sheep and cattle. Whereas the Paleolithic period was a time when men lived entirely on hunting, fishing, and gathering wild berries or roots or shellfish, in the Neolithic Age they began to give up wandering about in search of food supply and settled down to cultivate it for themselves. These early communities settled down for preference in the river valleys, where cultivation was easiest, and it was in the two great valleys of the Nile and the Euphrates that the first civilisations arose complete with social classes, priests, and walled cities. Civilisation as we know it spread from these areas to Europe, India, China, and finally across the Pacific to the Americas, where no traces of early man have been found. With the commencement of the Bronze Age in Egypt (about 4000 B.C.) and the later Iron Age (about 1200 B.C.) we enter the historical period.

#### THE MIND OF EARLY MAN.

Opinions differ as to how civilisation has spread; for some authorities believe that important inventions have risen spontaneously at different times in various parts of the world, whereas others (the

Diffusionists) believe that all civilisation has spread across the world from the early cultures of Egypt and Babylon. Perhaps the most reasonable supposition is that both theories are true—that civilisation as we know it is essentially derived from Egypt and Babylon, whereas many of the more primitive peoples still in existence today have evolved simpler ways of life in relative independence of the major trend.

**Intelligence.**—At this point we must clear up some misunderstandings concerning early man and primitive modern men. It is quite wrong to suppose, as many people do, that primitive people are "backward" because they are stupid in comparison with ourselves. On the contrary, mental tests have shown that there is not the slightest reason to suppose that any existing tribe or people is inherently intellectually or physically superior to any other, and, so far as prehistoric men are concerned, there is good reason to believe that from Cro-Magnon man onwards all races of mankind have been in no way inferior mentally to ourselves (in fact, the brain capacity of some was rather greater than that of most modern men). Psychologists have shown that intelligence is inherited, that some people are born potentially more or less clever than others, but it is necessary to remember that even the highest intelligence can develop only when it is given adequate stimulus to do so, and, that no one race or tribe has a monopoly of clever or stupid people. For example, negroes in the Southern States of America show a lower average intelligence on testing than those in the North, for the simple reason that the Southern Negroes do not have the same opportunity of developing their intelligence as those in the North. Incidentally, one of the highest intelligence-quotients ever recorded was found in a Negro girl in one of the Northern States of America.) Whether a tribe or people or race show a "high degree of culture" depends hardly at all upon biological or racial factors, but (a) upon the natural materials available to them for building up a culture, and (b) upon the extent to which they have been able to borrow from others. Let us consider these factors briefly.

#### PHYSICAL ENVIRONMENT.

It is clear that no people could enter a Bronze or Iron Age unless bronze and iron were, in fact, available in their environment. Hence the Eskimos, who have no metals available to make into weapons or ornaments, still use stone, ivory (from walrus tusks), and bone. In short, their environment does not permit a higher degree of culture. Africans and the Australian aborigines do not wear many clothes, not because they are stupid, but because in the places where they live it is more comfortable to live without clothes—indeed, the supposedly backward aborigines have kinship and religious systems so complex that the poor white man's head reels at the attempt to comprehend them. The primitive races or "backward" peoples have evolved ways of life which are often well adapted to the environments in which they live, and, after all, it is by no means self-evident that a civilisation which has devised atomic warfare, a high degree of economic frustration, and concentration camps, is a "superior" one, however we choose to define superiority. The second point, again an obvious one which is almost invariably forgotten, is that great advances are only made upon the foundations erected by others. The scientists of ancient Greece, Newton, or Copernicus could not possibly have evolved Relativity Theory, not because they were less intelligent than Einstein, but because every innovator can only progress a little beyond what he has received from his predecessors in many different lands and times. The house of science is not built top floor first, but slowly upon the bases laid by earlier thinkers. In the spheres of art, literature, and religion we can hardly speak of progress at all. The great Greek dramatists are still great, and the work of the Aurignacian painters of thousands of years ago is still lovely today. Who was the great religious genius who, extending the concept of "neighbour" beyond the mere confines of the tribe, wrote in the Book of Leviticus: "... the stranger that dwelleth with

you shall be unto you as one born among you, and thou shalt love him as thyself; for we do not know. Nor do we know who it was who first pictured a tolerant, loving, and understanding God who could take pity upon the wicked city of Nineveh and ask himself: "Should not I spare Nineveh, that great city, wherein are more than sixscore thousand persons that cannot discern between their right hand and their left hand; and also much cattle?" There are many "primitive" tribes in existence today who cannot imagine anyone beating a child; some in which suicide is unknown; and a few who have never waged war. "Civilisation" is not such a simple concept as we once supposed, and technological advance does not necessarily imply high moral standards. However, the fundamental point is that all scientists are agreed that there are no significant intellectual differences between any of the races in existence today, and that the reason why some peoples are relatively backward is either because the raw materials necessary for technological advance have been lacking in their environment, or because by a historical accident their country has been out of contact with the general flow of civilisation, so that the spread of new ideas did not reach within their boundaries. Those who are inclined to look down on the so-called backward races should remember that it is not so long ago since the British looked just as backward to the Romans as other peoples do to us today. It was Cicero who, in the first century B.C., wrote to a friend: "Do not obtain your slaves from Britain, because they are so stupid and so utterly incapable of being taught that they are not fit to form a part of your household."

Since all races and peoples are equal in potentialities, what about the problem of intermarriage between races? Is there any evidence that race mixture is bad? Briefly, the answer is that no such evidence exists; for although there may be social reasons why intermarriage is inadvisable for individuals (for example, it may be that in the existing state of society the offspring of such marriages are likely to be discriminated against), there are no biological reasons against it whatsoever. In such countries as Brazil, where Europeans, Jews, Negroes, and the native Indian population have intermarried freely for several hundred years, no untoward results have followed. "In South America," writes Dr. Oliveira Lima, "our experience of centuries has taught us that there is no real understanding except the one that comes through the fusion of races." Dr. W. E. Castle, a leading American anthropologist sums up as follows: "The sociologist who is satisfied with human society as now constituted may reasonably decry race crossing. But let him do so on social grounds only. He will wait in vain, if he waits to see mixed races vanish from any biological unfitness."

#### PATTERNS OF CULTURE.

But if inherent biological differences such as race are incapable of explaining the observed differences between, say, a Frenchman, an Englishman, and a Japanese, how can such quite real differences be explained? Or, to come nearer home, what of the differences between English, Scots, Irish, and Welsh which undoubtedly exist? What of the Celtic, Saxon, or Norman blood in which some people take such pride? Well, to begin with, the English are such a mixed "race" that it is quite impossible to pick out any pure strains; we are all mongrels, as Daniel Defoe realised when he wrote:

"Thus from a mixture of all kinds began  
That heterogeneous thing, an Englishman."

For the matter of that, we do not have to go very far back in history to see that the English character has changed a great deal. In Elizabethan times, for example, England was the most musical nation in Europe, whereas in Victorian days the Englishman's lack of musical sensitivity was a universal joke in other countries. Today many foreigners laugh at our sentimental fondness for animals, but in the seventeenth and eighteenth centuries, bull-baiting, cock-fighting, and so on were universal sports. In Elizabethan times, again, the ideal man was

gay, fond of play-going, amorous, passionate, and quarrelsome—can we recognise in this the Englishman of today? It would be wrong to suppose that no continuity of tradition exists, and doubtless there are many ways in which the Englishman of Elizabethan times, or even of Norman times, resembles the contemporary Englishman. But equally there can be no doubt that there have been fundamental changes. Why this should be so will be considered later.

Anthropologists, then, are agreed that, although it may be quite correct to speak of "national character," we cannot explain this in terms of race or heredity. The true explanation is that such traits are cultural rather than biological in origin, and, since the "culture concept" is immensely important in modern social science, we must first of all define our terms:

A *society* is a group of people who live and work together, regarding themselves as members of the group, and feeling towards it an emotion best described as "belonging."

A *culture* is the way of life followed by such a group—that is to say, its written or unwritten laws, its religious beliefs, its ideals, its art, technology, and even its pots and pans.

At an earlier stage we noted that prehistoric men are generally classified according to the cultures to which they belonged—Azilian, Magdalenian, Chellean, and so on—and here the archaeologist, who knows very little of the ideals and religious beliefs or laws of these bygone peoples is generally thinking in terms of their *material* culture. The material culture, as we have seen, includes such objects found during excavations as pots and pans, knives, weapons, needles, and ornaments. But when we talk of culture in relation to present-day peoples, although such objects are included in our definitions, we are more often thinking of the way of life of the group—its ideals, incentives, and unwritten laws. Culture is what has been described as the "cake of custom," and its importance lies in the fact that it is the cement which binds the members of a group into a living organism.

**Sub-cultures.**—It should not be thought that the word "group" necessarily refers to the national and tribal groups with which we have so far been concerned. Any semi-permanent collection of people within which the members have a sense of belonging together and possessing common beliefs and customs is a "group." All of us are members, not of one group only, but of many, and each group, however small, has a culture of its own, a way of life to which we must conform if we wish to retain group membership or, at any rate, the respect of the other members. As an example, let us take an imaginary individual with the name of George Campbell, who happens to be a Lowland Scot, a Presbyterian, a Socialist, a coal-miner working at the coal-face in a particular pit, a pigeon-fancier, and a follower of Newcastle United football team. The interesting thing is that, knowing these facts, we already know a great deal about Mr. Campbell; for we can be sure that his membership of these groups (national, religious, political, sporting, and so on) will strongly influence his behaviour. One of the serious defects of classical psychology and of much popular thought is that it failed to notice how much of the individual's day-to-day behaviour arises, not from the depths of his unconscious or from what is ordinarily described as his "character," but simply from his need to conform to the, often unwritten, rules of his membership groups. If anyone suggested to our Mr. Campbell that he was not an entirely free agent, that he was not as independent as he prides himself on being, he would, no doubt, be very annoyed. Nevertheless, this is merely a commonplace statement of fact. Campbell has all the prejudices of the Lowland Scot—he thinks that education is a "grand thing," that Roman Catholics are a dangerous and superstitious sect, that the English are a somewhat inferior nation over the Border who regrettably lack stamina and intelligence, and that money, although the root of all evil, is a good thing to have and be careful about. But, had he been born in the South of

Italy, he would have regarded education as the exclusive possession of wealthy landowners, Catholicism as the only true religion, the English would have meant little to him at all (until the last war), and his goods would be exchanged by barter rather than money. Mr. Campbell enjoys his morning porridge and bacon and eggs, but his enjoyment of them is only a prejudice learned in childhood and his opposite numbers in Africa and France enjoy locusts, frog's legs, and snails, which it has never struck him to regard as "food" at all. His grandfather might have worn a beard, but if Campbell came to work wearing one, he might find himself in difficulties; this is one of the many quite innocuous things which are "not done" in certain groups. Campbell might, on special occasions, wear a kilt, but Mr. Smith over the Border would find himself under considerable social pressure to stop doing so if he ever had the temerity to start. There is no law saying that Scots or Englishmen may not strip to the waist in a hot cinema or theatre, but they do not do so, although a miner may do so at work and other people at the seaside. In short, Mr. Campbell, like the rest of us, is for the most part a creature of custom.

**Personality and Culture.**—The influence of culture upon the members of a society is not restricted to the sort of things we have mentioned above: to food, clothing, and etiquette. It is now certain that human personality itself results in large measure from the interaction between biological inheritance and the particular culture into which the individual happens to have been born; personality is the subjective aspect of culture. Psychologists are all in agreement, whatever the nature of their other differences, that the personality is created in the first five years of life as the result of parental training, and this training, it is clear, is strongly influenced by the attitudes which society impresses upon the parents. If we take the usual analogy of the clay, the potter, and the design, then it will be seen that the newborn child (the clay) is modelled by the parents (the potter), not at random, but according to the approved pattern of a particular society (the design). Everyone, into whatever society he is born, is brought up to have specific attitudes to women or men, to sexual relations, to cleanliness, to aggressiveness, and to competition, and these attitudes are unique to each society at any given time. Most middle-class Englishmen feel that they ought to "get on" and have ambitions, that one should not strike a woman, that one ought to have a daily bath, and that it is rude to argue in public with shopkeepers, waiters, and public servants. Frenchmen and Italians have no such ambitions about arguing in public, and Americans have a much stronger desire to succeed. Such differences in national or class character may often cause difficulties through misunderstanding. For example, the average British worker attaches more importance to sticking together with his mates than to getting on, and he rather despises the middle-class attitude that one must succeed at all costs, regardless of whom one has to overcome in order to get there. Then the average American is brought up to feel that when he has made more money than someone else, he should be proud of his achievement and make no secret of his opulence, however temporary, while on the other hand the Englishman feels that it is impolite to discuss money or speak of one's achievements. Therefore to the American the Englishman is a queer, reticent, and "stodgy" individual; to the Englishman the American is noisy and boastful. Neither accusation is true—both are judging each other in terms of how they have been taught people ought to behave. Dr. Margaret Mead, investigating the problems arising from the relationships between American Servicemen and English girls during the last war, pointed out that American men are brought up to be assertive in their attitude to women, to ask for more than they expect to receive—an attitude which is perfectly understood by American women, but not by the English, who, used to a more cautious approach, take it as indicating more than was actually intended. Both sides were equally shocked at the "immorality" of the other, the Americans at the readiness of English

girls to yield, the English at the assertiveness of the Americans in sexual matters.

Although we have so far spoken of the national character of such large groups as the British, American, French, and Italians, it is obvious that when dealing with groups of this size composed of many subgroups, the resulting picture will be far from clear. Our Mr. Campbell is, to the foreigner, simply "British," but he is, as we have seen, also a Scot, a Protestant, a member of the working-class, and a miner. So, although he shows many traits which are "British" in the widest sense, he differs in obvious ways from another Britisher who was born in London, is of the middle-class, belongs to the Church of England, and works as an accountant. It is not only national, but also regional, religious, class, and occupational groups which influence personality, and there are other factors also at work which we must shortly discuss. Before doing so, however, we must mention some important researches into the relationship between personality and culture in more primitive peoples, where the picture, for various reasons, is much clearer. Primitive peoples are more suited to anthropological studies, because, in the first place, they can be separated into small tribal communities which are, for the most part, not subdivided into regional, class, or religious subgroups. Secondly, they are much less subject to social change (for reasons which will later be made clear), and have remained closely integrated, undivided, and in varying degrees static for considerable periods of time. The people belonging to these groups are not nearly so individual in their outlook as most of the people we are accustomed to; for the strongly individualist character is typically a product of the large society with many subgroups. The member of a tribal community is more at the mercy of public opinion than the member of a large industrial nation with its many subgroups within which the eccentric, the brilliant, or the perverse can find themselves at home. In the small community (and this applies even in this country to the small village community) conformity to the rules is much more strictly enforced, and, as Professor Harding has pointed out, it is the multi-group modern society which is the basis for personal freedom. As we have suggested, this is because the non-conformist in the small homogenous community is at a serious disadvantage in that he lacks the support of minority groups and courts disapproval which, in such circumstances, may be a real threat to livelihood and happiness.

**Primitive Tribes.**—Ruth Benedict and Margaret Mead carried out anthropological surveys of many primitive tribes in the South Sea Islands, New Guinea, and Central America, with results which are of the first importance to anyone who wishes to understand human nature. They show, in particular, the immense influence of cultural factors in moulding personality, and demonstrate clearly how many traits which Europeans all too readily assume to be part of basic human nature are not "natural" at all. In Samoa, for example, young girls pass through adolescence without any of the "storm and stress" accepted as inevitable in the West. In New Guinea, amongst tribes living in neighbouring areas and belonging to identical racial groups, Dr. Mead found that characteristics of men and women believed to be fundamental in Europe were often radically altered. In the Arapesh tribe, both men and women are mild and gentle; in the Mundugumor, both sexes are violent and aggressive; and amongst the third tribe, the Tchambuli, the "normal" sex-attitudes are completely reversed. Tchambuli women are dominant, managing, and impersonal, whilst the men are "flighty," less responsible, and emotionally dependent. There can be little doubt that many of the traits believed by Europeans and Americans to be definitely feminine or masculine are not biologically but culturally determined. Amongst the Zuni Indians of New Mexico, Ruth Benedict found a people who were gentle, non-aggressive, and non-competitive to a degree quite unknown in industrialised countries. The Zuni try to lose races, try not to be superior to others, have nothing but contempt for those who wish

power and authority, and would have no chiefs at all were it not that certain individuals are compelled to assume chieftanship under threat of imprisonment. On the other hand, the Mundugumor of New Guinea far outdo the industrial West in competitive spirit, aggressiveness, and in their dominant attitude of "each man for himself and devil take the hindmost." The Kwakiutl Indians of Puget Sound, unlike ourselves, spend all their time giving away wealth instead of accumulating it; at their ceremonial feasts or *pottlaches* they tear up money and compete with each other as to who can burn or otherwise destroy most of their riches. The Dobu, another New Guinea tribe, are so suspicious that, were a Dobuan transported to England, he would probably be certified as suffering from persecution mania—yet this trait is "normal" within that community. In Bali, the "normal" attitude, says Dr. Roheim, is one which elsewhere would be regarded as schizophrenic; for there, "we have that unthinkable thing, a schizophrenic culture." Yet every one of these traits is acquired by the individual during childhood—and, indeed, Dr. Mead has shown how varying methods of child-rearing lead to the results observed in the adults of a culture. "Systems of child-training," writes Erik Erikson, "represent unconscious attempts at creating out of human raw material that configuration of attitudes which is (or once was) the optimum under the tribe's particular natural conditions and economic-historic necessities."

**Summary.**—From these recent observations and researches we may make the following deductions:

(1) That the culture of any society represents an attempt to adjust to a particular environment, using the word in the widest sense to imply not only the physical environment, its raw materials, and climate, but also the past traditions of the society, its technology, and so on. We can see, for example, how American history, with its background of an expanding frontier and its awareness of having escaped from the old traditionalist societies of Europe, has strongly influenced American national character. Similarly, the glorification of "free enterprise" amongst the English middle classes, and the equal and opposite insistence upon collective action amongst the working classes, are both the result of historical necessities. In the processes of bringing up families parents hand on these attitudes to their children.

(2) Human nature is more adaptable than has hitherto been thought. It is *not* "natural" to want money, to compete, to have ambitions, to be warlike, nor for that matter, to be gentle, non-aggressive, and non-competitive. Women are not naturally "feminine," maternal, and dependent, nor men "masculine," assertive, and independent. All these traits are acquired by learning and growing up in a particular culture. There is, in short, no such thing as a "fundamental human nature."

(3) Human beings have no "instincts" as is the case with animals: all one finds in the infant at birth are certain *drives or needs*—the need to eat, to drink, to excrete, to be protected from the rigours of climate, the beginnings of sexual needs, and so on. One need, however, although not strictly speaking innate, is universal because of the inevitable fact of dependency in childhood: this is the need for approval or, in the widest sense, love. As Ruth Benedict has said: "Man is a highly gregarious animal and he always wants the approval of his fellows. First, of course, he has to get the means of keeping alive, but after that he will try to get approval in forms which his society recognises. His society may recognise conquest, and he will engage in conquest; it may recognise wealth, and he will measure success by dollars and cents; it may recognise caste, and he will behave in all things according to the position to which he was born."

(4) Without socialisation, without parental upbringing, human beings could not become anything at all. There is no such thing as the "natural" individual, the "noble savage"

of Rousseau. In the few reported cases where a child has survived without any sort of attention other than receiving food and drink it has not been appreciably different from one of the higher apes. One child of eight years born of a deaf and dumb mother and reared in an attic in complete seclusion from other people, could not even appreciate sound. It had been accustomed by its mother's deafness to ignore noises, and even the loudest sound produced no reaction, although the ears were quite normal.

Most of a person's actions, therefore, are carried out either to satisfy the innate biological drives mentioned above, or to satisfy the deep-seated, universal, although probably not innate need for emotional security and approval. Men seek wealth, position, knowledge, and so on, not out of a primary desire for these things, but because they are the roads to approval within the framework of a given society.

**Individual Differences.**—Now, as we can readily observe, individuals differ quite considerably from each other, even within the same social group, so we must now consider what factors give rise to the individual variations upon the theme set by culture; several, in fact, have already been mentioned. These are, the subgroups to which the individual belongs, his status and role, and his particular upbringing and inheritance. Social change, too, gradually brings about changes in the "basic personality type" of a society, as, for example, the changes in attitude which took place between Elizabethan and Victorian times and have already been mentioned.

1. *The Influence of Subgroups* in bringing about particular attitudes in the individual has already been discussed, and need not be further elaborated here.

2. *Status and Role.*—An individual's status is his position in society, not only in respect of social class, but also in occupational, marital, professional, and other spheres. His role is the behaviour which is associated in that society with a given status. Perhaps these concepts are most simply explained if we regard social life as a sort of stage-play in which each individual is an actor in particular roles: a parson has to act as a parson, a doctor as a doctor, a father as a father, and a manager as a manager. Parsons are expected to talk and dress in a particular manner, fathers to behave in a certain way (which differs in each society), and although every parson or father is an individual in his own right, many of his acts can be understood only when we realise that he is acting in the way society expects of parsons and fathers. When people break these unwritten rules, difficulties may arise. There is no law which says that a parson may not play the saxophone, but one who did would be looked on somewhat askance by his parishioners, and, although patients sometimes complain that their physician puts on an exaggerated "bed-side manner," they are often even more distressed when he does not. Gordon Rattray Taylor tells of a factory manager who went about in a shabby old car, and who, far from being thought endearing and democratic for doing so, was regarded with disapproval by his employees, who felt that he was "letting down the side" by not behaving in a manner appropriate to his position. This is what is described as "*formal status*," since managers, parsons, fathers, and so on occupy formal positions recognised by society as at present constituted. There is also *informal status*—that is to say, the type of status allotted to individuals in a small and intimate group such as the working group in the factory. For example, we have George, who is the one who defies management and takes the lead when complaints are to be made; Alf, the one who tells dubious funny stories; Bill, the one who knows all about First Aid; and Harry, the amiable idiot who is always teased by group members but protected from the jibes of the members of other groups. All these individuals have been allotted a certain informal status, and are supposed to act "in character," although each man in another group may play a quite different role. Alf, the joker, may be henpecked at home—a sad little man; Bill, the knowledgeable First Aider, may be a very in-

significant member of the local St. John's Ambulance Brigade, to whom he may be the "silly ass"; George, the resentful, may be the kindly father. But within each group their roles are fixed and difficult to evade. Status and role, therefore, have a powerful influence upon behaviour.

3. *Differences due to Upbringing and Heredity.*—Although we have already indicated that the influence of heredity, so far as personality is concerned, has been grossly exaggerated, it does indeed play some part. What is inherited, however, is not specific behaviour but temperament, and temperamental differences, being based on glandular and structural nervous factors, are fairly permanent features of the personality. By and large, upbringing determines *what* we do, temperament *how* we do it. Hippocrates, the ancient Greek "Father of Medicine," suggested that temperaments could be divided into the choleric, the phlegmatic, the sanguine, and the melancholic, and at least one modern psychologist uses the same terminology, so we may fairly safely assume that whether a person is quick and passionate, slow and phlegmatic, quiet and pessimistic, or cheerful and hopeful in his actions these are temperamental traits which, however much they may be modified by training, are basically inherited.

But clearly the most important differences between one individual and another in the same culture arise from the vagaries of upbringing; for, even apart from such accidents of fate as the loss of one or both parents, illness in childhood, and natural calamities, the obvious fact is that no parents ever pass on the cultural design to their children without many individual variations. If we picture the cultural design as a rough mould which supplies the main outlines of the pattern, we can also picture the parents as adding individual touches of their own (whether knowingly or otherwise) to a material which already varies for biological reasons. At this point it is necessary to say something of the work of Freud, for it is he who has given us some of our closest insights into what one might describe as the microscopic anatomy of the individual personality. Unfortunately to do so is by no means easy because Freudian theory is extremely complex, and has, furthermore, been considerably modified by later writers of the psycho-analytic school. What is given here must be taken only as a very rough outline of what Freud and later psycho-analysts have been trying to say.

### FREUDIAN THEORY.

The newborn child is a young animal, with no morals or sense of reality and no "instincts" as we understand the term in the lower animals. It has only two great drives which Freud takes to be fundamental—sex and aggression. Although Freud described sex and aggression as "instincts," the word is nowadays reserved for a particular form of behaviour which, if it exists at all in man, is certainly a dying category—it should be used solely for behaviour which is inborn, relatively fixed, and automatic. Ants, bees, and wasps, for example, carry out the most detailed acts: nest-building, caring for the grubs, or food-collecting and storing; but there can be no doubt at all that none of these acts are in any way intelligent. They are based on the insect's nervous structure, and could not occur otherwise than they do. Amongst the higher animals, the birds and mammals, such instinctual behaviour comes to be increasingly modified by intelligence, but it is only in man that intelligence assumes its full significance, and all behaviour is modifiable and no longer automatic. The drives of sex and aggression in man do not involve any elaborate type of fixed behaviour pattern; they are simply the raw material of action, to be modified in many different ways as the child learns from its parents and others. Briefly, all animals in varying degrees (more so in the lower animals, less so amongst the higher) are like tram-cars moving upon fixed rails, and however complex the route they take, it is largely what has been laid down from the beginning. Human beings, on the other hand, are like motor cars, which, although making use of the same source of energy as the animals, can utilise it to drive where they please.

Freud used the word sex in a rather specialised sense to apply, not only to sexual behaviour in the ordinary meaning of the word, but also to such behaviour as eating and drinking, excretion, and, at a higher level to love and friendship. It might almost be said that in Freudian terminology sex and aggression are words used to describe the two poles of desire, positive (love, lust, hunger, longing, wanting) and negative (hating, fearing, avoiding, killing, getting rid of things).

The problem of society is to modify this primitive creature which can only need and desire, hate or fear, want pleasure and avoid pain, into a civilised being, and this is the problem it delegates to the parents, who, in the long run, utilise the child's need for security or protection and care to compel it to act in approved ways. The baby learns by imitation, by trial and error, by punishment or the threat of punishment, by love or fear of the loss of love, to conform more or less to social standards. The primitive aspect of the mind, which includes not only the innate drives of sex and aggression but also all those thoughts and emotions which, in the course of development, the individual comes to accept as forbidden, is described as the Id, and just because it contains this sort of material, thoughts and emotions within it become or remain unconscious. When the infant is born, its mind is all Id, but sooner or later the child is confronted by stern reality when it comes to realise that desires are not satisfied automatically. Sometimes it is hungry and food is not forthcoming, sometimes it is wet and uncomfortable and has to wait to be "changed"—all these events occur even to the most fortunate baby. So a part of the mind comes to be separated off from the primitive Id, whose function it is to deal with reality, and this part is known as the Ego—the conscious mind as we know it in adult life. The basic function of the Ego is to deal with life as it really is, not as we should like it to be. Still later, perhaps about the age of three or four, the child is faced by another problem; for it has to start conforming to the ethical dictates of society, to what is ordinarily described as the moral code. It has to learn what is done and what must not be done, and so a further division in the mind takes place and part of the mind begins to specialise in moral control. This part is known as the Superego. The Superego arises in two distinct stages—firstly, the child comes to realise that, under penalty of punishment or disapproval, it must obey its parents; at this stage, then, compulsion comes from outside. Later, however, the child by a process of what Freud describes as "introjection" takes the parental standards within itself. One part of the mind, as it were, plays the role of the moral parent in relation to the rest. This is the fully-fledged Superego.

An individual's character is the result of a three-cornered struggle between the primitive biological drives (represented by the Id), the hard facts of reality (represented by the Ego), and the moral dictates of society (represented by the Superego). The Superego is the censor which forbids thoughts or actions not allowed by society or, more accurately, thoughts or actions which were forbidden by the parents in early childhood. As one writer says, the Superego is a sort of psychological gyroscope which places control within the mind and avoids, in varying degrees, the need for outward compulsion. When the dictates of the Superego are transgressed the individual has a sense of guilt and feels himself, more or less a social outcast.

But the primitive drives are very powerful and cannot be totally repressed—they demand some sort of outlet, and are given it on condition that they are suitably modified or appear in socially acceptable forms or at least at socially acceptable times. Most societies, for example, permit the expression of primitive emotion at certain periods or under certain conditions; the sexual drive is permitted expression in marriage, and naked aggression in warfare. But more often the drives have to be modified by one or other of two fundamental mechanisms known as reaction formation and sublimation. In the case of reaction formation the energy of the forbidden impulse is utilised in emphasising its opposite; it is as if the individual were saying: "Of course I don't have such wicked desires—you can see I

am quite another sort of person." Perhaps this mechanism will become clearer if we give some examples.

(1) Even the layman is aware that people who are excessively puritanical are frequently by their very puritanism demonstrating quite the contrary aspects of their character. We laugh at the elderly lady who is afraid of finding a man under her bed precisely because we are aware, consciously or unconsciously, that she would not have the fear if she did not also have the hope. Similarly, when we read in the papers of a gentleman who so disapproves of obscene books or magazines that he buys hundreds of them to find out whether they are suitable or not for others to read, we may suspect that his own motives are not entirely devoid of suspicion. In short, the character-trait of puritanism is sometimes a reaction formation against strong sexual desires; the individual is fighting in the outer world the very problem he is unable to deal with in his own mind.

(2) The above examples are fairly obvious to the normal individual, who has little difficulty in observing them in his own surroundings, but it is less often realised that aggression may be modified in the same way. Some people, in other words, are compulsively gentle, non-assertive, and disposed to hate cruelty precisely because they are so full of aggression themselves. (This does not mean to imply that there are no genuinely pure or gentle people, but merely that many supposedly pure and gentle people are really quite the opposite.) When, for example, someone tells us that he would flog a man who illtreats a horse, it is obvious that, whatever else he may be, he is not basically gentle. This is an extremely important problem; for if gentleness and kindness sometimes arise, not from a genuine love of all living things, but from fear of one's own aggressiveness, then sooner or later the real motive will become evident.

The second method of dealing with primitive impulses is by sublimation—that is to say, by making them socially useful. A butcher, a surgeon, or a prize-fighter are all expressing in modified form their latent sadism, but in a way which is recognised by society. Women who have wanted children and failed to have them may become teachers, helpers in nursery schools, and so on in a valuable attempt to satisfy a frustrated need. If Freud is correct, the frustrated sexual curiosity of childhood may later take the form of a desire to know, causing the individual to become a scientist or a bookworm. Art, sculpture, and painting may all be sublimations of the infant's natural dirtiness and pleasure in messing about with mud, water, or even its own excretions. The reader may or may not accept these latter assumptions, but it is only fair to say that those who are in a position to know have found a great deal to support Freud's theories.

**Mental Mechanisms.**—Even in adult life the individual's adjustment to reality—the "hard facts of life"—and to moral problems is never complete, and self-deception is common. In this connection Freud described various mental mechanisms which even those who do not accept the Freudian theory in its entirety have found valuable in understanding human behaviour. We will conclude, therefore, by describing some of these forms of self-deception here and giving examples of their influence upon human behaviour.

1. **Displacement.**—An emotion, when conditions do not permit its being directed towards a particular object, may be directed against another which originally had nothing to do with it. "Love on the rebound" is an example of this in which, when the original object of love has disappeared, another is quickly found, not because of any real qualities possessed by the new object, but rather because the emotion demands some outlet. Aggression, too, is very often displaced; for instance, an employee, angered by his foreman or boss, but unable for obvious reasons to retort in kind, may quarrel with his wife over some triviality when he gets home. In Nazi Germany Hitler permitted the displacement of economic and other resentments felt by the Germans after the Treaty of Versailles on to the Jews and Communists, who were thus made scapegoats for the convenience of the Nazi party. It is important

to understand that this is one of the commonest types of mental mechanism which is universally, although unconsciously, used by us all.

2. **Projection.**—This is an example of a mechanism which has already been demonstrated. In brief, it means the tendency to project the objectionable qualities we refuse to recognise in ourselves upon others. "It is not I but he who is thinking and doing these wicked things." Thus, as we have seen, people who will not admit to their own impure thoughts accuse others of possessing them; those who are aggressive believe that everybody else but themselves are aggressive; the greedy accuse others of greed, and so on. Carried to an extreme degree, this is the mechanism behind persecution mania or paranoia, as the psychiatrist calls it. Projection is another very important trick of the mind, and its social effects are often all too evident.

3. **Compensation.**—Alfred Adler, one of Freud's pupils who later founded a separate system of psychology, was the first to draw attention to this important mechanism. Briefly, Adler pointed out that those who suffer from a deep-seated sense of inferiority (whether due to physical or mental defects or to lack of affection in childhood) have a strong tendency to compensate for this either by overcoming the actual defect or by becoming superior in some other field. Wherever we look we can see examples of this mechanism; Sandow the strong man and many other athletes have been puny and weak in childhood, many individuals with speech defects have made themselves into great orators, many musicians or composers (Beethoven, for example) have been deaf, and many famous painters have had defective eyesight. These forms of compensation are harmless and even useful, but it is quite otherwise in those cases where inferior individuals try to obtain superiority by gaining power over others. It is significant that Hitler, Mussolini, Napoleon, and many other delinquent types who have made a nuisance of themselves to a long-suffering world, were all men of below normal stature who felt their inferiority keenly. Another interesting observation is the fact that many of those who have attained eminence in a particular nation have not been members of the nation they aspired to rule or fight for, but were members of what was regarded as an inferior national group. Napoleon was, of course, an Italian born in Corsica; Hitler, an Austrian born at Braunau near the German frontier; Stalin, a Georgian; a large number of English generals, Irish or Scots; de Valera, an American, and so on. The significant thing about power-seekers is that they naturally tend to go where power rests; hence we find many of them becoming turncoats in a crisis. William Joyce, better known as "Lord Haw-haw," was an Irishman whose early passion in youth was to be a loyal Englishman and an officer in the British Army; when he felt himself rejected he turned to the Germans, who were ready to accept his services as a traitor. Not a few working-class politicians have, as they progressed up the social tree, become more and more conservative in their outlook; Saul the persecutor of Christians became Paul the Christian leader, and Mussolini the socialist, a fascist. In a free society one of the problems we have seriously to consider is the possibility that those who win in the scramble for power tend to be those unbalanced people who need it because of their power-loving drive based upon an inferiority complex.

4. **Rationalisation.**—This, as Bradley said of philosophy, is "the giving of bad reasons for what we do upon impulse." Nowadays, for example, nobody ever goes to war in order to kill a lot of people or take their country from them; they go to war for the other nation's own good—because they want to help them. Criminals are hanged, not because we as citizens are at a primitive stage of development which still demands "an eye for an eye and a tooth for a tooth," but because "hanging prevents further crimes" (of course, there is excellent evidence to show that it does not). Rationalisation is too familiar to most of us to need further discussion.

5. **Conversion.**—This is the mechanism which most people find it least easy to understand. Whereas the other mechanisms are, in their milder forms at least, almost normal, conversion

is always abnormal, and implies more or less serious disturbance of the mind. There are two types of conversion: hysterical and psychosomatic. In the first case, a state of mental conflict produces symptoms of physical disorder which, however, are not due to any underlying physical disease. Such cases may show symptoms of blindness, deafness, complete or partial paralysis of the limbs, double personality, or loss of memory, all of which can be shown to be purely psychological in origin, and, in fact, occur because the individual in some sense does not want to be able to walk, see, hear, or remember. In short, the symptom occurs because it gets the individual out of some difficulty which he is facing at that particular period. A very simple example of this is the so-called "writer's cramp," in which someone whose job depends upon his ability to write, suddenly finds that he cannot write at all; whenever he attempts to do so, his hand muscles go into a state of spasm. An actual case of this sort which shows the underlying mechanism may be quoted from Dr. J. A. C. Brown's *The Distressed Mind*: "A spoilt 'mother's darling' of a man was working as a clerk in a recruiting office before the war. He had got the job with difficulty and was the only support of his mother. In the office were several N.C.O.s who shocked him constantly by their obscenity. He hated the work, and yet felt that it would be unfair to his mother to give it up. One day he found that his hand would not work and whenever he tried to write, it went into painful cramp and the muscles became rigid. He had solved his conflict by falling ill, as he could then evade his work and, at the same time, feel he had done his duty to his mother. He was, of course, unaware of the cause of his trouble." Such cases are (although this is somewhat of an over-simplification) a sort of unconscious malingerer in which the individual solves a mental conflict by developing symptoms which remove him from the difficulty, at least temporarily. Again, a neglected wife who feels herself starved of affection may develop a vague and unspecified sickness which takes her to bed, there to be fussed over and given the attention which she had lacked when behaving normally. Such people, of course, really feel the symptoms they complain of, and their blindness, lameness, and so on are just as much "there" as they would be in a hypnotised person; in fact, it is not incorrect to say that such people are self-hypnotised. They certainly require psychological treatment.

6. *Psychosomatic Conversion*.—Psychosomatic conversion is a very different state of affairs; for, whereas the cases we have so far discussed have been those who had lost the will, and thus the ability, to carry out certain physical or mental functions, people with psychosomatic disorders suffer from actual physical disease as a direct result of mental stress. Within their bodies actual physical damage has resulted from prolonged exposure to emotional tensions. Elsewhere something has been said about the autonomic nervous system which prepares the organism for relaxation or emergency, and we saw that, when one of the higher vertebrates finds itself in a threatening situation the sympathetic division of the autonomic nervous system is stimulated, producing changes which are useful in flight or fight. For example, extra sugar secreted into the blood-stream from the stores in the liver is necessary for the fighting or escaping animal as emergency fuel; removal of blood from the internal organs to the muscles, a rise in blood-pressure, and cessation of digestion are similarly useful; and dilated pupils, erect hair on the back of the neck (in dogs and cats, for instance), or tense muscles all serve various functions in aiding clear vision, scaring the enemy, and preparing for blows or for running. But human beings differ from animals, (a) in that they are scared or made angry by things which are no real danger to life but only to self-respect (e.g., sitting an examination, snubs, or imagined insults), and (b) in that, unlike animals for whom out of sight is out of mind, man is cursed with imagination and memory which keep his emotions alive for long periods of time. In this way it happens that bodily changes produced by sympathetic stimulation in a time of crisis may continue, not for minutes, but for years. The frustrated worker, hating his job and resenting his boss, has the

raised blood-pressure normal to the angry animal; but it continues day in and day out until his arteries become thickened and the pressure can no longer return to normal. The ambitious business-man, mentally on the attack for years at a time perpetuates the associated physical changes normal to an attitude of attack; his stomach-wall is drained of proper blood-supply and the digestive juices, ordinarily neutralised by anti-enzymes in the blood, digest the lining of the stomach itself, causing an ulcer. Chronic states of anxiety or excitement may cause the thyroid gland perpetually to overact, leading to exophthalmic goitre. Muscle tensions appropriate to aggressive attitudes when prolonged may in others lead to fibrositis and rheumatoid arthritis. The changes produced by emotional states in the skin may cause skin disease, and migraine, asthma, angina pectoris, and coronary thrombosis are other diseases of varying degrees of severity due basically to fear, insecurity, and hate. Of course, what has been said here is inevitably over-simplified; for no disease is due to a single cause, nor is it at all clear why one patient gets one type of psychosomatic disease and a second another. But there can be no doubt that the outlook in medicine has become revolutionised by these discoveries, and can never return to the old mechanistic views of the nineteenth century. In summary, this is how views have altered:

(a) To a considerable extent we must discard the old view that sickness is always something that happens to an unsuspecting individual, like being hit on the head by a falling slate. Patients usually go to a doctor in much the same frame of mind as they would go to a watch-maker—"Here, there's something wrong with this watch—what are you going to do about it?" But from now on it has to be realised that the patient and the illness are one, that it is because he is the sort of person he is that he has become ill in a particular way. It is quite literally true that today we are entering a stage in the development of medicine which will look on crime as social or mental sickness and much disease as the result of the individual's wrong attitude to life.

(b) There are, of course, diseases in which psychological factors are at a minimum so far as causation is concerned, although psychological factors always play a major part in determining the course of the disease. Smallpox, malaria, cholera, natural calamities (like the slate falling on our unsuspecting head), and diseases due to malnutrition (where food has not been available) are examples of such conditions. These are the diseases which are serious problems in the more backward areas of the world, and are, on the whole, less important in the civilised areas. Psychosomatic factors, however, play a considerable part, in the case of the less-virulent infectious diseases, in determining whether the patient succumbs to the infection or not. For example, Dr. Wittkower has shown that psychological factors play a large part in determining resistance to tuberculosis and the subsequent course of the disease. Sir William Osler, the great physician, used to say of tuberculosis that what the patient has in his head is more important than what he has in his chest. The psychosomatic diseases already mentioned and the neuroses are, of course, examples in which the psychological factor is at a maximum.

(c) Fear and hate or anxiety not only cause unhappiness but also sickness and death. Hate and fear can kill.

(d) The psychosomatic diseases and the mental disorders generally are social diseases. They are strongly influenced by the stress of modern life and are on the increase. The present position is that, as Dr. J. L. Halliday has shown in his *Psychosocial Medicine*, although such diseases as smallpox, typhoid, rickets, the conditions due to dirt, faulty hygiene, and malnutrition, are well on the way to disappearing in the more advanced communities, in these very same communities the rate of neurosis, gastric and duodenal ulcer, heart disease, glandular diseases, high blood-pressure, suicide, infertility, and delinquency is going rapidly up. It is not only going up, but the diseases are attacking younger and younger people in each generation. As an example showing the relationship between social stress and psychosomatic disease, we might point to high blood-pressure, which is even more frequent amongst the Negro population of the

United States than amongst the Whites (who have probably the highest rate in the world), whereas primitive Negro tribes in Africa do not suffer from this condition at all.

(e) Finally, mention must be made of the body-mind problem which these observations bring to the fore. Ultimately, of course, this problem is a philosophical one which cannot be decided by observation or experiment, but today psychologists and doctors are inclined to make use of the working hypothesis that body and mind are one—that "mind" is only a useful word to refer to certain processes occurring in the body. Curiously enough, it was the mechanistic outlook of science which necessitated the hypothesis of a separate mind; for, if we begin by assuming that the body is a machine (which it is not), then we require some explanation for the fact that it sometimes acts as if it were something else. It must be realised that living things are not dead matter *plus* something else—they are simply living things with their own laws which cannot be described in the same terminology as those of physics and chemistry. Each of the spheres we have discussed—the inorganic, the biological, and the social, have their own laws, and one cannot be fully described in terms of the other. Scientists have discarded the mechanistic view, which implied that the whole was nothing but the sum of its parts and that we could best know the whole by studying each of the parts separately and then adding up our impressions, but they have not necessarily discarded materialism. This, however, will be discussed at a later stage.

### SOCIAL CHANGE.

We have already seen that the culture of a society—that is to say, its way of life—results from the interaction of many different influences. The physical environment obviously plays a considerable part and when we consider the differences between tribes living in hot, and those living in cold, climates, it is evident that, to some extent, their way of life is a form of adaptation to the physical surroundings. A second factor is the past traditions of the tribe; as we saw in the case of the New Guinea tribes, societies can live in the same surroundings and be of the same stock biologically, and yet differ widely in their usages. What is different is the past history and traditions of the tribes. Similarly, we can see that many industrialised countries at the same level of material culture and living in very similar environmental conditions, can vary considerably in their outlook on life. But here we have to ask ourselves the important question: what brings about cultural change? Why, for instance, did the Englishmen of mediaeval times differ so greatly in their culture from the Victorian or present-day ones? Many sociologists believe that new technical developments (inventions) have played a major part in initiating social change, and in the case of Europe perhaps the most important factor has been the discovery of the steam-engine.

**Mediaeval Culture.**—Society in the Middle Ages in Europe was relatively static, so that there was less change in two centuries than in twenty years in our own times. People lived in small village communities, and in their whole lives might never move more than five or ten miles from the place where they were born. They lived on the land, and their main sources of power were wind and water. Under such circumstances, industry, for the most part, was on a very small scale, and was carried out in the home of the craftsman, who was aided by his apprentices. Society was arranged in a hierarchy, with the king at the top, then the barons and lords, then the priests, the merchants, the soldiers, and the commoners; each individual was born into a certain level of society, and there he was destined to stay (although in the priesthood some promotion did occur). Learning was something one acquired from the books of the great writers of the past, and especially the great Greek and Roman writers and the Fathers of the Church; astronomy, medicine, and biology, not to mention philosophy and theology, were learned from these authorities, and nobody ever thought of studying nature itself to verify the conclusions reached by Plato and Aristotle 1,500 years earlier. Yet within this hierarchy there was a certain spirit

of democracy—for men were regarded as equal in the eyes of God, and the usual analogy by which the state was described was that of the human body, in which each part has a function to play in relation to the whole. In economic affairs usury was forbidden (i.e., the lending of money for interest), and the price of goods was determined by what was known as the "just price"—that is to say, a price which seemed to bear some relation to the intrinsic value of the goods. Poverty was regarded as inevitable, but, so far from feeling that the poor should be ashamed of their state, it was thought that the poor were especially close to God. It should not be supposed that the Middle Ages were as ideal as some writers, such as Belloc and Chesterton, have made out—there was dirt, malnutrition, plagues, and discomfort; but there was also great literature, great architecture, and great philosophy. Above all, people living in these small communities could feel that sense of belonging which we have seen to be so important. Families were large, grandparents lived as an integral part of the household, and illegitimate children (then more kindly called "natural" children) were looked after along with the rest. The Church and those who were better-off took care of the poorer, for charity was a religious duty. There was, in fact, during the early Middle Ages, no such thing as a Poor Law—partly, at least, because it was unnecessary.

**The Influence of the Steam-engine in England.**—The steam-engine has really quite a long history, beginning with the very elementary type devised by Hero of Alexandria several hundred years B.C. But in a form which was capable of being put to practical use, it dates from Watt's invention in the middle of the eighteenth century. To begin with, the use of the steam-engine as a source of power had five implications: (1) that the use of manpower was increasingly superseded by the use of steam power, and, of course, water and wind-power were gradually given up; (2) that wood was no longer used as a fuel, and less and less as a construction material; (3) that industry tended to congregate where there was an adequate coal supply, namely, in the North and West of England; (4) that goods began to be produced in ever-increasing quantities; (5) that men and women were required to tend the machines and to do work in which craftsmanship was of little importance, and large numbers of workers were needed. A steam-engine and the rest of the equipment necessary to start a factory were expensive both to buy and to run, and individual ownership had to give way to joint-stock companies managing large amounts of capital. In these ways there arose the "dark satanic mills" situated mainly in the coal-bearing North, and craftsmen and agricultural workers from the "deserted villages," such as the one described by Goldsmith, flocked to the new towns, there to live under conditions of incredible filth, disease, and misery. This, of course, was the beginning of what we now know as the Industrial Revolution.

**Psychological Changes.**—The vast majority of sociologists have taken the view that social change in the psychological and moral spheres is based upon changes in the material culture due to inventions and discoveries which alter the character of the powers of production. These inventions may reach a society by spread from another culture or by the scientific discoveries of its own men of science. What, in effect, this theory implies is the following: (1) the most important thing to a society is its means of livelihood and its methods of production; (2) it will, therefore, tend to organise its social structure around its means of production, and its most important men will be those expert in that field; (3) it will also tend to organise its thoughts and even its religion and philosophy and science with a bias in favour of the outlook of its most important men—those who own the means of production.

Wherever modern industry goes, it modifies the existing institutions of a society and brings about social change, just as it did in our own country. In China the large peasant family is gradually disappearing as industry spreads, in India the caste system is breaking down (since one cannot bother about caste differences at a factory bench), the other-worldly religions like Buddhism come to mean less, the birth-rate gradually (if too slowly)

goes down, the growing cities resulting from industrial expansion necessitate the giving-up of traditional attitudes in many things, notably in the field of hygiene and public health. It is, therefore, primarily invention and the spread of inventions that brings about social change.

**The Theory of Cultural Lag.**—Dr. W. F. Ogburn of the University of Chicago has made a special study of the technological basis of social change and has pointed out two facts which are of primary importance in understanding modern problems. First, there is the fact that, once social change has begun, it goes on at an ever-accelerating rate; each generation learns more, and invents more, than the preceding one because they have more facts and discoveries to work on. A Greek in the third century B.C. could have dreamed of making steam do work, and as we have seen, Hero of Alexandria invented a very simple engine but in order to make an engine that would really work he would have had to invent by himself: the wheel, the piston, the blast-furnace to produce the temperature necessary for melting and casting iron, the water-wheel to produce the mechanical blast, and so on. All modern discoveries and inventions depend upon pre-existing inventions and discoveries, and therefore the more inventions a society possesses, the more it can make in the future. This is why progress in the technical field goes on at an ever-increasing speed.

Now we have noted that social change occurs in three stages: (1) men produce new inventions; (2) these inventions influence human behaviour; and (3) finally, social institutions and beliefs are changed to allow for the new inventions. Recently, for example, a sociologist has shown how in Italy the production at a reasonable price of the "motor-scooter" devised during the war to be dropped in parachute landings has revolutionised the life of the peasants in the areas distant from the large cities. The scooters are cheap enough for the peasants to buy (as motor-cars are not) so that they can now easily travel into the towns from which they were formerly isolated, where they come into contact with city life with the cinema, books, modern "comics" and so on—new ideas which shatter their once simple beliefs. Similarly, the motor car in other countries brought distant places close, revolutionised sexual morals, produced ribbon development, brought about the spread of housing estates beyond the original boundaries of the large cities, led to an entirely new problem as mounting casualty lists resulted from the use of a new machine upon old roads intended for horse traffic. Dr. Ogburn points out that there is always a "cultural lag" between stages (1) and (3), and that this is the cause of many of our modern difficulties. We have vehicles travelling at fifty or more miles an hour on roads intended for horse-traffic, and the daily papers talking of the importance of "private enterprise" and free competition when these have long ago become an impossibility—not because of the spread of "socialism," but because businessmen found "private enterprise" and unrestricted competition so unpleasant that they began to form combines and trusts precisely in order to avoid it. In short, the old ways of thinking tend to persist long after the situation which was their justification has changed.

#### SOCIAL AND PSYCHOLOGICAL PROBLEMS OF MODERN LIFE.

**1. Insecurity.**—The principal reasons for the psychological insecurity felt by many people today (and also, of course, for the current emphasis upon economic security) arise essentially out of the way of life which displaced the peasant society in mediæval times. Mediæval society was, as we have seen, closely integrated; each man knew how he should behave and what were his duties and obligations. The earth was the centre of the universe, heaven was above and hell beneath, and through the medium of the Church he knew exactly what he had to do—the world, in a word, was *comprehensible*. In relation to his fellow-men things were equally clear: "Not only civil authority, but God in heaven, had ordained that one be a butcher, a baker, a candlestick-maker, or a villain or serf. From the earliest days of life the individual knew where he stood; he had the security of firm group membership. His father and mother, brothers and sisters, would

move neither up, nor down, nor away from him, and the bottom could not drop out of his own world. He had many obligations, but his own rights were likewise well defined. But with vertical mobility came the opportunity not only to rise but to fall, the dispersion of families to seek new adventures in other parts of the world, the loss of group-membership status, and the uncertain compensation offered by a chance to make an individual name for oneself" (Gardner Murphy, *Personality*). By basing its structure upon competition, or, at any rate, upon unrestricted competition, the new way of life cut the individual off from society and set him upon his own two feet; he was now fighting for himself and had to regard the rest of mankind as potential enemies or competitors. The rise of capitalism led to the rise of the isolated individual.

**2. Loss of Social Control.**—Modern industry demands greater mobility of labour, and modern inventions have made transport cheap and speedy. The small permanent village community of people bound together by primary relationships (whether of love or friendship, resentment or dislike) is therefore broken up, and people become increasingly "rootless." It is as easy for a West Indian worker to come to Britain as it once was for a Scot to move to London. Now, an individual's moral behaviour is controlled: (a) by the Superego or conscience acquired in childhood, which is not always effective, partly because it is concerned only with the more fundamental matters, and also because of parental defects in upbringing; (b) by the social control of the groups to which the individual belongs—in short, by fear of the opinions or ridicule of others. Amongst the vast majority of people (b) is much more important than (a) in controlling behaviour. But when people are scattered far and wide, living amongst strangers, the small face-to-face group no longer influences their actions, and their conduct tends to deteriorate; in fact, not only morals but also mental health is strongly influenced by membership of small groups, and in the absence of such membership neurosis becomes more probable. This is why groups of immigrants from other countries present a social problem quite other than the superficial ones which usually cause concern; torn between the old standards which they are rapidly losing, and not yet indoctrinated with the ways of their adopted country, such people are likely to find themselves in difficulties.

**3. Social Conflicts.**—Society itself, so far from being all of a piece, is riddled with irreconcilable conflicts. One government will encourage "private enterprise," and the succeeding one cheerfully announce that people who engage in private enterprise are scoundrels. We are taught by religion (in the case of America it is stated in the constitution) that "all men are equal," and yet we persecute Negroes and Jews. We are told to "love one another" and in the same voice to "never give a sucker an even break." We stimulate ambition and yet live in a state of affairs in which promotion is increasingly improbable; for example, about thirty years ago it was quite possible (if not as common as might be supposed) for an employee to work his way from the shop-floor to the board of directors. Now, such jobs are increasingly filled by university graduates who have had little to do with manual work. Even in America, once the land of hope, the social classes are tending to become fixed and promotion less likely than before. The cinema depicts people living lives of luxury as a natural state of affairs, and yet we expect people to be uninfluenced by such experiences. An eminent sociologist has pointed out that gambling is the result of stimulating people's desires to achieve wealth whilst failing to devise legitimate means of obtaining it. It is almost always forgotten that frustration is a relative concept—that people are frustrated, not in some absolute sense, but in relation to what they have been led to expect. Thus, miserable as is the lot of many peasants in Asia and elsewhere, they may be much happier than the senior factory manager who expected to be taken on to the board and was passed over. Material goods are important aids to happiness, but in themselves they are not enough; for almost everyone is unhappy, no matter what his possessions, if he feels that what he had is not in

accord with what he is entitled to. But what is he entitled to? The plain fact is that in spite of much talk of "fair shares" or a "fair wage," we have no idea what a man is entitled to because it is nothing but a social convention that a doctor should be paid more than a miner, and the old social conventions of this sort, good or bad, have disintegrated.

4. **Racial Conflicts.**—It need hardly be pointed out that this is an increasingly difficult problem which cannot be solved by asserting, no matter how often, that there are no superior races or nations. The real dilemma of such a country as South Africa should not be underestimated, however it may be oversimplified on both sides of the fence; for the fact is that in such a country there are only two possibilities, both of which would lead to equally unpleasant results for the White minority in power. Either (1) they hold the Black peoples down, in which case there will sooner or later be bloody rebellion, or (2) they give the Black peoples equal parliamentary rights, in which case, since the Blacks vastly outnumber the Whites, the ruling minority automatically hand over control to the Blacks. In justice to the White minority, it is only fair to remember that no group in history has ever willingly surrendered power, and that the problem is vastly more difficult than most people realise.

5. **The Problem of War.**—Psycho-analytic writers have always asserted that aggression is an innate drive in man, and therefore that war is inevitable. To this attitude there are three answers: (1) that, if this is so, the human race is irrevocably doomed—for with modern weapons it would be difficult to survive one war, let alone an indefinite series; (2) that it is by no means certain that aggression is innate—most modern psychologists other than psycho-analysts state that aggression is the result of frustration, from which supposition it follows that, although aggression could never be entirely removed, it can be very considerably reduced by removing frustrations as far as possible; (3) that the problem of war has really nothing to do at all with whether aggression is, or is not, innate—what matters is not *whether* we are aggressive, but what we do with our aggression, and war is not at all the most obvious means of getting rid of aggression.

At one time it was thought natural for Scotland to fight England, or, at an even earlier stage, for the various kingdoms into which England was divided, to fight each other. Now such an idea would appear fantastic—not because the Scots learned to love the English, not because morals have improved, but simply because the countries concerned became one world economically and administratively. There can be no doubt that modern discoveries and technology have made it essential for the whole earth to become one economically and administratively—not only essential but inevitable. And, given time, this will quite certainly happen, whether we are willing or not, provided, of course, that we do not blow ourselves up first. When that day comes, we need not bother about the problem of aggression, for, as we have already seen, there are more than enough evils to fight and more than enough problems to tax the best brains for centuries to come, and when we have dealt with these we shall probably find that we have grown up.

6. **Religion and Science.**—In the nineteenth century religion took a good beating from science because it had rashly chosen to discuss matters of scientific fact, such as the theory of evolution. The war between religion and science is over—not, as many people seem to suppose, because one side or the other has won, nor because the new scientific theories support religious beliefs (for they certainly do not)—but rather because each has come to realise that their respective spheres of influence are largely separate. The scientist as scientist looks at the universe without emotion and as objectively as possible whereas in the sphere of religion we are concerned about how we *feel* towards it. We look on it with awe, fear, or love, as in some sense our home. "Religion," said William James, "is a feeling of being at home in the universe."

No doubt religion is also a great deal more than this, but James' statement contains a fundamental truth, and in this sense we are all religious; for

there is nobody living who is capable of regarding the universe with complete impartiality except for relatively brief periods of time, as the scientist does when carrying out an experiment. As we have seen elsewhere, one of man's deepest needs is to have a feeling of emotional security, a sense of belonging, and the consciousness of understanding his relationship to his environment. Erich Fromm, a psychologist who has made a special study of religion, describes the need we have just mentioned as the need for a "frame of orientation and devotion." Whereas Freud considered religion to be a universal neurosis based upon the need to conciliate the father-figure God—a projection of the child's view of its family into the celestial sphere—Fromm reverses this statement and tells us that, on the contrary, neurosis is a private religion. Whereas religion is a public frame of orientation and devotion, each man's neurosis is a private one; or at least, one aspect of a neurosis is the development of a private set of attitudes to life which is in conflict with those of society as a whole. Franz Kafka's novel *The Castle* is a modern parable of the neurotic's isolation from society and life which explains more about the individual's need of a frame of orientation and devotion, and the results of the lack of it than many volumes of psychology.

**Summary.**—It should be pointed out that in psychology today there are two different points of view which here we have tried to reconcile: (a) the psychoanalytic view, which holds that personality is fixed, and is determined in the first four or five years of life, and (b) the sociological view that personality, although strongly influenced by these factors, is also influenced by the roles the individual has to play and the situations he has to face in adult life. The views are not necessarily contradictory; what we have to ask ourselves is not whether this view or that, but *how much* of each view, is true. Freud largely ignored the influence of culture, firstly, because all the people he was dealing with belonged to the same culture, and, secondly, because at the time he produced his theories it was assumed that "human nature" was the same all over the world.

Nevertheless, whatever we think of Freud, the one aspect of his work which is beyond doubt is that for most of their lives people are influenced by motives which are unconscious, and of which they are completely unaware. The individual has a picture in his mind of the sort of person he supposes himself to be, and uses the mental mechanisms we have described to maintain this picture: impulses which he cannot reconcile with his ego-ideal are simply rejected. The importance of this fact is evident—for it means that rational persuasion is not nearly so potent in influencing behaviour as has often been supposed.

## THE MODERN VIEW OF MAN AND SOCIETY.

There are three types of individual who are in rebellion against society: the neurotic, the criminal, and the genius. The differences between the three are that the neurotic rebels in secret or unconsciously, the criminal openly, and the genius by his creative work is able to sublimate his conflicts in art or literature or even to change society nearer to his heart's desire. (It will be understood that this is a very loose formulation of a very complex problem.)

Now it is the modern view that such conflicts are not private and individual as has hitherto been thought (notably by Freud); for it is the conflicts latent in a particular society which are fought out in sensitive minds. Briefly each society is now regarded as a sort of electromagnetic field in which the neurotic, the criminal, and the genius are areas of high tension—in them the conflicts suffered by the society as a whole are magnified to the point of breakdown. Whereas, as was realised long ago, such diseases as cholera, typhoid, or smallpox are due to material defects of society in respect of hygiene and the application of medical knowledge, the behaviour of neurotics, criminals, and those with psychosomatic disorders is due to cultural defects of the society in the psychological sphere.

Modern psychology and sociology are showing more clearly than ever before that, in the words of Donne, "no man is an island," and that for the misery or unhappiness or badness of the few we are all responsible.

## IV. RECENT DEVELOPMENTS AND DISCOVERIES.

### ASTRONOMY.

**The Size of the Universe.**—One of the puzzles of astronomy since the development of Hubble's theory of the expanding universe has been the embarrassing fact that, when the age of the universe is calculated from its present rate of expansion, a figure of about 2,000 million years is arrived at, whereas when the age of the Earth is calculated from the evidence of radioactivity a figure of between 2,000 and 3,500 millions of years is the result. Thus we have the obviously absurd implication that the Earth is older than the universe of which it is a part. This anomaly has now been resolved by the work of Dr. Baade of the Mount Wilson and Palomar Observatories. Dr. Baade made use of the 200-in. telescope on Palomar Mountain, California to demonstrate that the method of calculating distances based upon the stars known as Cepheid variables (the yardstick for astronomical distances) is by no means infallible and that, therefore, the previous estimate of distances outside our own galaxy was incorrect. But if the estimate of distances was wrong, our estimate of the size of the universe was also wrong, and from this it follows that estimates of the age of the universe based upon its rate of expansion and apparent size are no longer valid. Looking through the giant telescope, Dr. Baade found stars in the central region of the nebula of Andromeda to which the old generalisations did not apply; there are, therefore two types of variable stars with different brightnesses for the same period of variation (star populations I and II). These observations, confirmed in other observatories, double the distance of the Andromeda nebula to about 1½ million light years and extend the age of the universe from 2,000 million years to about 4,000 million years; hence the age of the Earth, calculated from the evidence of radioactivity, no longer appears absurd.

**Origins of the Universe.**—Basically there are two types of theory about the origins of the universe: the evolutionary theories which hold that it had a beginning in time—that it was created or came into being at a particular moment (no matter how long ago), and the "steady state" or continuous creation theories of Bondi, Gold, Hoyle, and some Soviet astronomers who hold that matter is constantly being created and that, therefore, there never was any beginning. For Christians—and particularly for Roman Catholics—the views of the evolutionists in cosmology are a matter of dogma: it is an essential part of most religious views of the universe to believe that it came into being by an act of creation at a particular moment of time. It may, therefore, be of interest to say something about recent work relating to this subject.

In a recent book entitled *Frontiers of Astronomy*, Fred Hoyle elaborates on his continuous creation theory which we have discussed briefly elsewhere (p. 154). Not only does he suggest that matter is continually created out of nothing, but he also disagrees radically with the older theories of the origin of the earth which have usually held that it arose from the condensation of a cloud of incandescent gas. According to Hoyle, the earth has been formed by the coming together of particles in a dust cloud which once surrounded the sun, particles consisting mainly of stone, iron, and ice. The stone and iron fragments formed the core of the earth, whilst the ice melted to form the primitive oceans. There may also have been droplets of oil within the primeval cloud which helped to form the earth's core, and gave rise to the petroleum pools beneath the surface of the globe. Hence the possibility exists (if Hoyle is right) of a further untapped ocean of petroleum deeper down in as yet unreached regions.

But is Hoyle right—or, at any rate, is his continuous creation theory of the universe consistent with the facts? According to many astronomers, there are both theoretical and practical reasons for doubting this. Firstly, Hoyle's mathematical

calculations do not readily fit in with Einstein's field theory of relativity, because they contradict the principle of conservation of energy accepted as fundamental by the physicist. Certainly, a few authorities have tried to reconcile the steady-state theory with relativity, but they have done so at the cost of making certain assumptions which most scientists are not prepared to make. Recently, too, certain results obtained from the use of radio interferometers seem to have thrown further doubt upon Hoyle's findings.

**The Radio Interferometer.**—The radio interferometer, popularly known as the radio telescope, is based upon quite simple principles. If a stream of water comes up against a barrier in which there are two slits some distance apart then the water will pass through the slits in the form of waves and, on arriving at the other side, will fan out once more. Farther away from the barrier, there will be a point (if the slits are not too far apart) where the two fan-shaped series of waves converge and overlap, and here an interesting phenomenon happens. Either the peaks of two waves meet simultaneously or else a peak and a trough happen to coincide. In the first case, the two augment each other, in the second, they cancel each other out. So we get a pattern composed of alternate larger waves and no waves. If light is used instead of water—and, as we know, light takes the form of waves—we will get a pattern of light and dark lines: the first where the waves from two sources have augmented each other, the second where they have cancelled each other out. In short, to be more technical for a moment, the beams will overlap and produce bright lines if they differ in phase by an integral number of wavelengths; they will produce darkness if they differ by an odd number of wavelengths. But ordinarily this difference in phase is produced by a difference in the length of path traversed by the beams, and so an examination of the pattern of interference, of the dark and bright lines, tells the expert the distance of the source of light. The principle of the interferometer was discovered a long time ago by Newton and was used by Michelson in his celebrated instrument (1890), but the stellar interferometer was not built until 1920 by Michelson and Pease. It has been used to study double stars, to calculate the diameter of distant stars, and to solve other problems. Its advantage in astronomy is that it doubles the resolving power of a telescope and makes it possible to measure stars twice as close together in the sky as the limit possible with the telescope alone. Essentially, an interferometer of the optical type we are considering at the moment consists of a beam—in the case of the 100-in. telescope at Mount Wilson, a 20-ft. beam—with a mirror at either end which catches the light from a star. The light is reflected from these mirrors to two other mirrors near the centre of the beam and thence down the telescope tube, in which, at the focal point, they form the pattern of interference from which so much information can be gleaned. For example, the light from opposite edges of a distant star is collected by the outer mirrors and the two rays combine in the telescope to form an interference pattern from which the diameter of the star may be calculated.

But light is only one form of what we now describe as electromagnetic radiation, most of which does not affect the human eye at all. At the short end of the scale are the ultra-violet waves, X-rays, and so on which can cause effects upon the human skin or take photographs, but remain invisible to sight; at the long end are the infra-red rays and wireless waves. All these waves follow the same laws as visible light, and it is therefore possible to create a radio interferometer which can be utilised for the same functions as the optical one, but in circumstances where the optical one is useless. Basically, these circumstances are two: (1) when the star is too faint or too small to utilise the optical interferometer; (2) when dealing with bodies in space which, like the dark clouds in interstellar space, give out no light at all.

In place of mirrors, the radio interferometer has two aerials, about 1350 ft. apart, connected to a reflector shaped rather like the bowl-shaped type of electric radiator, although the newest Cambridge instrument has a reflector shaped somewhat like the cylindrical type of electric radiator. The signals from East and West combine to form a sound pattern which, as the instrument is moved by the Earth's rotation, allows the observer to calculate the Right Ascension (celestial longitude) and the reflector when rotated to North or South gives the loudest signal at a point corresponding to the Declination (celestial latitude). Thus the position of a heavenly body may be pin-pointed in space. By this means almost 2000 "radio stars" have now been found (only about 100 were known in 1951). Some are visible when the 200-in. telescope at Palomar Observatory is pointed in the correct direction, but it appears that most are beyond the reach of human vision even when aided by the most powerful telescope. They are, in fact, outside our galaxy. But one of the most important findings relates to the distribution of stars in space beyond the vision of our most powerful telescopes. According to evolutionary theories of cosmology, the number of stars should become greater the farther out into space one moves—and this is exactly what one finds with the help of the interferometer. On Hoyle's theory, and those of Bondi, Gold, and others, the number of stars should become, if anything, less, rather than greater as distance is increased. So far, then, the latest evidence is not easily reconcilable with theories of continuous creation. Such is the judgment of astronomy's latest technique.

**Jodrell Bank Telescope.**—The largest radio telescope in the world will be the one at Jodrell Bank in Cheshire (*see* Telescope, p. 689), which is expected to be completed by the end of 1955. The cost of this huge instrument—by far the largest instrument ever made for the purpose of scientific research—is believed to be in the region of £500,000, borne equally by the Nuffield Foundation and the Department of Scientific and Industrial Research. With the telescope it will be possible to gain information about almost one thousand times more of the stars and other bodies scattered throughout space than can be seen through the largest visual telescope. This method of investigation has the additional advantage (particularly important in Britain) that smoke, bad weather, the glare from the sun, and other interferences to visual astronomy do not affect its efficiency. Even the dust clouds in distant space, which obscure almost 99% of the stars in the Milky Way, offer no barrier to the radio telescope.

Motion in azimuth (*i.e.*, the vertical arc of the sky from zenith to horizon) is guided by a railway track of 300 ft. in diameter which has to bear the actual instrument—about 1300 tons in weight and 170 ft. high. More graphically, the circular track would just fit into Trafalgar Square, and the 250-ft.-wide parabolic mirror, illustrated in the vignette on the jacket of this book, would easily dwarf Nelson's Column. In spite of the size and weight of the mirror, it will be possible to direct it to any part of the sky with an accuracy of about  $\frac{1}{4}$  of a degree. It can be used, as in the Cambridge instruments, for reception alone, or for combined transmission and reception in which messages sent out into space are reflected back to give information about bodies in space. The existing fixed telescope at Jodrell Bank has already been used in the latter way to give valuable information about meteors.

**The Nature of Cosmic Rays.**—In recent years considerable attention has been paid to two fundamental problems of physics and astronomy: the origin of cosmic rays, and the nature and significance of the interstellar material. These two subjects are more closely related to each other than might appear at first sight, because it is not inconceivable that the cosmic rays may arise predominantly from the interstellar material rather than from certain stars, as was originally supposed. The most striking feature of cosmic rays is the great energy possessed by individual particles; this energy is commonly more than a thousand times that of the alpha and beta rays emitted by radium and other elements, previously regarded as the most energetic atomic particles.

Some cosmic rays have vastly greater energy, up to ten million times the average, and the charge is nearly always a positive one. Since the bombardment of the Earth by such rays is almost constant by day and night, it is obvious that they cannot come from the Sun or from any ordinary kind of star. Therefore, the two possibilities are: (1) that they arise from an abnormal type of star, or (2) that they arise from, or at any rate are connected with, the interstellar material. We must seek, in short, for areas in the universe which contain electric fields of sufficient magnitude to accelerate particles to the immense energies observed in the rays. It is now generally believed that both these possibilities are valid—that cosmic rays may initially be produced by special stars (the magnetic stars, discovered by Babcock), and are subsequently accelerated by moving clouds of interstellar material which contain powerful magnetic fields.

The interstellar material seems to consist of gas and needle-shaped grains, and at a conference on Solid Particles in Astronomical Objects held at Liège in 1954, J. H. Oort attempted to explain the formation of stars in terms of the condensation of such clouds. A similar theory was put forward by Spizer and Whipple in 1940, who suggested that interstellar dust clouds are liable to collapse because the radiation pressure of the light falling upon them eventually drives the dust grains in them to the centre. The gas is then dragged along, and eventually the density of the whole mass becomes so great that it contracts to form a star. There are, however, many good reasons for not accepting such a theory of the origin of stars, and it is now doubtful if the interstellar material plays more than an indirect part in the creation of new stars.

#### ATOMIC PHYSICS.

**Basic Constituents of Matter.**—In atomic physics work on accelerators or "atom-smashers" becomes both more expensive and more complex. The new bevatron at Berkeley, California, produces nearly 6,000 times more energy than its forerunner the original cyclotron and cost over £3 million. Formerly, it was believed that the forces holding atomic nuclei together was the attraction between electrons and protons—or nucleons, to give them their common name—whereas neutrons exercised no such force; but, in 1935 the Japanese mathematician Yukawa upset much of this simple picture by predicting the existence of mesons. Yukawa argued that, just as the existence of electric forces implies the existence of electric waves (or photons), so the existence of nuclear forces implies the existence of nuclear waves, "heavy quanta," or mesons—particles about 300 times as heavy as electrons. Subsequently, mesons were found by analysing cosmic rays (those penetrating rays which enter our atmosphere from outer space). But then a further complexity arose: it was found that there were heavy mesons and lighter ones—the former were named pions, the latter muons.

Previously it was supposed that electrons could exist within the atomic nucleus, but there are good reasons for believing that this is impossible, so when a radioactive nucleus which is unstable breaks down, it is supposed that what occurs is that a neutron is spontaneously transformed into a proton, and an electron is ejected in the process. This electron is created in the process, just as a photon is created when an atom emits light. In fact, it is probable that in this process two particles are created—an electron and a neutrino. The neutrino, postulated by Pauli in 1931, has never been directly observed, but there is good reason for believing that it exists.

One of the major developments in atomic physics, which made the observation of such particles possible, was the invention by the Scottish physicist C. T. R. Wilson of the cloud chamber in 1911. This is based upon the principle that a chamber charged with water vapour produces tracks of condensation when atomic particles pass through it; the neutron, the meson, and the other particle known as the positron were first observed in this way. If, in addition, the chamber is placed between the poles of a large electromagnet, the deflection of the tracks will show whether the particle under observation is negatively or positively charged. In this way,

it was shown that particles exist which have the mass of an electron but are positively charged. These are the positrons. The present position, then, is that the photon is a unit of light—a tiny package of light waves; the meson (which comes in two sizes, light and heavy) is a package of nuclear energy—neither of these units exist within the atom—they are created when certain processes occur within the atom. The neutrino is a very light and neutral particle—colloquially one might describe it as a tiny neutron, and, even more colloquially, a positron might be described as a "positive electron." In 1955 the anti-proton or "negative proton" was discovered. Its existence had been predicted on theoretical grounds, but it occurs only at high energy, and until the construction of the Berkeley bevatron, which has been described as the world's greatest atom-smasher, it was not possible to create nuclear bombardments of sufficient energy to create it.

Some physicists have supposed that all these confusing particles may be broken down into simpler units, thus restoring the former simplicity of our picture of the atom, but Professor O. R. Frisch, of the Cavendish Laboratory in Cambridge, does not think this likely; there is, after all, no good reason why nature should be easy to understand just because we should prefer it.

**Atomic Physics in the Service of Man.**—The Conference on Atomic Energy held at Geneva during August 1955 gave an impressive demonstration of what the atom can do for peace and the material prosperity of the human race. Scientists from many different countries of the world came to Geneva to exchange information, and it soon became clear that the great "atomic" powers—Britain, America, France, and the Soviet Union—are all about equally advanced in atomic research, although naturally some of them are slightly more advanced than the others in specialised aspects of the subject.

Particularly interesting was an exhibition of equipment which included scale models of reactors—the French "atomic city" at Marcoule, the British Calder Hall reactor now nearing completion, and a small (5000-kW) reactor already in action, in the Soviet Union. The American exhibit in this field was a working "swimming-pool" research reactor, so called because of its glowing uranium plates immersed in a pool of water.

But the largest trade exhibit of atomic equipment and products was the British; for it is clear that Britain sets great hopes of future prosperity upon the prospect of becoming the world's atomic workshop. (We are, in fact, already producing nuclear power in this country at a cost which, while no cheaper, is at any rate no more expensive than the more conventional power sources.) There are three basic economic factors which determine Britain's atomic programme:

- (1) The need to save money on atomic fuel, most of which, in the form of uranium, has to be imported from the U.S.A.
- (2) The need to increase our exports by creating a market for atomic products—e.g., small reactors, atomic equipment, and radio-isotopes.
- (3) The need to replace our diminishing coal supply by atomic energy in the quickest possible time.

The first problem is being tackled along two different lines: the more efficient utilisation of what fuels we have or the use of new fuels, and the discovery of new methods of employing waste products. Thus thorium, a relatively cheap metal once used to coat gas mantles, may partly replace plutonium and uranium 235, and more efficient "breeder" reactors are being devised which are capable of creating more fuel in the very process of consumption. In the U.S.A. such breeder reactors have proved capable of producing one new neutron for every ten consumed, but Sir John Cockcroft has recently announced the completion of the Zephyr reactor, which actually produces one new neutron as fuel to replace each one consumed. The Zephyr reactor (i.e., Zero Energy Fast Reactor) is still at an experimental stage in which it develops little electric power, but it may at some future date prove of commercial value for producing cheap power for industry. Atomic

waste, formerly a considerable problem when methods had to be found for disposal of this dangerous material, is now being used in London hospitals for the treatment of cancer.

Britain's need for economy and a new fuel supply has led to plans to obtain at least 40% of our electricity from atomic sources by 1975. In order to do this as quickly as possible, it is likely that the design of reactors will be standardised at the present fairly simple level so that they may be got rapidly into production. Nuclear reactors already hold out the hope of cheap energy to countries without coal or hydro-electric sources of power, and one of the U.S. delegates to the conference predicted that in only ten years' time the building of any power-generating plant other than the atomic type will have become obsolete. The outlook for the future in a world utilising atomic energy (and remaining at peace) is full of hope: seas can be drained, mountains moved, deserts irrigated, diseases cured, and knowledge of the universe increased. The only "if" about this great programme lies in the mind of man, the ultimate source of most of our troubles. Shall we have the wisdom to use this great discovery to just and humane ends? All the world's scientists at Geneva were agreed about one thing—that for the human race today it is all or nothing.

**The Controlled Fusion Hydrogen Reactor.**—There have been rumours in the world Press of the possibility of creating a controlled fusion reactor which would make all other reactors out of date. As we have already seen (p. 162), the atomic bomb is a fission bomb which produces energy by the breakdown of complex elements—ordinarily uranium 235—into simpler fragments, and the principle of a fission reactor is to utilise this reaction whilst slowing it down by the use of so-called moderators such as heavy water or graphite. The ordinary fission reactor is, in fact, a very slowly exploding atomic bomb.

The hydrogen bomb, on the other hand, is a fusion bomb—i.e., one which produces its energy by the fusion of light elements (isotopes of hydrogen and possibly lithium) into heavier ones (helium)—and a fusion reactor would be one in which this reaction, suitably controlled, produced energy utilisable commercially as in the case of the fission type. Britain, the U.S.A., and the U.S.S.R. are all reported to be working along such lines, but so far as is known their efforts are still largely in the realm of theory. At the Geneva Conference, the Indian physicist H. J. Bhabha predicted that fusion reactors might be in use about 1975, so clearly they are a long-term project, and sensational accounts in the Press have been somewhat over-optimistic. However, it is more than likely that such reactors will be created sooner or later and therefore, perhaps, worth our while to discuss briefly their presumed nature and possible advantages.

First of all, a reactor utilising heavy hydrogen (deuterium) as fuel would not only tap sources of energy 1000 times greater than the fission type, but would do so much more cheaply. One pound of deuterium costs about £30-£40, whereas a pound of pure uranium costs something in the region of £3000. Secondly, the use of deuterium would produce no radioactive waste, the disposal of which has been such a serious problem in the case of ordinary fission reactors. Lastly, the reactor would contain less fuel, would be safer, and would not require such heavy shielding as the fission type—this means that it might be the answer to the problem of atomic power for aircraft or rockets.

How would such a reactor work? Since it has not yet been created, and we do not even know in detail how the hydrogen bomb works, only guesses are possible. It is presumed that the hydrogen bomb is a mechanism in which isotopes of hydrogen (deuterium) and perhaps other substances are made to release vast amounts of energy by fusing into helium. This, of course, is the reaction occurring within some stars and notably within the sun. But it can occur only in the presence of great heat, a heat so intense that on earth it has to be supplied by the exploding of a uranium fission bomb, and naturally this method could not be utilised in a reactor which is based upon the gradual release of energy—a slow explosion, in fact. What is needed for the production of a

hydrogen reactor, then, is (a) the fuel (deuterium), (b) a means of producing very intense heat (many millions of degrees), which is also safe, (c) a means of controlling the reaction once the fusion has begun (a moderator). The most frequently made suggestion for bringing about these conditions is that the fuel lithium-six deuteride (a chemical compound of one of the isotopes of lithium with deuterium) should be bombarded by a beam of electrons focused upon a minute spot of the fuel. This would raise the temperature of an area about one-thousandth of a millimetre in diameter to many million degrees. Under such conditions, it is believed, the bombarded area would turn into helium, with the release of vast amounts of energy. But the real question is, what would happen then? Would a chain reaction be started which would continue until the fuel was used up, or would the initial bombardment with the electron beam have to be continued? It is doubtful whether anyone knows, but it is perhaps along such lines as these that the problems of the fusion reactor may be solved.

#### AUTOMATION AND ELECTRONICS.

**Automatic Factories.**—What effect nuclear methods of producing power will have upon industry can only be guessed; but an even more revolutionary development, relating this time, not to atomic energy, but to the new science of cybernetics, will also become a reality in the near future. Cybernetics is the science of calculating machines, and already factories in the United States, Britain, and the Soviet Union are being run by calculating machines without workers—these factories, in short, are completely automatic. So certain is the spread of this technique, that a Conference under the chairmanship of Sir Walter Puckey was held in December 1954 to discuss the impact upon society of the automatic factory.

**Electronic Computers.**—A great deal of nonsense has been spoken about calculating machines; for example, it has been imagined that they may become more clever than man and develop a life of their own, that they can actually "think," and so on. Actually, calculating machines, or electronic computers, to give them their more correct title, are, by themselves, capable of doing nothing at all; they are merely devices for doing long and laborious calculations very rapidly. Nothing comes out of the machine except what has gone in in the form of "instructions" as to what the machine must do, and these instructions must ultimately come from some human being. The machine is a completely obedient and accurate slave, working with incredible speed but altogether without intelligence. If, for example, the instructions put into the machine (in the form of punched cards, punched paper tape, or magnetic tape) are incorrect, the results will be absurd; for the machine has no faculty of judgment. As Christopher Strachey, an expert in this field, has pointed out, a computer without a series of instructions from a human being is like a typewriter without a typist or a piano without a pianist. But having pointed out these restrictions upon what computers can do, what they are able to do is astonishing enough: they can, for example, play a game of draughts or write a (rather inadequate) love-letter. Thus the Manchester University computer was found to be capable of the following effort:

"Darling Sweetheart,

"You are my avid fellow feeling. My affection curiously clings to your passionate wish. My liking yearns to your heart. You are my wistful sympathy: my tender liking.

"Yours beautifully,  
"M.U.C."

Even this result might be regarded as impressive when typed out by a machine were it not that its mechanism of production is extremely simple. There are only, in fact, two basic types of sentence. The first is "My — (adjective) — (noun) — (adverb) — (verb) your — (adjective) — (noun)." The machine is fed with lists of suitable adjectives, nouns, verbs, and adverbs, from which the blanks are filled up at random. There is also the further possibility that the adjectives and adverbs may be left out altogether. The second type is, therefore: "You are my — (adjective) — (noun)." The most likely change in the immediate future is that clerical jobs in industry (which are mostly routine) will be increasingly taken over by electronic computers—a fair estimate seems to be that a million clerks will be displaced in the next ten years. Since almost one-tenth of the working population of Britain consists of clerical workers, the influence in this field alone in the next fifteen years or so will not be negligible. Even so, this will be as nothing compared to the developments when many factories become automatic—huge machines into which instructions are fed by one or two managers. Of one thing, however, we may be sure: that electronic computers will never replace human beings completely—for the only "brain" without which the computer is useless is that of the human being who works it.

#### MEDICINE.

**New Methods in Medicine.**—Medicine has been revolutionised in two quite different ways within the last fifteen or twenty years. First, the new drugs provided by science are of remarkable efficiency, and correspond to nothing that has ever been known before. During the nineteenth century the bacteriologist Ehrlich dreamed of producing drugs which would be "magic bullets" capable of singling out the invading germs while leaving the human body unharmed—a task which is not so simple as might be thought, for the material of human bodies and of bacterial bodies is not nearly so different as our pride might like us to believe. Ehrlich discovered Salvarsan, an arsenical compound which revolutionised the treatment of syphilis, and, of course, the nineteenth century also had quinine, which was discovered centuries before to be specific in the treatment of malaria; but beyond that medicine was mainly a matter of "wait and see." Now we have the sulphonamide drugs, first discovered by the German chemist Domagk in 1935 in the form of Prontosil, but now elaborated into many types for different diseases; the group of antibiotics, of which penicillin was the first (discovered by Fleming in 1928, and made a practical proposition by Florey and Chain and others who showed how to extract it commercially), now include many other substances such as streptomycin, terramycin, chloromycetin, and so on. We have also the vitamins to treat and prevent the vitamin-deficiency diseases such as scurvy, pellagra, rickets, and beri-beri and the hormones to cure cretinism, myxodema, Addison's disease, and some types of cancer.

**A New View of Personality.**—The other discovery in medicine which we make no apology for discussing here, although it might be thought to belong to the Medical Section, is the rediscovery of the patient. This is of importance because its significance extends far beyond the bounds of medicine into psychology, sociology, and all the social sciences. During the nineteenth and early twentieth centuries, medicine had become mechanistic in its outlook and increasingly specialised with the result that some physicians began to forget that they were treating a human being rather than a part of a machine. However, as we have seen, the new concept of psychosomatic medicine makes it clear: (a) that an individual's outlook on life may be causal in producing organic disease and even death; (b) that diseases due to mental stress are on the increase—that, in short, we have almost defeated the dragon of plague and pestilence, only to meet with a new problem created by the psychological stress of modern life in an industrial community.

This fact is intensely significant when we come to discuss the nature of man; for we can now see that in order to produce a better society it is not enough to produce sufficient food, clothing, and housing—we must also consider man's psychological needs, which, if unsatisfied, not only lead to unhappiness but also to psychosomatic disease and neurosis. Who, for example, could have a higher material standard of life than the American business executive? Yet nearly all large industrial concerns both here and in America have become alarmed within recent years at the number of their senior executives who die in comparatively early life from heart diseases recognised as due to over-stress.

**Radioisotopes.**—Radioisotopes were first produced in the 1930s in a cyclotron, the basic principle of which is that a beam of atomic particles is speeded up in a powerful magnetic field. Such a beam is then used to shoot at the nuclei of various elements which it is desired to smash, and by this means they may be broken up into other elements. However, the trouble about the cyclotron is that it can ordinarily produce only small amounts of radioisotopes, which are the substances most useful to man. An isotope is (to quote Gordon Dean of the U.S. Atomic Energy Commission) "something that is exactly like something else only it is different"; an isotope of gold is gold, but different in ways that can be discovered only by the most complicated laboratory equipment from ordinary gold. Basically, the difference between isotopes lies in the varying number of particles within the nucleus, and this is signified by a number following the name of the substance, hence uranium 233, 235, and 238, or oxygen 16, 17, or 18 (see p. 162). One type of isotope which is easily distinguished from its fellows is the radioisotope, because, although otherwise almost indistinguishable from the normal element, it can be identified by a Geiger counter, or other instrument used to detect nuclear radiations. When, during the Second World War, the chain reaction in uranium 235 was made possible, there also arose the possibility of producing radioisotopes in large quantities, many thousands of times greater than before, and at a very much lower cost. The atoms of a substance placed in what is known as a nuclear reactor or atomic pile are exposed to a bombardment of particles far more intense than that in a cyclotron, in which a relatively small number of particles is aimed at atomic nuclei, which, as we already know, are mostly empty space; in the latter circumstances the percentage of "direct hits" is not great. In a nuclear reactor, however, the bombardment from a mass of many tons of uranium and graphite is far more intense; for each square centimetre of the reactor carries a flow of as much as a million million neutrons every second. So, for example, when the radioisotope of carbon is being produced, one nuclear reactor can produce in a few weeks at a cost of about £3,000 as much radioactive carbon as a thousand cyclotrons could produce at a cost of £30,000,000.

Radioisotopes are produced by a reactor in three different ways: the neutrons of the reactor may be absorbed by the target element, producing heavy isotopes of the same element; or they may knock pieces off the target element, producing isotopes of a different element; finally, if the target element is uranium 235, these nuclei split into two pieces, each the radioisotope of a lighter element.

These substances open up entirely new prospects in many fields of scientific research. For example, it is now possible to "label" chemicals by making them radioactive, and such chemicals can be traced throughout their passage in living creatures. One of the results has been to show how the organism is much less stable and unchanging than used to be supposed: radioactive salt injected into a vein has been observed to pass through the wall of the blood-vessel, go to the sweat glands, become transformed into sweat, and be removed from the body in this form in less than one minute. We can now find out how proteins, carbohydrates, and fats are built up and broken down in the body, how cancer cells differ in their processes from normal cells, how drugs are utilised, and to what parts of the body they pass. Thus the drug digitalis is used in treating heart diseases and is, of course, obtained from the foxglove. When foxgloves are grown in an atmosphere of radioactive carbon dioxide the plants become impregnated with the radioactive carbon, and the drug can be traced throughout the body, so giving valuable knowledge about its method of action. The terrible disease of leukaemia, in which there is overproduction of the white blood-cells, often leading to the death of the patient, is now about to yield up its secrets: for patients fed with radioactive zinc (an element found in very minute quantities in the human body, but apparently necessary for its health) demonstrate that in leukaemia the white cells are deficient in this element.

In treatment, too, radioisotopes may revolutionise our outlook. Patients with disease of the thyroid gland now have their condition diagnosed

by giving them a "radioactive cocktail" of iodine (which is dealt with in the body by the thyroid). If the gland takes up too little of the iodine, the condition is probably cancer, if it takes up too much, the person is probably suffering from thyroid overactivity, or exophthalmic goitre. Later, if cancer has been diagnosed, larger doses of radioactive iodine may be given to destroy the cancer cells. Recently, a machine known as the gamma-ray scanner has been developed in the United States, which is used to trace areas in the body to which cancerous thyroid tissue has spread. After giving radioactive iodine, the scanning part of the machine is moved over the body and a photographic film records a pattern of dots over the malignant areas. Similarly, radio-phosphorus is used to locate brain tumours (which accumulate large quantities of this element), and the extent and situation of the tumour can then be traced. Radioactive boron, or Boron-10, is another substance which is accumulated by brain tumours, and a new technique is to inject this substance into the body, wait until it has passed through the blood-stream to the cancer, and then expose the patient's skull to a stream of neutrons from a nuclear reactor. Under the neutron bombardment the boron atoms are split into two parts, each of which is intensely radioactive and destroys the cancer cells whilst leaving the normal cells unharmed. Cobalt is even more important in the treatment of cancer; for, being highly radioactive, wafers impregnated with radiocobalt or even nylon thread treated in this way, smash cancer cells with greater efficacy than almost any other known source.

In agriculture, too, radioisotopes are being used. Thus the process of photosynthesis, by which plants create under the influence of sunlight carbohydrates, fats, and proteins, is now coming to be understood. Plant diseases, like human diseases, are yielding up their secrets: insecticides are becoming more effective; and it is even possible to study the migrations of flies and other insect pests by making the flies radioactive. Perhaps more incredible, it is possible to sterilise by radiation certain insect pests, release them in an area infested by them, and thus lead to their mating with females, who become unable to reproduce.

In technology and engineering radioisotopes are also showing their value. Invisible flaws can be detected in castings and forgings, leaks in pipes are easily traced, the course of underground oil or water pipes is shown up, and the thickness of materials can be measured with the greatest accuracy by placing a radioisotope on one side and measuring the intensity of radiations penetrating to the other. Impurities in drugs, foods, and metals which cannot be detected in any other way are demonstrated by this means, the efficacy of detergents is measured, and the degrees of wear upon machine tools can be found in less than half a minute, whereas previously such measurements of wear and tear took almost the whole life of the tool to estimate. Wear on pistons or gears is also readily discovered by measuring the amount of radioactive material transferred to the surrounding lubricating oil.

**The Polio Vaccine.**—There was a good deal of disappointment over the Salk vaccine made by Dr. Jonas Salk in America; for, although it has been administered without harmful results to many thousands of American schoolchildren, some batches were found to have serious and even fatal effects. Now, however, a new British vaccine has been prepared by a variant of the American method. In the vaccine a less-virulent strain replaces the highly virulent Type 1 (Mahony strain) used by Salk. The work has been carried out by two private firms, Glaxo and Messrs. Burroughs Wellcome in association with the Medical Research Council. Vaccination involves two injections with an interval of three weeks in between, is voluntary, and to begin with will be offered to all children born between 1947 and 1954. Parents who wish their children to be vaccinated should apply to the local health authority; they must, of course, give their written permission. The Minister of Health said at a press conference (19.1.56): "I am advised that it will be as safe as any vaccine could be. It will not guarantee that a person who is vaccinated will not in any circumstances

catch poliomyelitis, but it should afford a considerable measure of protection. We believe our own vaccine to be preferable to any made in other countries and it is not proposed to import vaccine from abroad." (At the time of writing (Feb., 1956) there is also a new oral vaccine which is taken in capsules by mouth. This has been produced in America and is being tested out on volunteers in Belfast.)

**New Discoveries in the Field of Virology.**—The work of Salk and his colleagues in relation to poliomyelitis has stimulated research which may prove to be of far-reaching importance in the field of virology (the study of virus diseases). Let us see what this research has so far produced.

Viruses differ from bacteria and other organisms causing disease in a number of important respects: most are small enough to pass through the finest filters; they are invisible, in many cases, even under powerful microscopes (although they can be photographed under an electron microscope); and they cannot, as bacteria can, live outside living cells. Practically speaking, this means that although viruses cause many serious illnesses—poliomyelitis, smallpox, measles, chicken-pox, yellow fever, influenza, amongst others—it is difficult to isolate, study, and grow them in the laboratory. Hence it is also difficult to discover methods of curing the diseases they produce. In a few virus infections (*e.g.*, yellow fever and smallpox) techniques of vaccination were discovered a considerable time ago; yet others respond to antibiotic drugs such as aureomycin, but the vast majority have so far evaded human attempts at control. For such diseases there are no specific cures.

The major problem to the virologist has been the fact, noted above, that viruses grow only upon living tissues, and the scientific study of any organism is dependent upon our ability to grow it outside the living body. Some viruses will grow upon live eggs kept in an incubator, but recent research in the U.S.A. has made use of tissue cultures—*i.e.*, living tissues grown in a sort of broth after removal from the animal in which they developed. The most common tissue used for this purpose is monkey kidney—hence the large imports of monkeys from India to America. But even the most bizarre materials have been utilised; for example, polio virus has been found to grow readily in a tissue culture of human cancer cells known as HeLa (from the first letters of the name of the negro woman who died from the cancer some years ago). Kept at body temperature, these cancer cells continue to grow and multiply when suitably fed in a liquid medium from which waste products are removed as soon as produced. They may grow indefinitely long after the individual from whose body they were removed has died, and polio virus thrives in them.

Of course, it would be unsafe to utilise vaccines grown on cancer cells for injection into human beings, so the search for more suitable tissues continued. A suitable tissue, it was decided, would be one which was easily obtainable, the cells of which would multiply rapidly, one which was safe, and in which viruses would readily grow. All these requirements seemed to be filled by a very common tissue—human adenoids, freshly removed during operation in the ordinary course of events in a general hospital. Adenoids, it was thought, would be perfect for the purpose. But here another complication arose; for of the specimens first tried out, about 60% when placed in tissue culture began to disintegrate even before they had been inoculated with virus. Moreover, the type of degeneration suggested very strongly that another type of virus had been present in the adenoids prior to removal. The original purpose of the research was left aside for the moment to investigate this phenomenon, and a hitherto unknown virus was discovered in the tissues. Further investigation of the human eyes, nose, throat, and tonsils led to the discovery of no fewer than eleven new types of virus which have since been shown to be responsible for a number of those mysterious infections which occupy so much time in the family doctor's surgery hours and cause so much minor misery: acute conjunctivitis, virus sore throat, pharyngitis and hoarseness, and even virus pneumonia (which is not a minor ailment and is no joke to the sufferer). This whole

group has been given the name of the A.P.C. virus diseases—short for adenoidal—pharyngeal—conjunctival. Strangely enough, one virus which did not turn up in this very thorough investigation was the one supposed to cause the common cold, and some of the leading authorities seriously doubt whether such a virus exists. They suggest that it is more than likely that the common cold is simply an allergic reaction (see Medical Section) to other types of virus—not that this is likely to be much consolation to sufferers. At the time of writing (September 1955), vaccines against the whole A.P.C. group have been prepared and are at present under trial in the U.S.A.

Quite apart from the A.P.C. group, the new method of tissue culture devised by Dr. Enders and his colleagues at the Boston Children's Hospital has been instrumental in discovering more than 356 new virus strains in the course of investigation into poliomyelitis. The importance of this work and its future possibilities may be summarised as follows:

(1) The discovery of the 356 viruses mentioned above, some of which may be harmless, others of which are now known to produce diseases the cause of which was previously unknown, and the remainder—the "viruses in search of a disease"—which in the future may be found to be responsible for a number of very serious illnesses not so far recognised as virus infections.

(2) The new methods of tissue culture make it likely that new vaccines for such diseases as measles, chickenpox, shingles, mumps, and German measles may soon be found (some are already under trial).

(3) There exists the even more fascinating possibility that many diseases of hitherto unknown cause, diseases which have never been suspected of being due to infection, may, in fact, be virus diseases. For example, diseases of the nervous system, such as disseminated sclerosis, may turn out to be produced in this way and therefore curable by vaccines.

Two yet more distant possibilities exist which may bring about a revolution in medicine as important as the discovery of antibiotics, anaesthetics, or antiseptics. Firstly, since it has been found that many viruses are particularly selective in their action (*e.g.*, the virus of shingles, which is really a chicken-pox virus with a taste for nerve cells), it is quite possible that at some time in the future we may be able to produce a virus strain selective to cancerous tissue. If this happens, we shall be able to inoculate cancer sufferers with a virus which will destroy tumours in the living body whilst leaving healthy tissue intact. Secondly, it may be possible to discover some material in viruses, common to all or to a large number of them, which can be given in childhood as a routine to prevent a large number of serious diseases—a sort of universal vaccine. This is not too improbable because the old controversy as to whether viruses are alive (see under Viruses in Medical Section), seems to have been settled by the theory that viruses outside living cells are not "alive," that they can live only by utilising the processes within living cells—in particular their enzyme systems. The virus *plus* something in living cells is alive and can multiply. If we could interfere with this process viruses could not exist.

#### Special Problems Relating to the Salk Vaccine.

There are two ways of producing a vaccine: either one endeavours to weaken the potency of the virus by growing it in an unnatural host (for example, the material used for smallpox vaccination is live small-pox virus weakened by growing it in cattle, when it takes the form of what used to be called "cow-pox"). Or else one makes use of a killed virus—killed, of course, in such a way as to preserve its property of stimulating the resistance of the body. Whichever method one uses, the vaccine must (a) be safe to use, and (b) be able to produce resistance just as if the patient had really had the disease.

Dr. Salk tried both methods in his research into polio, but finally decided to make use of the "killed" method. It will be understood that it is not easy to kill the virus in such a way as to leave unimpaired its resistance-stimulating properties, and the tragedies which caused so much

criticism in the U.S.A. were due to virulent particles persisting in a supposedly killed vaccine prepared by one firm. It is this which has led some authorities to believe that Salk's method of preparation is unsafe. There are tremendously complex problems to be solved in preparing a vaccine, but the main ones are these:

(1) *Selection*.—Each species of virus or other disease-producing organism has many sub-types varying both in virulence and ability to stimulate resistance. For instance, although there are three main types of polio virus, there are perhaps as many as 300 minor varieties or "strains." Here the problem is to select those strains which have the highest power to stimulate resistance and are, on the other hand, relatively non-virulent and capable of being rendered safe by the killing process.

(2) *Preparation*.—It is necessary to kill and preserve the virus with agents which maintain its power to stimulate resistance and are also harmless to human cells. For example, Dr. Salk, having found such an agent, was disappointed to find that the substance introduced as a preservative destroyed the efficacy of the vaccine after a period of time.

(3) *Spacing*.—This relates to the so-called "booster effect," which means that when an immunising substance has been injected into the body, a second injection given after an appropriate interval has a greatly enhanced power of stimulating further resistance. (That is why, most inoculations are given in a series of shots.) If the spacing, which varies from one type of vaccine to another, is not correctly determined results will be poor. Salk believes that when his vaccine is made safer and the correct spacing determined for the injections, the protection given will be lifelong.

**Vitamin B12.**—The specialist in blood diseases knows of many different types of anaemia, but basically these may be separated into two groups: the microcytic (small-celled) anaemias and the macrocytic (large-celled). In the first group, of which ordinary anaemia is an example, there may have been loss of blood from the body or lack of the iron which is so necessary to create new blood, and in this case, not only is the total number of red cells reduced but the existing cells become smaller. Treatment, of course, depends upon two principles: stopping the loss or destruction of blood, and giving the patient iron to build up new supplies. The macrocytic anaemias, however, cannot be so simply dealt with. The commonest blood disease in this group, pernicious anaemia, was described accurately by the British physician Addison about 100 years ago: he noted the increasing pallor of the skin, which develops a lemon tint, the gradually developing weakness, and the final death which in his days were the inevitable result of the disease. Iron, as Addison also noticed, had no effect whatever upon the course of the condition: the red cells, reduced in number, were increased in size. No hope for the sufferer existed until, in 1926, the American workers Minot and Murphy were able to show that the eating of raw liver, or lightly-cooked liver, was capable of alleviating the disease. There was no cure; for the patient had to go on eating up to  $\frac{1}{2}$  lb. of raw liver daily for the rest of his life—but so long as he did so he could expect to remain in good health. Still later, extracts of liver were used in place of this rather unpleasant and trying diet, and finally, it was found that, not only could these extracts be given by injection, but that when given in this way only one-fiftieth of the original dose would suffice to maintain health. It was observed, too, that dried hog's stomach had a similar effect in keeping the blood at its normal level. How, the physicians asked themselves, could these facts be explained?

It had been known for some time that the stomachs of sufferers from pernicious anaemia lacked the hydrochloric acid found in the normal stomach, and it became clear that something else was lacking too: an enzyme known as the intrinsic factor or the *Casile* factor after its discoverer. The intrinsic factor, produced in the normal stomach, acted upon another substance called the extrinsic factor, a sort of vitamin found in many foodstuffs, to produce the factor present in the liver (which acts as its storehouse). The

patient with pernicious anaemia may have ample supplies of the extrinsic factor, but lacking the intrinsic one, he is unable to build up the anti-pernicious anaemia substance; giving him hog's stomach adds once more the missing intrinsic element; giving him liver extract adds both intrinsic and extrinsic elements.

Research continued to discover the chemical nature of the anti-pernicious anaemia substance and to isolate it in pure form, and finally in 1948 British and American workers almost simultaneously were able to isolate what is now known as vitamin B12. Vitamin B12 occurs in the form of small, red, needle-shaped crystals, and is an extraordinarily potent substance—more powerful in high dilutions than any other known hormone or enzyme—indeed, it is only surpassed in this respect by certain almost unbelievably poisonous bacterial toxins.

Still more recently, Dr. Dorothy Hodgkin of Cambridge has been able with the aid of X-ray analysis of the crystals of vitamin B12 to discover its formula—in other words, to obtain a sort of picture of what its very complex molecular structure looks like. Specially significant (although this had been known for some time) is the presence of an atom of cobalt within the molecule, and also the similarity in structure between vitamin B12 and other biologically important substances such as bile pigments, haemoglobin, and chlorophyll. Cobalt is what is described as an essential trace element—that is to say, like manganese and other substances, it is essential to animal life in minute traces. On pastures low in cobalt sheep get "pining disease" or "coast sickness," in which the blood shows changes similar to those in human pernicious anaemia. So now we understand one of the purposes of cobalt—it is necessary to build up vitamin B12, without which red blood cells cannot be manufactured by the body. Vitamin B12, incidentally, is no longer produced from animal livers (it took about 100 tons of liver to produce 1 gram of the pure factor), but as a product of fermentation by moulds, one type of which is related to the mould which produces streptomycin.

Although research of the sort carried out by Dr. Hodgkin and her co-workers may seem highly academic and abstruse, it must be remembered that it is in such ways as these that we shall learn more of the secrets of body processes in health and disease.

## POPULATION AND FOOD.

There are round about 2,300 million people upon the earth, and this number is rapidly increasing, largely due to improved standards of public health and the dramatic advances in medical science. But we now have to face the appalling fact that two-thirds of the world's population is living under conditions in which birth-rates and death-rates are extremely high—in which, that is to say, many are born and many die young—and where the total food production is inadequate to provide enough food for everyone.

The only solution to this problem is: (a) food production increase, and (b) population limitation, but the one must move parallel with the other, and the principle of population limitation is opposed by two very different bodies: the Communists and those religious bodies who forbid contraception, mainly the Roman Catholic Church. But the problem is not merely that of preventing the standard of living of the backward areas from falling; for, with the increase of industrialisation and education, they are not asking merely for their previous standard of living not to be reduced—they demand that it shall be raised to that of the European countries. The present state of affairs is that the backward areas of the world: (a) are producing more mouths to feed than ever before, and (b) at the same time are asking for a higher standard of living than ever before.

A recent Report by PEP (*World Population and Resources*, published by Political and Economic Planning, 30s.) concludes with the words: "inequalities in population density, in health and happiness, in food and material supplies and in much else besides are likely to be greater 30 years hence than at the present time, unless the growth of population in the over-crowded countries can be restrained."

## AGRICULTURE.

**Weed Control.**—Weeds are a nuisance. But they are more than a mere nuisance to the agricultural economy of this country. One of the things noticed by the recent Soviet visitors to Britain was the amount of weeds in our crops and pastures, and so some discussion of weed control may not be out of place. Of all our food crops, at least 10% by area are weeds which waste something like £50 million every year, and it has been calculated that if weeds were got rid of, nearly 25% more corn could be grown without any other factors being changed. Weeds also carry insect pests over from one season to another, interfere with mechanical harvesting by getting entangled in the machines, and, when present in samples, may cause their rejection by the miller, maltster, or corn merchant. That is why the Ministry of Agriculture and other bodies have formed a "Weed Control Joint Committee" to deal with the problem. Removing such pests by hand may sound feasible, but hand removal may cost the farmer anything from £100 to £250 per acre per year.

About 70% of the space utilised directly or indirectly to supply human food in Britain is grassland—and 30% of that space is occupied by weeds. Some of them are harmless to animals, but have an unpleasant taste which prevents cattle from making full use of the grass which is mixed with the unpalatable stuff. Others, such as ragwort, are actively poisonous, and kill many cattle and horses yearly—although ragwort is harmless to sheep. What are we to do about this type of pest?

The three main methods of getting rid of weeds are, firstly, by the so-called selective or hormone weed-killers which destroy most ordinary plants whilst leaving grasses unharmed—and "grasses," of course, include all the corn crops: barley, rye, oats, wheat, and so on. (In scientific terms, these weed-killers destroy dicotyledonous plants and are innocuous to monocotyledonous ones: see p. 167 of this section.) The two main killers of this type used are known for short as "2:4-D" and "M.C.P.A." Unfortunately, they are useless against weeds of the grasses sort, such as wild oats and couch grass, because these belong to the same group as the crops themselves. Secondly, it is possible to use non-selective killers, such as sodium chlorate, which destroys everything growing; this is used after harvest, and the effect wears off by sowing-time the following spring. Other non-selective poisons can be used after sowing plants, but before the seedlings appear above ground: for example, the Forestry Commission sprays weeds on tree-beds with light mineral oil. Lastly, there are the older and more mechanical methods: pulling by hand, and the grazing by sheep to destroy ragwort (which as we have seen is harmless to them). A refinement of guile is the destruction of rushes by grazing with cattle; rushes are not very delectable to cows, but an old method is to spread salt on them to make them more palatable.

We have still a long way to go in research into weed-killers, but the figures quoted above will show how important such research can be to our national economy.

## PSYCHOLOGY AND PSYCHIATRY.

**The Nature of Instincts.**—A great deal of important work on the nature of instincts of animals has been carried out recently by K. Z. Lorenz and his collaborators in several European countries, and by N. Tinbergen of Cambridge University. This is too complex to summarise here, but what is becoming clear is that, in relation to man, the word "instinct" is inapplicable. S. A. Barnett, in *Science News*, writes in an article on "Instinct and Learning" that: "Man has no rigid 'innate' or 'instinctive' behaviour patterns. A child is not born with ready-made neural (nervous) mechanisms for social behaviour: his behaviour towards other people develops as a result of a learning process which is continually dependent upon his daily experiences in the particular circumstances in which he grows up. That is, it depends on the environment which the community provides for him." Elsewhere Barnett writes: "If... we are concerned with delinquent behaviour, there are two possible attitudes. One is to condemn the behaviour on moral grounds, and perhaps to punish it. The other is to use scientific methods to

seek its causes, with a view to curing or preventing it. In general, it is the second course which gives the better results." The two generalisations upon which modern psychology and psychiatry are based are the two implied above:

(1) That all human behaviour is learned from others—whether it be normal or abnormal—that is to say, it is social in origin.

(2) That the only *fundamental* way to change human behaviour is to seek its causes and deal with them.

**Juvenile Delinquency.**—For these reasons there has been a tremendous increase in interest in what is now called social psychiatry—that school of psychiatry which regards mental illness as largely social in origin and seeks to treat it on a group basis rather than purely individually. With an increase in mental illness has gone an increase in delinquency, and particularly juvenile delinquency, since, of course, neurosis and delinquency, as Freud pointed out long ago, are the opposite sides of the same penny, both implying rebellion against society.

Dr. Robert Lindner, a leading American expert on juvenile delinquency, makes the following points concerning this serious problem:

(1) "Our youth is no longer in rebellion (a common and natural feature of youth in all ages), but in a state of downright active and hostile mutiny. Within the memory of every living adult, a profound and terrifying change has overtaken adolescence."

(2) Although adolescence has always been regarded as a period of turmoil it was formerly characterised in sensitive individuals by the wish for solitude—as in the classical cases described by Shakespeare, Goethe, Tolstoy, Dostoevsky, Twain, James Joyce, Thomas Mann, and the rest—and also by "nameless hungers, as well as cosmic yearnings, strange thirsts, occult sensations, murderous rages, vengeful fantasies and imaginings that catalogue all of sin and crime." Today, it is characteristic of modern youth: (a) that they shun solitude (which was frequently creative) and go in gangs, they engage in "pack-running, predatory assemblies, great collectivities, that bury, if they do not destroy, individuality. Into these mindless associations the young flock like cattle," (b) they act out their phantasies.

(3) The delinquent is a rebel without a cause, hence in a chronic state of mutiny. "The youth of today is touched with madness, literally sick with an aberrant condition of mind formerly confined to a few distressed souls but now epidemic over the earth."

According to Dr. Lindner, the reason for this state of affairs is that all of us are living in sick societies. Man's basic need is for significance and individuality, and he is living in a mass society of huge nations, industrial giants, wars, and economic upheavals, in relation to which he feels lost, insecure, meaningless, nobody. The small community of the village, the workshop, the family, is breaking up, and modern society is a collectivity of anonymous people, shifting here and there, with no "home," no place where one belongs—in the words of an eminent anthropologist, society is "a lonely crowd."

Psychiatry, too, may not be blameless, since for many years the goal preached by psychiatrists has been that of "adjustment." Dr. Lindner says of education, social work, religion, and psychiatry, that "each is infused with the rot-producing idea that the salvation of the individual, and so of society, depends upon conformity and adjustment." Instead of trying to produce people with characters of their own, we are attempting to produce conformists, and our sole criterion of "normality" is whether an individual adjusts or not—this in relation to a society which is not itself "normal." The delinquents and neurotics are those who rebel against the conformity we have imposed upon them—"like all prisoners, they are mutineers in their hearts."

Whether or not Dr. Lindner's diagnosis is valid it deserves to be seriously considered, because there can be little doubt that the psychiatrist's goal of "adjustment" may be a dangerous one. If one "adjusts" to a totalitarian tyranny is one entitled to be called "normal"?

# Gazetteer of the World

Providing a complete index to the maps and  
describing the more important places throughout  
the world

## Appendices

The British Commonwealth of Nations	380-81	Cross section of a typical frontal depression	383
Chart of sea areas used in weather forecasts	382	Longest rivers, largest lakes, highest mountains, largest conurbations.	384

# Gazetteer of the World

This edition of the gazetteer has been revised from standard and authoritative sources. For the population figures the latest censuses have been used, where available, and where not available, the latest official estimates.

An endeavour has been made to include all the more important places throughout the world. The small scale of the maps included in the Cyclopædia does not enable all places included in the gazetteer to be named on the maps.

In regard to the spelling of place names, the general principle followed has been to adopt national spellings. For those countries where the Latin Alphabet is not used, the principles for transliteration laid down by the "Permanent Committee on Geographical Names" of the Royal Geographical Society have been followed. There may be a few instances where the spelling shown on the map does not conform to that used in the gazetteer.

## ABBREVIATIONS USED IN THE GAZETTEER

### GEOGRAPHICAL NAMES

*Ala.* = Alabama.  
*Ark.* = Arkansas.  
*A.S.S.R.* = Autonomous Soviet Socialist Republic.  
*Atl. Oc.* = Atlantic Ocean.  
*B.C.* = British Columbia.  
*Brit.* = British.  
*Cal.* = California.  
*Col.* = Colorado.  
*Conn.* = Connecticut.  
*Del.* = Delaware.  
*Eng.* = England.  
*E.R.* = East Riding.  
*Fla.* = Florida.  
*Fr.* = French.  
*Ill.* = Illinois.  
*Ind.* = Indiana.  
*Ga.* = Georgia.  
*Kan.* = Kansas.  
*Ky.* = Kentucky.  
*La.* = Louisiana.

*Manch.* = Manchuria.  
*Mass.* = Massachusetts.  
*Md.* = Maryland.  
*Mé.* = Maine.  
*Mich.* = Michigan.  
*Minn.* = Minnesota.  
*Miss.* = Mississippi.  
*Mo.* = Missouri.  
*Mont.* = Montana.  
*N.B.* = New Brunswick.  
*N.C.* = North Carolina.  
*N.D.* = North Dakota.  
*Neth.* = Netherlands.  
*N.H.* = New Hampshire.  
*N.J.* = New Jersey.  
*N.M.* = New Mexico.  
*N.R.* = North Riding.  
*N.Y.* = New York.  
*N.Z.* = New Zealand.  
*O.F.S.* = Orange Free State.  
*Okl.* = Oklahoma.

*Ore.* = Oregon.  
*Pac. Oc.* = Pacific Ocean.  
*Penns.* = Pennsylvania.  
*R.I.* = Rhode Island.  
*R.S.F.S.R.* = Russian Soviet Federal Socialist Republic.  
*S.C.* = South Carolina.  
*Scot.* = Scotland.  
*S.D.* = South Dakota.  
*S.S.R.* = Soviet Socialist Republic.  
*Tenn.* = Tennessee.  
*U.S.S.R.* = Union of Soviet Socialist Republics.  
*Va.* = Virginia.  
*Vt.* = Vermont.  
*W.I.* = West Indies.  
*W.R.* = West Riding.  
*Wyo.* = Wyoming.

Abbreviations of names of Counties in *Gt. Britain* and *Rep. of Ireland* are those recognised by the General Post Office.

### OTHER ABBREVIATIONS

*a.* = area.  
*agr.* = agriculture.  
*alt.* = altitude.  
*arch.* = archaeological.  
*approx.* = approximate.  
*ass.* = associated.  
*bdy.* = boundary.  
*bdg.* = building.  
*bor.* = borough.  
*C.* = cape.  
*c.* = city.  
*can.* = canton.  
*cap.* = capital.  
*cas.* = castle.  
*cath.* = cathedral.  
*ch.* = chief.  
*co.* = county.  
*co. bor.* = county borough.  
*col.* = colony.  
*colly.* = colliery.  
*comm.* = commercial.  
*coast.* = coast.  
*cty.* = country.  
*dep.* = department.  
*dist.* = district.  
*div.* = division.  
*E.* = east.  
*estd.* = estimated.

*F.* = firth.  
*fed.* = federal.  
*fortfd.* = fortified.  
*ft.* = feet.  
*G.* = gulf.  
*gd.* = good.  
*gr.* = great, group.  
*I.* = island.  
*impt.* = important.  
*inc.* = including.  
*industl.* = industrial.  
*Is.* = islands.  
*L.* = lake.  
*lge.* = large.  
*lgst.* = largest.  
*m.* = miles.  
*mftg.* = manufacturing.  
*mkt.* = market.  
*mnfs.* = manufactures.  
*mt.* = mount.  
*mtn.* = mountain.  
*mun.* = municipality.  
*mun. bor.* = municipal borough.  
*N.* = north.  
*nat.* = national.  
*nr.* = near.  
*p.* = population.  
*par.* = parish.

*parlt.* = parliament.  
*parly.* = parliamentary.  
*prot.* = protectorate.  
*prov.* = province.  
*pt.* = port.  
*R.* = river.  
*rep.* = republic.  
*residl.* = residential.  
*rly.* = railway.  
*rural dist.* = rural district.  
*S.* = south or southerly.  
*sm.* = small.  
*spt.* = seaport.  
*sq. m.* = square miles.  
*St.* = Saint.  
*st.* = state.  
*sta.* = station.  
*sub.* = suburb.  
*t.* = town.  
*terr.* = territory.  
*tr.* = trade.  
*trib.* = tributary.  
*univ.* = university.  
*urb. dist.* = urban district.  
*vil.* = village.  
*W.* = west.  
*wat. pl.* = watering place.  
*wks.* = works.

*Land* = administrative division of *W. Germany* approx. corresponding to "province".

## A

*Aabenraa, spt.*, S.E. Jutland, Denmark; at head of Aabenraa fjord; exports dairy products; mnfs. agr.-machinery, diesel engines; p. (1940) 10,816.

*Aachen, t., Land N. Rhine-Westphalia, Germany*; formerly Aix-la-Chapelle; one of the oldest cities in Germany, cath., famous baths; suffered badly from bombing in Second World War and was first large German town to be taken by the

Allied Forces in 1944; engineering, textiles, electrical equipment; spa; p. (1950) 129,311.  
*Aalborg, c., spt.*, Jutland, Denmark; shipbuilding, fishing; airport; p. (1950) 79,806.

*Aalst, see Alost.*

*Aar, R.*, Switzerland, flows through Brienz and Thun lakes, and thence into the Rhine, 181 m.; famous Aar gorges above Meiringen.

*Aarau, t.*, Aargau can., Switzerland; silk, precision tools, cotton, cement; p. 13,204.

*Aarburg, t.* on *R. Aar*, Switzerland.

- Aargau, can.,** N. Switzerland; a. 542 sq. m.; extensive vineyards; p. (1950) 300,782.
- Aarhus, c.,** principal spt. on E. coast of Jutland, Denmark; famous Gothic cath.; coal, iron, grain, engin., textile indus.; p. (1950) 116,167.
- Abaco, Gt.,** Bahama Is., W. Indies; p. (1943) 3,461.
- Abadan, t.,** Persia, oil refineries; exp. petroleum; p. (1945) c. 130,000.
- Abancay, t.,** Apurimac, Peru; sugar; p. (1947) 5,789.
- Abano, t.,** N. Italy; sulphur water and mud baths. Abbazia, see Opatija.
- Abbeville, mfg. c.,** on the R. Somme (N. France); woollens, velvets, cottons, linens, serges, hosiery, etc.; connected with Paris and Belgium by canals; p. (1946) 16,780.
- Abbeyleix, t.,** Laoighis, Ireland; quarries.
- Abbiatragrasso, t.,** Milano, N. Italy; mkt. and indusl. centre; p. 16,259.
- Abbotsbury, par.,** Dorset, Eng.; world-famous swannery.
- Abbots-Langley, vil.,** Herts, Eng., birthplace of Nicholas Breakspere (Adrian IV); the only Englishman ever raised to the Papacy; p. 4,200.
- Abokuta, t.,** Nigeria; palm oil, hardwoods; p. (1946) 56,600.
- Aberavon, t.,** Glamorgan, Wales; on R. Avon, 8 m. E. of Swansea; large coal and iron industries, tin works; good harbour, Port Talbot; p. 1,273.
- Abercorn, urb. dist.,** Monmouth, Eng.; coal and iron; p. (1951) 18,757.
- Aberchirder, burgh, Banff, Scot.;** p. (1951) 800.
- Abercorn, par.,** W. Lothian, Scot.; on the Forth; Roman wall built by Antoninus began here, and extended to Kirkpatrick on the Clyde; p. (1951) 806.
- Abercorn, t.,** Northern Rhodesia; trading station; p. 1,000.
- Aberdare, urb. dist.,** Glamorgan, Wales, on the R. Cynon; coal and iron industries; p. (1951) 40,916.
- Aberdeen, co.,** Scot.; mountainous; agriculture, oats, barley, turnips, cattle; fisheries; granite, brewing, distilling, paper; a. 1,970 sq. m.; p. (1951) 308,055.
- Aberdeen, c., burgh, Aberdeenshire, Scot.;** at mouth of R. Dee, 100 m. N.E. of Edinburgh; spt. esp. concerned with fishing and having variety of industries to supply its own region; granite-quarrying and polishing; p. (1951) 182,714.
- Aberdeen, t.,** S.D., U.S.A.; chemicals, foundry; p. (1950) 21,051.
- Aberdeen, spt.,** Wash., U.S.A.; lumbering, salmon canning; p. (1950) 19,653.
- Aberdour, par.,** Flfe, Scot.; sea-bathing noted; p. (1951) 1,939.
- Aberdovey, wat. pl.,** Merioneth, Wales, on estuary of R. Dovey.
- Aberfeldy, burgh, Perth, Scot.,** in Strath Tay, 4 m. below Loch Tay; mkt.; tourist centre; p. (1951), 1,523.
- Aberfoyle, par.,** Perth, Scot.; tourist resort; p. (1951), 1,133.
- Abergavenny, mun. bor., t.,** Monmouth, Eng., on R. Usk; coal, iron; p. (1951) 8,844.
- Abergele, urb. dist.,** Denbigh, Wales; small wat. pl.; p. (1951) 7,539.
- Aberlour, Charlestown of, burgh, Banff, Scot.;** on R. Spey, 12 m. S. of Elgin; p. (1951) 1,153.
- Abernethy, burgh, Perth, Scot.;** on R. Tay, once the cap. of the Pictish Kings; p. (1951) 675.
- Abersychan, par.,** Monmouth, Eng.; coal, iron, and steel; p. 25,748.
- Abertillery, urb. dist.,** Monmouth.; coal, tin works; p. (1951) 27,617.
- Aberystwyth, mun. bor., wat. pl.,** on Cardigan Bay at the mouth of the R. Ystwyth, Cardigan, Wales; univ. college; Nat. Library of Wales; p. (1951) 9,323.
- Abidian, cap.,** Ivory Coast, Fr. W. Africa; palm oil, cocoa, copra; p. (1948) 45,735.
- Abilene, t.,** Texas, U.S.A.; univ.; food products, oilseeds, oil refining; p. (1950) 45,570.
- Abingdon, mun. bor.,** Berks, Eng., on R. Thames; woollens, carpets; p. (1951) 10,176.
- Abingdon, t.,** Va., U.S.A.; lumbering, flour milling; mnfs, condensed milk, chemicals, tobacco; tourist resort; p. (1950) 4,709.
- Abington, t.,** Mass., U.S.A.; shoes, textiles, textile machinery; p. (1950) 7,152.
- Abitibi, R. and L.,** R. flows into James Bay, Ontario, Canada; gold dist.
- Abo, see** Turku, Finland.
- Abomey, old cap.,** Dahomey, Fr. W. Africa; former slave market; cotton; p. 12,000.
- Aboyne and Glentanner, par.,** Aberdeen, Scot.; holiday resort on R. Dee nr. Ballater; p. (1951) 1,651.
- Abraham, Plains of, nr. Quebec;** Wolfe's victory over French under Montcalm, 1759.
- Abram, urb. dist.,** Lancs, Eng.; coal, engineering, cotton mnfs.; p. (1951) 6,286.
- Abrantes, t.,** Portugal, on the Tagus R.; French won battle here in Napoleonic Wars, 1807; p. (1940) 11,339.
- Abud, t.,** Transylvania, Romania.
- Abruzzi and Molise, region of Italy** on the Adriatic, inc. provs. of Aquila, Chieti, and Campobasso, Teramo, a. 5,883 sq. m.; p. (1951) 1,682,808.
- Abu, mtn.,** N. Bombay, India, 5,653 ft.; Jain temples.
- Abukir or Aboukir, vil.** on Abukir Bay, Egypt; site of ancient Canopus; Battle of the Nile fought in the Bay, 1798.
- Abu Simbil, Egypt;** famous ancient temples cut out of solid rock by Rameses II.
- Abydos, ruined c.,** Upper Egypt, celebrated for its temple of Osiris.
- Abydos, ruined castled t.,** Anatolia on the Dardanelles, which desperately resisted Philip of Macedon, and famous for the love story of Leander and Hero.
- Abyssinia, see** Ethiopia.
- Acadia or Acadie, French name** applied to previous possessions S. of St. Lawrence R., inc. Nova Scotia and New Brunswick and part of Maine.
- Acacjutla, spt.,** Salvador, Central America; coffee.
- Acambaro, t.,** Mexico; rly. junction; p. 17,643.
- Acapulco, spt.,** Pacific coast Mexico; exports hides, cedar, fruit; p. 9,993.
- Acatlan de Osorio, t.,** Puebla st., central Mexico; p. 5,591.
- Acayucan, t.,** Veracruz st., Mexico; p. 5,143.
- Acra, spt.,** cap. of Gold Coast, W. Africa; exports cocoa; p. (1948) 125,456.
- Accrington, mun. bor., mfg. t.,** Lancs, Eng.; 20 m. N. of Manchester; cotton, dye works; p. (1951) 40,671.
- Acerra, t.,** S. Italy; destroyed by Hannibal 216 B.C.; restored 210 B.C.; olive oil, wine; p. 16,460.
- Achaia, prov.,** Greece; a. 2,000 sq. m.; with Elis prov. chief currant-producing dist.; spt., Patras; p. (1951) 228,274.
- Achill, i.,** Lead, off the W. Coast of Mayo, Ireland; p. 5,300.
- Acireale, spt.,** Sicily; sulphur baths; p. 36,871.
- Acklin, island,** Bahamas, W. Indies; p. (1948) 1,744.
- Acomita, vil.,** N.M., U.S.A.; on Acoma Indian Reservation; pottery making; p. 1,125.
- Aconagua, mtn.,** Andes, Argentine, S. America, highest peak of New World, alt. 22,835 ft.
- Aconagua, prov.,** Chile; a. 3,939 sq. m.; cap. San Felipe; alfalfa and Mediterranean fruits; p. (1952) 127,806.
- Aconquija, Sierra de, mtn. range,** N. Argentina, S. America; rises steeply from Chaco lowland to 18,000 ft.
- Acul, ancient walled t.,** N. Italy, prov. Alessandria; famous cath.; sulphur springs; p. 18,975.
- Acre (Akka), c., spt.,** Israel, famous for its sieges during Crusades and in 1799 withstanding Napoleon for 61 days; p. 14,000.
- Acre, terr.,** Brazil; a. 59,139 sq. m., cap. Rio Branco; rubber; p. (1947) 92,814.
- Acton, mun. bor.,** Middlesex, Eng.; residtl. and mfg. suburb of London; p. (1951) 87,424.
- Acushnet, t. Mass., U.S.A.,** 3 m. N. of New Bedford; p. (1950) 4,401.
- Ada, t.,** Oklahoma, U.S.A.; p. (1950) 15,995.
- Adamawa, prov.,** W. Africa, divided between Nigeria and the Cameroons; a. 70,000 sq. m.; ivory, groundnuts.
- Adams, mfg. t.,** Mass., U.S.A.; paper, cottons, woollens; p. (1950) 12,034.
- Adam's Bridge,** ridge of sand and coral reef, 30 m., between India and Ceylon. Proposed inter-dominion rly.
- Adam's Peak, sacred mtn.,** S. Ceylon, alt., 7,352 ft.
- Adana, t.,** Turkey; on R. Selhan; wool, cotton, grain; p. (1950) 117,799.

- Adapazari, t., Turkey;** rly junction: silk, linen: p. (1945) 29,386.
- Adda, R., N. Italy;** flows through L. Como to R. Po.
- Addis Ababa, cap. Ethiopia;** terminus of Jibuti rly.; p. (estd. 1953) 340,000
- Adelaide, c., *spt.*, cap., S. Australia;** on R. Torrens, which flows into G. of St. Vincent: transcontinental rly, connections and industries using wool, leather, iron: imports fuels, fertilisers: exports wheat, wool, wine, ores: p. (with suburbs) (1948) 300,000.
- Adelboden, t., Switzerland;** 19 m. S.W. of Interlaken: health resort, mineral springs.
- Adélie Land, Antarctica;** French terr. and dependency of Réunion.
- Adelsburg, t., Yugoslavia;** 20 m. N.E. of Trieste: extensive grotto and stalactite cavern.
- Aden, *spt.*, terr., Crown Col., S. Arabia;** t. stands on peninsula of Aden, is refuelling pt. and entrepôt for cotton, clothing, coffee, tobacco, etc.: Aden Terr. Inc. Perim I. and Kuria Muria Is., also administers Kamaran I.: a. 75 sq. m., p. (inc. Perim) (1946) 86,309.
- Aden Protectorate, S. Arabia;** comprises section of mainland stretching along G. of Aden and inland for about 100 m., also Sokatra I.: a. 112,080 sq. m.; p. (1952) 930,000.
- Aden, Gulf of, Arabian Sea;** length 480 m., breadth 180 m.
- Aderno, t., Sicily, Italy;** at base of Mt. Etna, ancient ruins.
- Adige, R. in N. Italy;** enters Adriatic N. of Po, length 240 m.
- Adigrat, t., Ethiopia;** near Eritrean border: p. 5,000.
- Adirondacks, mtns., N.Y., U.S.A.;** highest peak, Mt. Marcy, 5,345 ft.
- Adlington, urb. dist., Lancs., Eng.;** nr. Chorley: cotton: p. (1951) 3,998.
- Admiralty G., N.W. of Western Australia.**
- Admiralty I., off Alaska mainland;** belongs to U.S.A.; coal, copper, timber.
- Admiralty Is., S. Pacific Ocean, N.E. of New Guinea,** comprise some 40 small islands: coconuts, pearl fisheries: a. 663 sq. m.; p. 13,134.
- Adonara, I., one of Lesser Sunda Is., Indonesia;** p. (1930) approx. 25,000.
- Adoni, t., Madras, India;** cotton market.
- Adour, R., S.W. France;** rises in Pyrenees, enters Bay of Biscay below Bayonne: length 207 m.
- Adowa, t., cap., Tigre prov., N. Ethiopia;** alt. over 6000 ft., tr. and mkt. centre: p. (1945) 11,500.
- Adra, *spt.*, t., Almería, S. Spain;** sugar-cane works: nr. Guardia Vieja salt beds.
- Adramyti, t., Turkey;** on trade route to Bandirma: wine, olive oil.
- Adrano, t., Sicily, Italy;** at S.W. foot of Etna: agr. mkt.: p. (1936) 24,307.
- Adrar, oasis, Sahara Desert, Mauritania, Fr. W. Africa;** salt, dates, grain.
- Adria, mkt. t., prov. Rovigo, Italy;** formerly on coast, now 14 m. inland, old Etruscan c.: p. 31,025.
- Adrian, c., Michigan, U.S.A.;** 73 m. W. of Detroit: p. (1950) 18,393.
- Adrianople, see Edirne.**
- Adriatic Sea, branch of the Mediterranean,** between Italy and Balkan Peninsula: forms G. of Venice on the N.: chief trading ports, Venice, Trieste, and Ancona on the N., Brindisi and Durres on the S.: a. 52,000 sq. m., length 450 m.
- Adullam or Aidelma, former dist., Palestine;** S.E. Jerusalem. Site of Canaanite city: cave, David's hiding place from King Saul.
- Adwick le Street, urb. dist., W.R. Yorks., Eng.;** coal: p. (1951) 18,808.
- Adzhar, rep., U.S.S.R.;** grain, cotton, tobacco: chief town Batumi: p. 169,946.
- Aegades, group of rocky Is. off W. coast of Sicily;** ch. t. Favignana on I. of that name.
- Aegean Is., between Greece and Turkey;** called the Grecian Archipelago, inc. Crete, Cyclades, Sporades and Dodecanese: a. 1,506 sq. m.; p. (1951) 280,827.
- Aegean Sea, branch of the Mediterranean;** studded with Is., between Greece and Turkey: connected through the Dardanelles with Sea of Marmara and thence through the Bosphorus Strait with the Black Sea. fisheries.
- Aegina, I., Greece;** in G. of same name, sponge
- Aerø, I. in the Baltic off Denmark.**
- Aetolia and Acarnania, prov., N. Greece;** cap. Missolonghi: p. (1951) 220,208.
- Affric, Glen, Inverness, Scot.;** 30 m. S.W. of Inverness: hydro-electric scheme, opened 1952.
- Afghanistan, mountainous *cty.*, Asia;** monarchy: chief towns, Kabul, Herat, Kandahar: principal rivers, Kabul and Helmand; climate, intense summer heat, severe winter cold, scanty rainfall: races, Afghans, aboriginal hill-tribes: languages, official Persian, spoken Pushtu; religion, Islam: cereals, fruit, sheep, horses, camels: industries, carpets, woollens, silks: a. 245,000 sq. m.; p. (estd.) 11 to 12 million.
- Africa, second largest continent;** bounded on N. by Mediterranean, by Red Sea and Indian Ocean on E., by Atlantic Ocean on W.; adjoins Asia at Isthmus of Suez. Deserts in N., forests in centre, and lofty plateaux and veldts in S. Highest mtn., Kilimanjaro, 19,324 ft.; chief rivers, Nile, Congo, Niger, Zambesi: largest L., Victoria. Caernarvon, *t.*, *mun. bor.*, *cap.*, Caernarvonshire, N. Wales; on S. shore of Menai Strait; cas. where first Prince of Wales (Edward II) was christened; slate; *p.* (1951) 9,255.

Caernarvonshire, *mtinous. marit. co.*, N. Wales; slate and stone quarries, lead mines; oats, barley, sheep, cattle; highest peak, Snowdon (3,560 ft.); *a.* 569 sq. m.; *p.* (1951) 124,074.

Caerphilly, *t.*, *urb. dist.*, Glamorgan, S. Wales; cas.; busy coal and iron centre; malting; *p.* (1951) 35,194.

Caesarea, *t.*, on coast of Israel; once the official residence of the Herods and Roman Governors of Palestine.

Caesarea Mazaca, Turkey; once residence of Kings of Cappadocia; now trading centre.

Caeté, *t.*, Minas Geraes st., Brazil; at foot of Serra do Espinhaco, 50 m. E. of Belo Horizonte; lge. iron and steel works.

Cagayan, *prov.*, Luzon, Philippine Is.; *p.* 346,700.

Cagli, *t.*, *prov.* of Pesaro and Urbino, Italy; *p.* 12,145.

Cagliari, Italian *prov.*, comprising S. half of Sardinia; *a.* 5,179 sq. m.; *p.* (1951) 667,355.

Cagliari, *spt.*, *cap.*, Sardinia, S. end of I.; cath. and *univ.*; exports lead, zinc; *p.* (1951) 137,032.

Cagnes-sur-Mer, *t.*, Alpes-Maritimes dep., France; Riviera resort; *p.* 7,866.

Caha, *mtns.*, on boundary of Cork and Kerry, Ireland; cas.; highest pt. 2,249 ft.

Caher, *t.*, Tipperary, Ireland; on R. Suir; ancient cas. and abbey.

Cahiriveen, *t.*, Kerry, Ireland; on R. Valencia.

Cahors, *t.*, *cap.*, Lot, France; cath.; distilleries, shoe factories; *p.* (1946) 15,345.

Caibarien, *t.*, Cuba; sugar-shipping port.

Caicos Is., see Turks and Caicos Is.

Cairngorm, *mtn.*, Inverness and Banff, Scot.; alt. 4,084 ft.

Cairns, *spt.*, Queensland, Australia; on Trinity Bay; fine sugar, tropical fruit growing, dairying, and mining; *p.* (1947) 16,641.

Cairnroul, *mtn.*, Inverness and Aberdeen, Scot.; alt. 4,241 ft.

Cairo, *c. cap.*, Egypt; on R. bank of Nile at head of Nile delta; *univ.*; tourist centre; mnfs. cotton, paper, silk; *p.* (1947) 2,100,506.

Cairo, Ill., U.S.A.; confluence of Mississippi and Ohio; extensive traffic; *p.* (1950) 12,123.

Caister, *vil.*, N. of Yarmouth, Norfolk, Eng.; ruined cas.; holiday resort.

Caithness, *co.*, Scot.; most N. part of mainland; mountainous; herring fishery; poor agr.; quarrying; ch. ts. Wick, Thurso; *a.* 686 sq. m.; *p.* (1951) 22,705.

Caivano, *indust. t.*, Italy; N.E. of Naples.

Cajalco Reservoir, S. Cal., U.S.A.; hill-top location nr. Riverside, 55 m. S.E. of Los Angeles; stores water brought 242 m. by aqueduct from Parker Reservoir on R. Colorado, for distribution throughout Los Angeles plain.

Cajamarca, *dep.*, N. Peru; mining and agr.; *a.* 12,538 sq. m.; *p.* (1947) 639,942.

Cajamarca, *t.*, *cap.*, Cajamarca prov., Peru; cottons, woollens, silver; *p.* (1947) 18,324.

Calabar, *spt.*, S.E. Nigeria, Brit. W. Africa; exports palm oil, kernels, rubber, ivory; *p.* 16,653.

Calabozo, *t.*, N. Venezuela, S. America; cattle, agr., *tr.* centre; *p.* 7,123.

Calabria, *region.*, extreme S.W. Italy; mountainous and fertile; highest point Mt. Pollino 7,325 ft.; ch. R. Crati; cereals, wine, olives, fruit; copper, marble; tunny fish; *a.* 5,830 sq. m.; *p.* (1951) 2,042,690.

Calafat, *t.*, Romania; on Bulgarian frontier, opp. Vidin.

Calahorra, *t.*, Logrono, Spain; cath.; fruit, wine; on R. Ebro; *p.* 13,199.

Calais, *spt.*, Pas de Calais, N.E. France; cross-channel ferry pt. opposite to and 21 m. distant from Dover; lace, fishing; *p.* (1946) 50,048.

Calais Maine, *t.*, U.S.A.; sawmills and shipyards; *p.* (1950) 4,589.

Calama, *oasis.*, Autogagasta prov., N. Chile; in Atacama Desert at foot of Andean Cordillera, 130 m. N.E. of Autogagasta on main railway to La Paz; water from R. Loa supplies Autogagasta and used for irrigation locally; cotton, wheat, vegetables; *p.* 4,967.

Calamar, *t.*, Bolivar dep., Colombia; on R. Magdalena 60 m. from mouth, also connected by rail to *spt.* Cartagena; handles traffic between Cartagena and Magdalena valley.

Calamianes Is., Philippine Is.; between Mindoro and Palawan Is.

Calañas, *commune.*, S. Spain; pyrites, olives; *p.* 11,285.

Calaras, *t.*, S.E. Romania; on the Danube; commercial centre; *p.* 17,890.

Calasiao, *t.*, Luzon, Philippines; hats; *p.* 19,325.

Calatafimi, *commune.*, Sicily; Garibaldi defeated Neapolitans, May 1860; *p.* 11,484.

Calatayud, *t.*, Spain; 55 m. S.W. Saragossa; cas.; *p.* 18,419.

Calbayog, *t.*, Samar, Philippine Is.; hemp trade, fisheries.

Calcutta, *c. spt.*, W. Bengal, India; on R. Hoogli; vast trade from Ganges plain; *univ.*; jute-mills; exports jute, cotton, sugar-cane, rice, tea, silk, coal; *p.* (with suburbs) (1951) 2,548,677.

Caldas, *dep.*, Colombia, S. America; *cap.* Manizales; *a.* 5,160 sq. m.; *p.* (1947) 1,006,390.

Calder, *t.*, S.W. Midlothian; shale mines, oilwks.; *p.* 3,200.

Calder, R., Lancs, Eng.; joins the Ribble.

Calder, R., W.R. Yorks, Eng.; trib. of Aire R.

Caldera, *spt.*, Atacama, Chile; *p.* 1,525.

Caldwell, *t.*, Idaho, U.S.A.; *p.* (1950) 10,487.

Caldy I., off Pembroke coast, Wales; lighthouse; monastery.

Caledonian Canal, from Moray Firth to Loch Linnhe, Scot., connecting North Sea with Atlantic; 62½ m. long; opened in 1822.

Calera, *t.*, Chile; rly. junction; *p.* 8,426.

Calf of Man, *sm. I.*, S.W. I. of Man, Eng.; *a.* 620 acres.

Calgary, *prin. t.*, Alberta, Canada; centre of ranching country; lumber-mills, tanneries; *p.* (1951) 126,631.

Call, *t.*, *cap.*, Valle del Cauca, Colombia; on Cauca R.; coal, coffee, copper; *p.* (1951) 243,463.

Calicut, see Kozhikode.

California, most important of Pacific States, U.S.A.; mountainous and forested but fertile valleys; salubrious climate; rich in minerals, oil, natural gas, gold, silver, copper; oil refining; films; fruit; *cap.* Sacramento; chief port San Francisco, largest *c.* Los Angeles; has 279 incorporated cities; *a.* 158,693 sq. m.; *p.* (1950) 10,533,223.

- California Current. E. Pac. Oc.; flows N. to S. along cst. of Ore., and Cal., U.S.A.; relatively cold water; reduces summer temperatures and causes fog in cst. areas especially nr. San Francisco.
- California, G. of, Mexico; 700 m. long; inlet of Pacific Ocean.
- California, Lower, terr., Mexico; between Gulf of C. and Pacific; cap. La Paz; chiefly a sterile region; some mineral wealth; a. 55,654 sq. m.; p. 130,378.
- Calimere Point, most S. point of Coromandel Coast, India.
- Calistoga, t., Cal., U.S.A.; tr. centre, wine, grapes; hot springs; p. 1,124.

Cwmbran, *t.*, Monmouth, Eng.: in valley of Avon-Lwyd, 5 m. N. of Newport; one of "New Towns" designated 1946; comprises bulk of Cwmbran *urb. dist.* and extends N. towards Pontypool; p. (1951) 13,659.

Cyclades, group of about 220 *is.* Grecian arch.; ch. *t.* Hermoupolis (Syra.); a. 1,023 sq. m.; p. (1951) 121,256.

Cyprus, *i.*, Brit. col., E. Mediterranean; 40 m. from Anatolia, 60 m. from Syria; cap. Nicosia; salt, iron, copper, agr., sponge fishing; a. 3,572 sq. m.; p. (1953) 506,000.

Cyrenaica, *see* Libya.

Czechoslovakia, *cty.*, Central Europe; rep. comprising Bohemia, Moravia, Slovakia, Silesia; by decree December 21st, 1948, these provinces have been abolished; country divided into 19 regions; mtns.; fertile valleys; agr.; potatoes, sugar-beet, cereals, lumbering; coal, iron, granite, beer distilling, sugar, textiles, glass, stoneware, machinery, chemicals; cap. Praha (Prague); a. 49,355 sq. m.; p. (1947) 12,164,661.

Czeladz, *t.*, S.W. Poland; coal; p. 21,035.

Czernowitz, *see* Chernovitsy.

Czestochowa, *indust. t.*, Kielce, S. Poland; on Warta R.; old pilgrimage monastery; cottons, paper; p. (estd. 1950) 115,084.

Czirknitzer (Zirknitzer), *L.*, with island in Carniola, Yugoslavia, S. of Ljubljana, 6 m. long; extraordinary variations in depth.

Czortkow, *t.*, W. Ukraine, U.S.S.R.; agr., tobacco, brandy; p. (1939) 19,038.

## D

Daanbantayan, *mun.*, N. Cebu, Philippine Is.; rice, sugar; p. 24,198.

Dabhoi, *t.*, Madras st., India; architectural remains; p. 18,166.

Dabrowa, *t.*, Poland; 38 m. N.W. of Kraków; coal-mining.

Dacca, *c.*, *cap.*, E. Bengal, Pakistan; on Buriganga R., an old channel of the Ganges; jute, muslin; p. (1951) 276,033.

Dachstein, *mtn.*, Salzammergut, Austria; alt. 9,830 ft.

Dade City, *t.*, Fla., U.S.A.; centre of mkt. gardening and citrus region; kaolin; p. (1950) 3,806.

Dagenham, *t.*, *mun. bor.*, Essex, Eng.; on N. bank of R. Thames, 10 m. E. of London; motor cars; p. (1951) 114,588.

Dagestan, Caucasian prov. of R.S.F.S.R., U.S.S.R.; one of the most mountainous dists. in the world; cap. Makhachkala; cotton, orchards and vineyards; machinery, engineering; a. 13,124 sq. m.; p. (1950) 977,800.

Dago (Hiiumaa), *i.*, Estonia, at entrance G. of Finland.

Dagupan, *t.*, Pangasinan, Luzon, Philippines; on Lingayen Bay; p. 22,600.

Dahlak Archipelago, group of islands in Red Sea, nr. Massawa; pearl fishing.

Dahomey, *col.*, Guinea Coast, Fr. W. Africa; forests, palm-oil; cap. Porto Novo; a. 43,232 sq. m.; p. (1945) 1,458,000.

Daimiel, *t.*, Ciudad Real, Spain; p. 18,412.

Dairen, *c.*, on Liaotung Peninsula, China; former treaty port; built by Russia; p. (estd. 1946) 722,950; *see* Lüta.

Dakar, *fort. naval stn.*, Senegal, Fr. W. Africa; airport for S. America; a. (of Dakar and dependencies, of Gorée and Rufisque) 60 sq. m.; p. (1945) 175,000.

Dakhla, *oasis*, Libyan Desert, Egypt; 170 m. S.W. of Asyut; dates, olives; stage on caravan route from Cyrenaica to Upper Egypt.

Dakovica, *t.*, Yugoslavia; 80 m. E. of Cetinje; p. 8,000.

Dakota, *R.*, *trib.*, of Missouri R., U.S.A.

Dal, *R.*, S. Central Sweden; length 325 m.

Dalaguete, *t.*, Cebu, Philippines; sugar, maize; p. 30,000.

Dalbeattie, *burgh*, Kircudbright, Scot.; nr. Dumfries; granite; p. (1951) 3,288.

Dalby, *t.*, Queensland, Australia; pastoral, agr., dairying, cotton-growing, and timber dist.; p. 4,383.

Dalhousie, *health resort*, Chamba, Himachal Pradesh, India; 7,687 ft. above sea-level.

Dalhousie, *spt.*, N.B., Canada; lumber, lobsters, salmon; resort; p. 4,508.

Dalkeith, *burgh*, Midlothian, Scot.; 6 m. S.E. of Edinburgh; coal; ironwks.; p. (1951) 8,786.

Dalkey, *t.*, Wicklow, Ireland; on E. cst., 5 m. S.E. of Dublin; seaside resort; residtl.; p. (1946) 4,135.

Dallas, *c.*, Texas, U.S.A.; in cotton and grain-growing region; machinery, aeroplanes; p. (1950) 434,462.

Dalmatia, *dist.*, N.E. Adriatic coast, Yugoslavia; limestone (Karst) plateaux; olive oil, wine; a. 4,916 sq. m.; p. 622,000.

Dalmellington, *par.*, Ayr, Scot.; iron, coal; p. (1951) 7,094.

Dalmeny, *par.*, W. Lothian, Scot.; oil shale; p. (1951) 3,691.

Dalry, *par.*, Ayr, Scot.; 6 m. N.E. of Ardrossan; iron, woollens; p. (1951) 6,764.

Dalton, *t.*, N. Ga., U.S.A.; cotton and sawmills; p. (1950) 15,963.

Dalton-in-Furness, *t.*, *urb. dist.*, N. Lancs., Eng.; iron-ore mining, stone quarrying; abbey ruins; p. (1951) 10,394.

Daly, *R.*, N. Terr., Australia; flowing into Anson Bay.

Damanhur, *t.*, Egypt; on E. margin of Nile delta, 25 m. S.E. of Alexandria; mkt. for local agricultural produce; p. (1947) 84,983.

Damão, or Daman, *spt. and terr.*, W. India; 100 m. N. of Bombay; Portuguese; fishing, ship-building, cotton; p. 60,000.

Damaraland, formerly part of German S.W. Africa now administered by Union of S. Africa; only port, Walvis Bay; cattle rearing.

Damascus, *cap.*, Syria; 57 m. S.E. of its port, Beirut; claims to be oldest living city in world; metal-work; taken in Allenby's advance, Oct., 1918; p. (estd. 1950) 335,060.

Dambovitza, *R.*, Romania; rises in Mt. Omul (Transylvanian Alps), flows S. through Bucharest to R. Danube; flows through impt. oilfields; length 150 m.

Damghan, *t.*, N. Persia; nr. Caspian Sea; p. 16,500.

Damietta, *t.*, Nile Delta, Egypt; cotton; p. (1947) 53,620.

Damoh, *t.*, N. Madhya Pradesh, India; agr. centre and mkt.; p. (1941) 20,728.

Dampier, *spt.*, W. Australia; mouth of Fitzroy R.

Dampier Archipelago, group of *sm. is.*, off N.W. Australia.

Dampier Strait, channel between N.W. of New Guinea and Waigau I.

Dampier Strait, Bismarck archipelago, between Umbel, and New Britain.

Dampremy, *commune*, Hainault, Belgium; coal; p. 13,373.

Danakil or Dankali Country, Eritrea; coast land between Red Sea and Ethiopia (Abyssinia).

Danao, *t.*, Cebu, Philippines; rice and sugar dist.; p. 25,000.

Danbury, *t.*, Conn., U.S.A.; hat-making industry since 1780; p. (1950) 22,067.

Dandenong, *t.*, Victoria, Australia; 18 m. from Melbourne; centre of dairy and mkt.-gardening dist.; veg. dehydration; p. 6,000.

Dannemora, *t.*, Sweden; 25 m. N.E. of Uppsala; iron ore worked since 1579; p. 1,062.

Dannevirke, *t.*, N. I., New Zealand; p. (1951) 4,649.

Dansalan, *chartered c.*, cap. of Lanao prov., Philippine Is.; summer resort; p. 11,319.

Danube, *R.*, second longest r. in Europe; rises in Black Forest, Germany, and flows E. into Black Sea; navigation for steamers from Ulm to the sea; Vienna, Budapest, Belgrade, and other large cities on its banks; length 1,750 m.

Danville, *c.*, Ill., U.S.A.; coal; p. (1950) 37,864.

Danville, *t.*, Ky., U.S.A.; mkt. for tobacco, hemp; horses; p. (1950) 8,686.

Danville, *c.*, Virginia; cotton, tobacco; p. 38,000.

Danzig, *see* Gdansk.

Darbhanga, *t.*, Bihar, India; rice, oil-seeds, grain, sugar; p. (1941) 69,003.

Dardanelles, *strait* between Europe and Turkey, connecting Aegean Sea with Sea of Marmara; (the ancient Hellespont), 40 m. long.

Dar-es-Salaam, *spt.*, *cap.*, Tanganyika Trust Terr., E. Africa; p. (1952) 99,140.

- Dartur**, *prov.*, Anglo-Egyptian Sudan, N.E. Africa; between Kordofan and Wadal; inhabited by Arabs and Negroes; cap. El Fasher; a. 138,150 sq. m.; p. (1947) 882,800.
- Darjeeling**, *hill t.*, Bengal, India; tea, quinine; has suffered from earthquake and landslips; p. 25,873.
- Darlston**, *urb. dist.*, Staffs, Eng.; coal and iron-wks.; p. (1951) 22,024.
- Darling**, *R.*, N.S.W. Australia; rises in Gt. Dividing Range, flows S.W. into Murray R. at Wentworth; length 1,702 m.
- Darling Downs**, *plateau*, S.E. Queensland, Australia; grazing country; ch. t. Toowoomba.
- Darling Range**, *mins.*; granite range; great grazing country of W. Australia; parallel with coast, highest peak, 3,500 ft.
- Darlington**, *t.*, co. bor., Durham, Eng.; coal, engineering; p. (1951) 84,861.
- Darlington**, *t.*, S.C. U.S.A.; tr. centre., agr., cotton goods, tobacco; p. (1950) 6,619.
- Darmstadt**, *t.*, Germany; on Darm E.; iron, machinery, chemicals; p. 115,000.
- Dart**, *R.*, Devon, Eng.; rises in Dartmoor, flows S. into English Channel at Dartmouth; length 46 m.
- Dartford**, *mkt. t.*, mun. bor., Kent, Eng.; nr. S. est. of Thames estuary 15 m. E. of London; chemical wks.; p. (1951) 40,544.
- Dartmoor**, *high stony plateau*, S.W. Devon, Eng.; granite; kaolin mines; pasture for sheep and ponies; convict prison; a. 220 sq. m.; highest point, Yes Tor, 2,028 ft.
- Dartmouth**, *spt.*, mun. bor., S. Devon, Eng.; on W. of estuary of R. Dart; Royal Naval College; p. (1951) 5,842.
- Dartmouth**, *t.*, Nova Scotia; p. (1951) 15,037.
- Dartmouth**, *t.*, Mass., U.S.A.; p. (1950) 11,115.
- Dartmouth**, *pt.*, Richmond Bay, Prince Edward I., Canada.
- Darton**, *urb. dist.*, W.R. York., Eng.; nr. Barnsley; coal; p. (1951) 14,400.
- Darvel**, *burgh*, Ayr, Scot.; on R. Irvine, 8 m. E. of Kilmarnock; curtains, carpets; p. (1951) 3,237.
- Darwen**, *t.*, mun. bor., N.E. Lancs., Eng.; on flank of Rossendale Fells, 3 m. S. of Blackburn; cottons, blast furnaces; p. (1951) 30,827.
- Darwin**, *t.*, spt., N. Terr., Australia; landing place of world airlines—England to Australia; p. 2,538.
- Datchet**, *t.*, Bucks, Eng.; adjoining Windsor, on R. Thames; p. 2,400.
- Datia**, *t.*, Madhya-Bharat, India; stone-walled, palaces; p. (1941) 13,232.
- Datteln**, *commune*, Westphalia, Germany; coal, leather, chemicals, wine; p. 20,114.
- Daugavpils**, *t.*, Latvia, U.S.S.R. on Dvina R.; timber; p. (1935) 45,160.
- Dauphiné**, *old prov.*, S.E. France; now depts. Isère, Drôme, and Hautes-Alpes.
- Dayao**, *t.*, Mindanao, Philippines; p. (1948) 111,263.
- Davenport**, *c.*, Iowa, U.S.A.; at foot of Rock I.; rapids; on Mississippi R.; flour mills; p. (1950) 74,549.
- Daventry**, *t.*, *urb. dist.*, Northampton, Eng.; on Northampton Heights, 9 m. S.E. of Rugby; boot-making; wireless transmission station; p. (1951) 4,078.
- Davis Strait**, *channel* between Greenland and Baffin Land, N.W. Terr., Canada; connects Atlantic with Baffin Bay.
- Davos Platz**, *Alpine winter resort*, Grisons, Switzerland; alt. 4,845; p. 9,259.
- Dawley**, *urb. dist.*, Shropshire, Eng.; on S.E. flank of The Wrekin; ironwks.; p. (1951) 8,369.
- Dawlish**, *t.*, *urb. dist.*, S. Devon, Eng.; on S. est. between estuaries of Rs. Exe and Teign; sea-side resort; p. (1951) 7,512.
- Dawson**, *cap.*, Yukon Terr., Canada; on Yukon R., nr. the Klondyke goldfields; p. (1951) 783.
- Dax**, *t.*, Landes, S.W. France; on Adour R.; hot sulphur spring; horse mart; p. (1946) 14,113.
- Daylesford**, *t.*, Victoria, Australia; 75 m. from Melbourne; tourist resort, gold-mining, wheat; p. 3,100.
- Dayton**, *t.*, Ohio, U.S.A.; on Great Miami R.; aeroplanes, electrical machinery; p. (1950) 243,872.
- Dayton**, *t.*, Wash., U.S.A.; fruit and vegetable canning, sawmills; exports wheat apples; p. (1950) 2,979.
- De Aar**, *t.*, *riv. junction*, C. of Good Hope, S. Africa; 500 m. from Cape Town; rlys. from N.W. (Luderitz, Walvis Bay) and S.E. (Pt. Elizabeth, E. London) join Capetown to Johannesburg trunk rly.; p. 9,137.
- Dead Sea**, *salt-water L.* between Israel and Jordan; surface 1,286 ft. below level of the Mediterranean; a. 340 sq. m., length 47½ m., greatest width 9½ m., greatest depth 1,309 ft.; receives waters of Jordan; high mineral content.
- Deal**, *mun. bor.*, ancient spt., E. Kent, Eng.; on S.E. est., 7 m. N.E. of Dover; opposite Goodwin Sands; seaside resort; Julius Caesar is said to have first landed near; p. (1951) 24,276.
- Dean**, Forest of, Gloucester, Eng.; between Wye and Severn Rs.; coal-mining.
- Dearborn**, *t.*, Michigan, U.S.A.; p. (1950) 94,994.
- Death Valley**, *depression*, Cal., U.S.A.; in Mohave Desert, 150 m. N.E. of Los Angeles; completely arid; floor covered with saline deposits; tourist attraction; depth of valley floor 276 ft. below sea-level.
- Deauville**, *t.*, spt., Calvados, France; on S. shore of Seine estuary; seaside resort; p. 5,000.
- Debar**, *t.*, Yugoslavia; nr. Drin R.; tr. centre, cattle breeding, sulphur springs; p. 6,913.
- Debra Markos**, *cap.*, Gojjam prov., Ethiopia; p. approx. 5,000.
- Debrecen**, *t.*, Hungary; 114 m. E. of Budapest; centre of pastoral dist.; fairs; p. (1949) 119,635.
- Decatur**, *t.*, Alabama, U.S.A.; steel, textiles; p. (1950) 19,974.
- Decatur**, *t.*, Georgia, U.S.A.; p. (1950) 21,635.
- Decatur**, *t.*, Ill., U.S.A.; mnfs., coal; p. (1950) 66,269.
- Decazeville**, *t.*, Aveyron, S. France; coal and ironwks.; p. (1946) 12,138.
- Deccan**, The, gr. upland of S. India, bounded by the Narbada and Kistna Rs.
- Dee**, *R.*, N. Wales and Cheshire; length 90 m.
- Dee**, *R.*, Aberdeen and Kincardine, Scot.; length 87 m.
- Dee**, *R.*, Kirkcudbright, Scot.; length 38 m.
- Dee**, *R.*, Louth, Ireland; flowing to Dundalk B.; length 20 m.
- Defiance**, *t.*, N.W. Ohio, U.S.A.; light mftg., tr. and agr. centre; p. (1950) 11,265.
- De Funiak Springs**, *t.*, Fla., U.S.A.; in agr. region; turpentine; p. (1950) 3,007.
- Dehiwala** (Mt. Lavinia), *t.*, Ceylon; p. (1946) 56,900.
- Dehra Dun**, *t.*, Uttar Pradesh, India; p. (1951) 144,216.
- Deir-ez-Zor**, *t.*, Syria; on Euphrates R.; on motor route between Damascus and Baghdad; p. 10,000.
- Dej**, *t.*, on Szamos R., Romania; large distillery; p. 15,311.
- Delabole**, *vil.*, Cornwall, Eng.; on N.W. flank of Bodmin Moor; lre. slate quarries.
- Delagoa Bay**, *natural harbour*, Mozambique; Portuguese E. Africa; principal port Lourenco Marques.
- Delatyn**, *t.*, Ukraine, U.S.S.R.; salt, mineral baths; p. 8,815.
- Delaware**, *Atlantic state*, U.S.A.; fruit, grain, mnfs., etc.; cap. Dover; ch. port Wilmington; a. 2,057 sq. m.; p. (1950) 318,085.
- Delaware**, *R.*, flows from New York State along the Pennsylvania border, through New Jersey to Delaware Bay; length 350 m.
- Delaware Bay**, *inlet*, Atlantic est., U.S.A.; drowned estuary of R. Delaware, extends 80 m. inland from C. May into heart of highly industri. a. of Philadelphia.
- Delaware**, *c.*, Ohio, U.S.A.; p. (1950) 11,804.
- Delémont**, *t.*, can. Bern, Switzerland; p. 6,393.
- Delft**, *ancient t.*, pt., S. Holland, Netherlands; on Schie R. nr. Rotterdam; butter and cheese mart; earthenware mnfs.; p. (1951) 66,067.
- Delftshaven**, *t.*, on Maas, R., Netherlands; sub. of Rotterdam.
- Delhi**, *c. cap.*, Indian Union; constituted a province (a. 574 sq. m.), October 1st, 1912, out of Punjab; seat of government; cotton mnfs. and other impt. industries; ancient cap. of Mogul Empire; (of prov.) (1951) 1,743,992; (of c.) (1951) 914,790.
- Delitzsch**, *t.*, Saxony, Germany; 16 m. E. of Halle p. 15,000.
- Delmenhorst**, *t.*, Germany; nr. Bremen; jute, woollens, linoleum; p. 24,500.

- Delphi, N. of Chalcis, in Euboea, Greece; famous for Delphic oracle on Mt. Parnassus.
- Del Rio, *spt.*, Texas, U.S.A.; mkt. for agr. area, grapes; exports wool, sheep; p. (1950) 14,211.
- Demavend, *mtn.*, 17,604 ft.; highest peak, Elburz Mtns., N. Persia, extinct volcano.
- Demerara, *co.*, Brit. Guiana; between Essequibo and Demerara Rs.; exports sugar, molasses, rum; p. (1946) 220,639.
- Demirhisar, *t.*, Macedonia, Greece; p. (1940) 8,100.
- Demirkapu, "The Iron Gate," rocky defile, through which the Danube rushes, in the Transylvanian Alps.
- Demmin, *t.*, Mecklenburg, Germany; nr. Stralsund; iron, textiles; p. 14,283.
- Demonte, *fortfd. t.*, Italy; on Stora R.; lead mines; p. 3,350.
- Denain, *t.*, Nord, N. France; nr. Douai; coal; p. (1946) 24,908.
- Denbigh, *co.*, Wales; sheep, dairying, coal, slate, quarrying; a. 669 sq. m.; p. (1951) 170,699.
- Denbigh, *mun. bor.*, *co. t.*, Denbigh, N. Wales; dairying, slate; in Vale of Clwyd, 10 m. S. of Rhyl; p. (1951) 8,127.

- Futuna and Alofi, Is.,** S. of Wallis Is., dependency of Fr. Col. of New Caledonia; p. about 2,000.
- Fuyu, t.,** Manchuria; on Sungari R.; agr.; p. 57,065.
- Fyde, rur. dist., geographical sub-region,** W. Lancashire, Eng.; extends along W. est. between estuaries of Ribble and Wyre; low, flat plain behind coastal sand dunes, covered

by very fertile glacial deposits; intensively cultivated where drained, grain, vegetables; impt. pig and poultry rearing dist.; ch. t., Blackpool, famous holiday resort; p. (rur. Dist., 1951) 16,219.

Fyn, *second largest I.*, Denmark; in the Baltic Sea; a. 1,320 sq. m.; cap. Odense.

Fyne, *loch* on Argyll est. W. Scot.; an arm of F. of Clyde; length 40 m.

Fyvie, *par.*, Aberdeen, Scot.; on E. Ythan; p. (1951) 3,006.

Fyzabad, *t.*, Uttar Pradesh, India; sugar; p. 55,215.

## G

Gabes, *spt.*, Tunisia; on G. of Gabes, 200 m. S. of Tunis; dates, henna, wool; p. 22,512.

Gabun, *terr.*, Fr. Equatorial Africa; cap. Libreville; ivory, ebony, palm oil, etc.; a. 92,218 sq. m.; p. (estd. 1946) 422,500 (inc. 1,517 whites).

Gadag, *t.*, Bombay, India; cotton and silk weaving; p. 25,000.

Gadsden, *industl. t.*, Ala., U.S.A.; cotton, cars, coal, iron steel; p. (1950) 55,725.

Gaeta, *spt.*, fort, Caserta, Italy; 40 m. N.W. of Naples; the ancient Caietae Portus; cath.; p. 22,882.

Gaffney, *t.*, S.C., U.S.A.; limestone, textiles; p. (1950) 8,123.

Gaïsa, *t.*, Tunisia; phosphates; p. 11,320.

Gagny, *commune*, Seine-et-Oise, France; light industries; p. (1946) 13,495.

Gallac, *t.*, Tarn, France; noted for wines; p. 7,034.

Gaillard Cut, *excavated channel*, Panama Canal Zone; carries Panama Canal through Culebra Mtn. from L. Gatun to Pac. Oc.; length 7 m.

Gainesville, *t.*, Fla., U.S.A.; p. (1950) 26,681.

Gainesville, *t.*, Ga., U.S.A.; p. (1950) 11,936.

Gainesville, *t.*, Texas, U.S.A.; p. (1950) 11,246.

Gainsborough, *mkt. t. urb. dist.*, Lincs., Eng.; on R. Trent, 15 m. N.W. of Lincoln; engineering, farm implements.

Gairdner, *L.*, S. Australia; 130 m. long, 23 m. broad.

Galápagos, *volcanic Is.*, Pac. Oc.; 600 m. W. Ecuador; administered by Ecuador; peculiar fauna and flora; guano; a. 2,868 sq. m.; p. 1,000.

Galashiels, *burgh*, Selkirk, Scot.; on Gala Water, 2 m. above confluence with R. Tweed; tweeds, woollens; p. (1951) 12,496.

Galati, *Black Sea port*, Romania, on Danube R.; grain trade, timber; p. 93,229.

Galatina, *t.*, Apulia, Italy; p. 20,300.

Galena, *t.*, Kan., U.S.A.; lead; p. (1950) 4,029.

Galena, *t.*, Ill., U.S.A.; lead, zinc, marble, granite; p. (1950) 4,648.

Galesburg, *t.*, Ill., U.S.A.; engineering; p. (1950) 31,425.

Galicja, *former Austrian prov.*, Polish 1918-39, since 1939 E. part transferred to Ukrainian S.S.R. and W. remaining Polish (provs. Krakow and Rzeszów); mountainous; agr., paper, pottery, leather.

Galicja, *old prov.*, N.W. Spain; now forming provs. of La Coruña, Lugo, Orense, and Pontevedra; mountainous; dairying; mining, lead, copper, iron; p. 2,200,000.

Galilee, *N. div.* of Palestine in Roman period, containing Capernaum, Nazareth.

Galilee, *Sea* of (formerly Sea of Chinnereth, L. of Gennesaret), 13 m. long; greatest width 7 m., 686 ft. below sea-level.

Gallion, *t.*, Ohio, U.S.A.; mftg.; rly. centre; p. (1950) 9,952.

Galla and Sidamo, *prov.*, Ethiopia.

Gallarata, *commune*, Lombardy, N. Italy; cotton weaving; p. 24,505.

Galle, *spt.*, Ceylon; on S.W. coast; extensive trade in tea, coconut oil; p. (1946) 49,000.

Galleana, *mkt. t.*, Leon Prov., Mexico; at foot of Sierra Madre Oriental, 120 m. S. of Monterrey; focus of trade between tropical lowlands and high plateau.

Gallego, *R.*, N.E. Spain; rises in Pyrenees, flows S. to R. Ebro at Zaragoza; river provides water for irrigation around Zaragoza; valley used by main railway across Pyrenees from Pau (France) to Zaragoza; length 110 m.

Gallegos, *t.*, cap., Santa Cruz terr., Argentina; p. 7,003.

Gallipoli, *spt.*, Italy; on E. shore G. of Taranto; p. 12,200.

Gallipoli, *see* Galliboli.

Gallipolis, *t.*, Ohio, U.S.A.; p. (1950) 7,871.

Gällivare, *t.*, N. Sweden; inside Arctic Circle, 120 m. N.W. of Luleå; iron ore; p. 21,666.

Galloway, *dist.*, S.W. Scot.; including the cos. of Wigton and Kirkcudbright.

Galloway, *Mull* of, extreme S.W. point of Scot.

Gallup, *t.*, N.M., U.S.A.; coal, wool, sheep, cattle rearing; p. (1950) 9,133.

Galston, *burgh*, Ayr, Scot.; on R. Irvine, nr. Kilmarnock; coal; p. (1951) 4,560.

Galt, *t.*, Ontario, Canada; mnfs.; p. 15,346.

Galty Mtns., Tipperary, Ireland; alt. 3,000 ft.

Galveston, *spt.*, Texas, U.S.A.; on I. in G. of Mexico; great cotton port; mills, foundries; p. (1950) 66,568.

Galway, *co.*, Galway Bay, Connacht, Ireland; fishery, cattle, marble quarrying; a. 2,452 sq. m.; (1951) 160,124.

Galway, *t.*, cap., Galway, Ireland; p. (1946) 20,437.

Gambela, *tr. stn.*, leased to Anglo-Egyptian Sudan by Ethiopia; p. 15,013.

Gambia, *Brit. Col. and Protectorate*, W. Africa; narrow terr., average 20 m. wide, extends 200 m. inland astride R. Gambia; hot all year, summer rain; savannah grassland; ground-nuts, palm-kernels, bees-wax, hides; cap. Bathurst; a. 96 sq. m. (col.), 4,005 sq. m. (protectorate); p. (1951) col. 27,297, Protectorate, 252,389.

Gambia, *R.*, Fr. W. Africa and Gambia Col. and Protectorate; rises in Futa Jallon Plateau, flows N. and W. into Atl. Oc. at Bathurst; forms main means of communication through Gambia Protectorate.

Gananogue, *t.*, Ontario, Canada; p. 4,044.

Gander, *airport*, Newfoundland, Canada; p. (1951) 3,956.

Gandia, *t.*, Valencia, Spain; p. 19,975.

Ganges, *gr. sacred R.*, India; rises in Himalayas and flows to Bay of Bengal, by several delta mouths, on one of which stands Calcutta. Delta very fertile and densely populated. Navigable for large ships from Allahabad; length 1,500 m.

Gangpur, *st.*, N.E. Indian Union; agr., rice; a. 2,477 sq. m.; p. (1941) 398,771.

Ganjam, *t.*, Orissa, India; S.W. of Cuttack; p. 5,100.

Gao, *t.*, Fr. W. Africa; p. 9,000.

Gap, *c.* Hautes Alpes, S.E. France; silk and other textiles; p. (1946) 16,371.

Gard, *Mediterranean dep.*, France; cap., Nîmes; vines, olives, sericulture; a. 2,270 sq. m.; p. (1946) 393,279.

Garda, *L.*, between Lombardy and Venezia, Italy; a. 143 sq. m.; greatest depth, 1,135 ft.

Garden City, *t.*, N.Y., U.S.A.; p. (1950) 14,486.

Gardena, *t.*, S.W. Cal., U.S.A.; mkt. gardening; p. (1950) 14,405.

Gardiner, *t.*, Me., U.S.A.; p. (1950) 6,649.

Gardner, *t.*, Mass., U.S.A.; chair mftg.; p. (1950) 19,551.

Garelochhead, *vil.*, Dunbarton, Scot.; summer resort; p. 1,300.

Garfield, *t.*, N.J., U.S.A.; p. (1950) 27,550.

Garfield Heights, *t.*, Ohio, U.S.A.; iron, steel, oil refineries, abrasives; p. (1950) 21,662.

Garhwal, *dist.*, Uttar Pradesh, India; on S. slopes of Himalayas; forested; tea, grain, coarse cloth; a. 5,812 sq. m.; p. (1941) 485,000.

Garret, *t.*, W. Java, Indonesia; mtn. resort; p. 24,219.

Garó Hills, *mountainous dist.*, Assam, India; a. 3,140 sq. m.; dense forests; p. 180,000.

Garonne, *R.*, S.W. France; rises at foot of Mt. Maladetta (Pyrenees), and enters the Gironde estuary 20 m. below Bordeaux; length 350 m.

Garonne, *Haute, dep.*, S. France; a. 2,453 sq. m.; p. (1946) 512,260.

Garrigue, *region*, Languedoc, S. France; low limestone hills, run N.E. to S.W., W. of Rhône delta; semi-arid; scanty vegetation; winter pasture for sheep, olives; Montpellier, Nîmes located on S. flank.

Garston, *spt.*, Mersey estuary, Lancs, Eng.; docks; p. 28,000.

Gary, *t.*, Ind., U.S.A.; at S. end of L. Michigan; steel, tin-plate; p. (1950) 133,911.

Gas City, *t.*, Ind., U.S.A.; glass; p. (1950) 3,787.

Gascony, *ancient prov., duchy*, S.W. France.

- Gaspé, *peninsula*, Quebec, Canada; on S. side of St. Lawrence.
- Gastein, *t.*, Salzburg, Austria; mineral springs.
- Gastonia, *c.*, N. Carolina, U.S.A.; p. (1950) 23,069.
- Gateshead, *t.*, *co. bor.*, Durham, Eng.; on R. Tyne, opposite Newcastle; shipbuilding, iron, chemicals; p. (1951) 115,017.
- Gatesville, *t.*, Texas, U.S.A.; cotton processing; p. (1950) 3,856.
- Gatineau, *R.*, Canada; trib. of Ottawa R., which it joins nr. Ottawa; length 300 m.
- Gatooma, *t.*, S. Rhodesia; gold; p. 2,422.
- Gatun, artificial L., Panama Canal Zone, Central America; passed through by Panama Canal; alt. 40 ft. above Caribbean Sea, a. (approx.) 250 sq. m.
- Gauhati, *t.*, Assam, India; silk, cotton, lace; p. 17,000.
- Gauri-Sankar, *mtn.* in Himalayas; 35 m. W. of Mt. Everest; alt. 23,440 ft.
- Gävle, *spt.*, Sweden; textiles, sail-cloth; exports wood-pulp; p. (1950) 46,894.
- Gävleborg, *co.*, Sweden; ch. *t.*, Gävle; a. 7,610 sq. m.; p. (1950) 285,024.
- Gawler, *t.*, S. Australia; flour, iron foundries; p. 4,427. [133,700.]
- Gaya, *t.*, Bihar, India; cottons, silks; p. (1951)
- Gaza, *spt.*, Israel; exports cereals, wool; p. (1946) 37,820.
- Gaziantep, *t.*, Turkey; S.W. of Malatya; p. (1945) 62,873.
- Gdansk, *prov. (voivodship)*, Poland; ch. *t.* Gdansk (Danzig); a. 4,290 sq. m.; p. (estd. 1950) 898,939.

- Graz, t., Austria; on R. Mur; machinery, iron and steel, rly. wks.; p. (1951) 226,271.
- Great Altai, *range of mtns.*, lying mainly in outer Mongolia but also in Western Siberia.
- Great Atlas, *mtns.*, N.W. Africa; alt. 7,000 ft.
- Great Australian Basin, *artesian basin*, Australia; underlies plains of S.W. Queensland, N.W. New South Wales, N.E. of S. Australia; water supply used on sheep-farms, cattle-ranches, in area from Normanton in N. to Kenmare in S., Oodnadatta in E. to Roma in E.; a. 570,000 sq. m.
- Great Australian Bight, *wide inlet*, S. of Australia, between C. Arid and Port Whidbey; 850 m.
- Great Barrier Reef, *coral reef barrier*, off N.E. cst. of Australia; 1,000 m. long, 75-100 m. from coast.
- Great Barrington, t., Mass., U.S.A.; summer resort; p. (1950) 3,913.
- Great Basin, *high plateau region* between the Wasatch and Sierra Nevada Mtns., U.S.A.; includes most of Nev., parts of Utah, Cal., Idaho, Ore., Wyo.; inland drainage centre Great Salt Lake; a. 210,000 sq. m.; much desert; sparse population.
- Great Bear Lake, on the Arctic Circle, in N.W. Terr., Canada, over 150 m. long; a. 14,000 sq. m.; outlet through Great Bear R. to Mackenzie R.; on E. shore radium.
- Great Belt, *strait*, separating I. of Fyn from Zealand, Denmark.
- Great Britain, *see* England, Scotland, Wales, Britain.
- Great Dividing Range, *mtn. system*, E. Australia; extends, under different local names, from Queensland to Victoria and separates E. est. plains from interior; reaches max. alt. in Mt. Kosciusko, (7,328 ft.) in Australian Alps, on bdy. between Victoria and New South Wales.
- Great Falls, t., Montana, U.S.A.; on Missouri R.; wool; gold, silver; lead and copper smelting; p. (1950) 39,214.
- Great Fish R., C. of Good Hope, S. Africa.
- Great Fisher Bank, *submarine sandbank* in N. Sea; 200 m. E. of Aberdeen, 100 m. S.W. of St. Vanger; valuable fishing-ground; depth of water, from 25 to 40 fathoms.
- Great Gable, *mtn.*, Cumberland, Eng.; alt. 2,949 ft.
- Great Grimsby, *see* Grimsby.
- Great Harwood, t., *urb. dist.*, Lancs, Eng.; 5 m. N.E. of Blackburn; cotton weaving, engineering; p. (1951) 10,738.
- Great Inagua, I., one of the Bahama Is., West Indies; p. 890.
- Great Karroo, C. of Good Hope, U. of S. Africa; high plateau; ostrich farming.
- Great Lakes, N. America; comprising Ls. Superior, Michigan, Huron, Erie, Ontario; frozen 4 or 5 months in winter; enormous L. traffic in cereals, iron, coal, etc.; a. 96,000 sq. m.
- Great Makarikari, Bechuanaland Protectorate, South Africa; salt pan.
- Great Namaqualand, S. region of S.W. Africa.
- Great Ormes Head, *promontory*, N. Wales; nr. Llanduduo.
- Great Plains, *lowland area* of central N. America, extending E. from Rocky Mtns. and S. from Mackenzie to S. Texas.
- Great St. Bernard, *pass*, Switzerland; 8,111 ft. over Pennine Alps; hospice with St. Bernard dogs.
- Great Salt Lake, Utah, U.S.A.; in the Great Basin plateau of N. America; 90 m. long; a. over 2,000 sq. m.; alt. 4,218 ft.; receives Bear, Jordan and Beaver Rs.; no outlet.
- Great Sandy Desert, N. part, W. Australia.
- Great Slave Lake, N.W. Terr., Canada; length 300 m.; greatest breadth 50 m., outlet Mackenzie R.
- Great Slave R., Canada, flowing between L. Athabaska and the Great Slave L.
- Great Smoky Mtns., Tenn., U.S.A.; with Blue Ridge Mtns. form E. zone of Appalachian Mtn. system; rise to alt. over 6,000 ft.; largely preserved as National Park.
- Great Yarmouth, *see* Yarmouth, Great.
- Greater Antilles Is., W. Indies.
- Greece, *kingdom*, S. part of Balkan Peninsula, bounded on N. by Albania, Yugoslavia and Bulgaria, on W. and S. by the Mediterranean, and on the E. by the Aegean Sea, and including islands in the Mediterranean, Aegean, and Ionian Seas; cap. Athens; agr.: cereals, tobacco, currants, vines, fruit; sheep, goats, cattle; minerals, iron, lead, magnesite, lignite; mnfs.: olive oil, wine, textiles, chemicals; a. 51,182 sq. m.; p. (1951) 7,603,599.
- Greeley, t., Colorado, U.S.A.; nr. Denver, site of st. college of education; lumber, flour; p. (1950) 20,354.
- Green Bay, t., Wisconsin, U.S.A.; trade in timber, flour, etc., paper, coal; p. (1950) 52,735.
- Greencastle, t., Londonderry, N. Ireland; on Loch Foyle.
- Greenfield, t., Mass., U.S.A.; p. (1950) 15,075.
- Greenford, *sub.* of London, W. Middx., Eng.
- Greenhithe, Thames-side, nr. Dartford, Kent, Eng.
- Greenland, I., between Arctic Ocean and Baffin Bay; lofty ice-capped plateau; peopled by coastal settlements of Eskimos; whale oil, seal skins; U.S. base at Thule; part of Danish kingdom; cap. Godthaab; a. 840,000 sq. m., of which 708,000 sq. m. are under a permanent ice-cap; p. (1945) 21,412.
- Greenlaw, t., Berwick, Scot.
- Green Mtns., Vermont section of Appalachian mtns.; highest peak, alt. 4,430 ft.
- Greenock, *burgh*, Renfrew, Scot.; on S. shore of Firth of Clyde, 20 m. W. of Glasgow; ship-building and sugar-refining; p. (1951) 76,299.
